What Do Farmers Need Most?

Is It Leadership, Business Ability, System, or Confidence in the Future?

PERSONALLY I think we farmers are fools and that I, being one, have a host of companions.

This is a dairy section with about three hundred farmers contributory. Possibly three dairymen, or 1 per cent of the numbers, are making any money at all. Cows, cows, cows everywhere. Most of them are eating their heads off—a majority of them not paying their owners one cent profit for the year, just eating good hay, excellent silage and forty dollar grain.

One of the most successful cheese makers in this whole section has often told me that the dairy farmer should reduce his dairy to where each cow would give at least 7,000 lbs. of milk per year or ten months lactation period. This man is rich. He has no ax to grind. In addition he states that the dairy farmer should stop buying fancy mixed, high protien feeds at from \$35 to \$50 per ton.

One of the best feed men in this county tells me that the farmer is a simpleton when he buys high-priced feeds for his cows when the price of milk is where it is. In my humble opinion both cheese maker and feed man are correct. We farmers are a queer combination. We believe we are independent. We are not. We believe we are business men. Most of us know absolutely nothing about business.

A merchant in any line knows what his goods of every variety costs to a cent. He adds a fair (or an unfair) profit and sells it to his customers at his price. Do you, my fellow-farmers, know how much it costs to plow an acre of land, to harrow or fit it, to drill it or plant it, to harvest or dig it? Do you know what it costs to put grass seed and clover on one acre or ten, or what it costs to produce a ton of hay or of silage or a bushel of potatoes or a dozen of eggs? No! A vast majority of us do not know and we are too bull-headed to try to learn.

And what is the result? It is this: When we come to market with our products, be they what they may, we are at a great disadvantage. Our question, our national foolish and simple question is: What are you paying now, for pork, wheat, oats, corn and all grains; for potatoes, cabbage, turnips or squash; for milk, butter, cheese, eggs; for hay, straw or fresh June peas? What are you paying now, for my product and for yours? Ye Gods! are we independent? Are we business men?

The average farmer is the back-bone of this United States to-day. The crying need of this doubtful hour for us farmers is *Leaders*. Paid or unpaid men of ability in each town. Leaders that can give black-board talks on subjects that are directly or indirectly connected with your job and mine. Leaders that will dig into political questions and give us the "straight" of it in an interesting and unbiased way. Leaders that will go into the matter of local costs so that you will and I will know how much it really does cost *locally* to produce a pound of pork or a bushel of beans.

Josh Billings says "No one has ever busted forth into print 'bout how much money they is in farmin' cause they ain't no sech animal." A recent lengthy magazine article states that "there is nothing like an acre of cherries to pay the mortgage on a dairy farmer." Ain't it the truth? I recently "heard" a man say that it was no wonder that most everyone except a farmer was prospering because they had forty million

fool farmers to "pick on." Ain't it the truth?

This is written in the interest of farmers everywhere by One of You.—Gouverneur, N. Y.

In the Rut and Out with Legumes

IN the issue of American Agriculturist of October 21, E. H. Burson, Monroe County, N. Y., gives an interesting example of "getting out of the old ruts." In the issue of December 16, H. E. Cox, Monroe County, N. Y. replies in another very able article. Both these articles have a lot of very sound reasoning and deserve the careful reading and study of every American Agriculturist reader.

I really like Mr. Cox's statement which runs as follows: "The old rut or rotation farming has proved in all history to be the foundation of agriculture." Also the statement concerning the "plunger." Plungers rarely get far. We need only look into the

secutive seasons on the same ground with the result that we followed it with a bumper crop of mammoth clover in 1919. Besides this we raised soy beans for both seed and hay with results that made others stop and take notice. This experience alone would make a large article itself. Beginning with 1916 we raised soy beans each season except 1921 when we omitted them because of ill health.

Where does the rut come in some may wonder as they read the foregoing? Well, we were in the same rut others were so far as rotations were concerned. We saw that to succeed and to make our ground bring results we had to get out of the rut and change crops. Due to what we learned of the value of legumes in building up soil fertility, we adopted a four-year rotation as follows: corn and soy beans—soy beans or oats depending on soil—hairy vetch and rye or wheat, depending on soil—clover and timothy. This followed for a few years brought us out of

the rut and brought the soil to a much higher state of fertility. One of the best crops of wheat we ever raised followed soy beans on a piece of ground that brought no good pastures before soy beans were raised on it for two successive seasons—first with corn and next for hay. We might write indefinitely of the change and the gratifying results, but it is needless. We have stated the case and the point is quite clear.

To return to Mr. Cox's last paragraph, he is right. If your system is bringing results—be slow to adopt a change. Some ruts are good and profitable ruts. Others spell loss and need a radical jerking out of their tracks. I just now recall a statement made to me last spring by my friend McQueen. The question was put to him during the course of an address by him, of what would happen if everybody were to stop raising wheat and oats,

and where would bread come from, etc. McQueen's reply was short and to the point, as follows: "If everybody accepted Christ as their Saviour, there would be no further work for Billy Sunday and Gypsy Smith and others. Likewise in raising legumes. Not all will change. Not all need to change, but many more would change to legumes."

The way to view the matter is this: If the system and rotation you follow is bringing profitable returns and your soil remains fertile, "go easy" as to a change. If, on the other hand, your system and rotation are spelling loss to you, as it did to us, then make a radical change and do not delay. One thing is needful, however, which is exercising good sound judgment and reasoning power while working the change.—WARNER E. FARVER, Holmes Co., Ohio.

Future Must Be Bright

IN a recent issue of American Agriculturist, I noted a request for opinions on the "future of farming." As things look at times, one almost feels that the "future" of farming is like snakes in Ireland—there "ain't" any! However, my husband and I, with two young children, are going on a farm on March 1, after some time working for other farmers, and we have a great deal of faith and hope that farm life is going to offer us some advantages impossible to obtain elsewhere, in return for hard work and inter-

(Continued on page 13)

This Is Your Page

FARM people are doing the best and sanest thinking that is being done in America to-day. That is the chief reason why we welcome the large numbers of letters that come to us in every mail. Let them come. We publish all that we have room for, but do not be discouraged if you do not see some of yours in print, for these letters from farm people whether published or not have great influence on the entire editorial policy of this paper. We will not publish your name if you do not wish it, but be sure to sign your letters.

Remember that the letters express all sides of the problem and that we do not necessarily agree with all of the arguments. Remember also that two short letters are better than one long one, and keep in mind the story of Finnegan, the section boss, who insisted on writing too long reports on everything that happened on his section. Finally he got emphatic orders from headquarters that he must boil his reports down, especially on unimportant things. A few days later there was a bad wreck on Finnegan's section, and after things were straightened out he reported to headquarters as follows: "Off agin, on agin, gone agin, Finigin."—THE EDITOR.

many poultry ventures that paid only in the imagination and on paper during the past few years.

I fully agree with Mr. Cox concerning diversified farming. If diversified farming were to be discontinued and every farmer go to specializing, everything in the farming game would go to the dogs in a short time.

Now, permit us to give a little personal experience about getting out of a rut.

Some few years ago it fell to our lot to take charge of a piece of land which had been pretty well run-down. The trouble here was that diversified farming and a certain rotation had been carried too far. In fact, the rotation was so long it became monotonous and crops refused to do any good. We tried the thread-bare rotation of corn-oats-wheat-clover-timothy-timothy-pasture, as practiced by other farmers of this section. A few had already shortened rotations to about five or six years, but it did very little good. We found that we could get no clover started and very little else. We got discouraged and felt like quitting.

About this time our good friend Jake McQueen of Tuscarawas County, Ohio, was boosting soy beans and having vetch as the remedy for land, run-down land like ours. We became interested and paid him a visit at his famous Rigby Farm. This visit led to more and to our trying hairy vetch on our very poorest ground. The results were very satisfactory. Sufficient to say that the hairy vetch was raised for several con-

Health Is Fundamental To Happiness

A Strong Body—A Necessary Team-Mate of a Trained Mind

EVERY woman has many reasons for loving and caring for her home. One of the most important of these is that the home is the nest where she cherishes her children until they finally tumble over the edge into the wide world. But little birds become fledglings before they leave the nest forever, and little children become school children before they grow up and found homes of their own. If the mother birds could shoo away every marauding dog and cat and boy while the fledglings were testing their wings, how happy they would be! And yet what small thought human fathers and mothers give to the schools where their children spend a large part of their time.

Health and Happiness! They should be the natural right of every child. The school laws in this country guarantee to our children at least an elementary education, but as one great educator has said "What shall it profit a child if he gain the whole world of knowledge and lose his health?" What can you and you and you do to help your school give your children and your neighbors' children strong bodies as well as trained minds? Well, there are a great many ways, and the Child Health Organization of America has been helping both city and country mothers to apply them. This organization has proved that children really can be as enthusiastic about health as about games, races, and dolls.

The first step in introducing a health program into your school is to visit the school. It works on the same principle as Aunt Martha's recipe for making squirrel pie:—"First you catch your squirrel!"

Three thousand women throughout New York State have already done this initial thing. To give them an idea of the questions to ask and the conditions to notice, the League of Women Voters gave each visitor a set of questions made out from suggestions of Dr. S. Josephine Baker, the noted child health specialist.

This army of mothers was eager to start out with the survey, because they felt that country children had as much right to good health conditions as those of congested New York City, which Dr. Baker has helped make a safer place for the health of children than many farming communities.

So three thousand women, armed with their list of questions, visited one-third of all the schoolhouses in the State. Some of the schools were in their own district and some in neighboring districts. One woman exclaimed when she inspected the building in her own community, "I taught in this school twenty-seven years ago; it is now, except for a few minor improvements, practically unchanged."

Before the survey began, the school authorities were convinced that the women were really not out to find fault with the schoolroom, but to help make it the best place for their children. The teachers therefore, welcomed their visitors and were happy to answer the questions. For many years they had wanted the mothers and fathers to come to the schoolroom and assist them. Now they saw the beginning of interest on the part of the community.

Checking Up on Health Conditions

Direct questions were asked about all sorts of health precautions. Some examples were: "How often are physical examinations made, and are reports sent to the parents?" "Is there a school nurse and does she visit the children in their homes?" "Are there scales in the school and how often are the children weighed?" "Is the schoolroom clean and who cleans it?"

The women were surprised to find that in a very large proportion of rural schools no physical examination was made. In others, only a very few minutes was given to each child. One teacher confessed that the doctor lifted her pupils and then guessed the weight. In another school the "examination" was made over the telephone. Even in cases of thorough examination, the investigators found, parents sometimes neglected to remedy defects which the doctor reported, and so the doctor naturally thought time had been wasted.

These mothers soon realized that physical handicaps of adult life such as indigestion, deafness, poor eyesight and bad teeth could be overcome through a careful physical examination in the schools and the right kind of follow-up to get rid of the defects that were discovered.

Making Children Want Health

The teaching of good health habits was found to be a new study in many of the schools. This was a problem which puzzled some teachers, who had been told to teach the pupils the names of the muscles and of the teeth, molar, pre-molar and so on, ad infinitum. They were now trying to interest children in health habits such as drinking plenty of milk, cleaning the teeth and going to bed early; but in some rural schools the teacher could not see the value of teaching the importance of washing the hands before eating, for instance, when the schools had no water supply, and during the winter, water could not even be carried from a neighbor's well. On the other hand, in many cases, teachers were making heroic progress against heavy odds in rousing the desire for health among their children.

The answers to the questions obtained by these three thousand women have been published, and any mother or father may obtain a copy through the New York State League of Women Voters, Grand Central

Market Service

THE farmer's biggest job is not to grow more, but to get more for what he does grow. American Agriculturist's biggest job is to help farmers to do this. We are, therefore, establishing a special Market Service Department. We do not expect to take the place of cooperative organizations, but we ourselves are a great organization of over 115,000 farmers and we think that we can help.

What are your greatest market difficulties? Are you selling large quantities of eggs? If so, are you getting top prices? How about the hay that you sell off the farm, the veal calf, the butter and the apples?

Our market expert, has been working in New York City's great markets for years. He knows how to get the best results from them. He is at your service and when he needs more help we will add to his staff. Pick out your most difficult marketing problem and tell us all about it, addressing your letter to the Market Service Department of American Agriculturist.

The Need of Better Grading

IN a recent campaign to standardize eggs in Missouri, the United States Department of Agriculture examined 95 carloads, each containing 400 cases with a total of 38,150 dozen. The survey showed that 54 per cent were classed as "No. 2," 26 per cent as "No. 1" and only 5 per cent as "extra." The rest were classed as "dirty," "cracks" and "rots." Were these figures reversed so that at least 50 per cent of the eggs could be classed as "No. 1" it would save the farmers of Missouri over a million dollars. Similar figures could be obtained from any State. The sad fact about it is that the hen does not lay a "rot" nor even a "No. 1." She is satisfied only with an "extra." The re-

sponsibility for poor quality eggs rests solely with man. Nor is the loss all apparent in these figures. If the consumer could always be sure of fresh eggs, the increased consumption would bring millions more in returns to poultrymen.

A representative of the New York Department of Farms and Markets told us recently of the large number of mixed crates of chickens that come into the New York market. For instance a crate may often contain Plymouth Rocks, Leghorns and one or two other breeds, with the result that the buyer insists and usually succeeds in buying the whole crate on the basis of the poorer product in the crate—the Leghorn.

These conditions in the poultry market are examples of the big job farmers and farm organizations have yet ahead of them in the better grading and standardization of farm products. After all, an artificial price cannot be long maintained by the best cooperative in the world and the greatest chance of success in the markets by either individuals or organizations is to properly produce and grade high quality products to suit the demands of modern consumers.

More Than Credit Needed

ONE would think to read the newspapers and the resolutions passed at many meetings that if farmers could secure plenty of credit, good times would come a running and all of their problems would be solved.

As a matter of fact, too much credit is a curse for farmers or for anyone else. If it had not been quite so easy, particularly for western farmers, to borrow money during and after the war, they would not be having so much trouble to-day. They obtained credit too easily, paid too high prices for farms, bought too much equipment and too many automobiles, with the result that they could not hope to pay back what they borrowed and many had to lose what they had paid down.

Without doubt, there is need for some kind of a plan that will extend to farmers reasonable credit for long time loans which will enable them to hold products for months and to raise cattle over a period of years. Congressman Sidney Anderson has introduced a bill along this line which we hope will be passed. But let no one fool himself into thinking that credit facilities alone will solve the hard times on the farm.

A Highly Skilled Business

A RECENT press release of the United States Department of Agriculture tells of the work done by the Department during the past year to control the spread of dangerous insects of which the farmers of the past generation never heard. Among these are the Japanese beetle. The Department reports that during the season of 1921, 5,000 of these beetles were removed from the tips of sweet corn in inspecting some 200,000 baskets. Insects injurious to peaches and peach trees are greatly on the increase. It is within the bounds of possibilities that if the European corn borer cannot be controlled, this one insect alone will make it impossible to grow corn with much success in the United States. The citrus growers of Florida and California have to fight constantly dozens of insects. The Mexican bean beetle, the pea aphid, the boll weevil, the gipsy-moth, the pine beetle and the San Jose scale are just a few other insect enemies with which the modern farmer has to contend. He is afflicted with an equally long list of plant and animal diseases and every year sees new weeds establish their sturdy life upon his acres.

Opinion still exists to the effect that should one fail at everything else he can still make

a success at farming. There might have been a time when such an opinion was justified. In the early days of farming, soil was rich and there were few plant or animal enemies to prevent abundant harvests. Then, too, because most of the people were farmers and were the largest consumers of their own products there was no marketing problem.

But always, as a country grows old in agriculture, the problems of the farmer increase. To be successful in agriculture to-day, one must be trained either in school or by hard experience, or by both, in not one but several arts and sciences. The proper care of the dairy itself is one of the most complicated and difficult trades in the world. The control of a thousand and one plant and animal diseases of the farm requires the practical knowledge of a highly trained scientist. The knowledge needed to care for and use modern farm machinery makes of every farmer who can do it, a highly trained mechanic. On top of it all farming of this day, with its requirements of intimate knowledge of markets and business practice, demands a business skill which if applied to other business would surely bring higher returns.

As time goes on the problems of production and marketing are likely to increase instead of diminish. This means more hope for those of the coming generation who train themselves both by education and experience in the skilled trade of farming. And it also means that the ignorant, unskilled and unprogressive farmer will find it more and more difficult to make a living from the land.

Get the Taxes Down

THE biggest economic job in this country to-day is to get the taxes down. Every office seeker should be elected on this issue and every public official's record should be measured by this standard. Taxes, especially farm taxes, are too high and those who are saying so much about helping the farmers, can practice some of their preaching by bending every energy to reducing the farmers' tax burden.

Wars always increase taxes. After the American Civil War, taxes were high for years because the war was followed by a period of wasteful expenditure on the part of National and State Governments. Conditions finally became so bad that there was a general demand for reform, which led to the Civil Service System and to the retirement of those leaders who advocated too large expenditures of public money.

Although the burden of taxes falls heaviest on farmers, the great majority of them are always willing to pay their share to support worthy enterprises or to help win a war. But the war is over and farmers are not willing to pay for useless jobs and unnecessary expenses. It is time for economy, especially in Government expenditures.

The Vision of the Stars

MAY we call especial attention to Mrs. Fountain's poem "The Vision of the Stars," which we are publishing on the opposite page. The poem was read by the author at the recent annual meeting of the Farm Bureau Federation at Syracuse and was received with much applause and favorable comment. We take pleasure in giving it wide circulation among the people for whom it was written.

Mrs. Fountain is herself a farmer's wife, gifted with the unusual ability to describe and express the disappointments, the longings and the hopes of the men and women whose homes dot the thousand lonesome hills and valleys of America. Sorrow will surely come to any nation when bitter poverty and grueling toil shut off from farm people their vision of the stars.

The Vision of the Stars

By Mrs. Cola L. Fountain

SILENT he toils on the homestead farm where his father lived and died,
Keeping his feet in his father's paths with a secret, holy pride,
Around him the hills lie soft and blue and they gently shut him in,
Afar without is the world's fierce rush and its money-maddened din,
And he lives in the quiet of the vale and 'tis pleasant, too, to be
A little King in a little State in his own autocracy.
He knows there are problems to be solved where the hearts of men beat high,
He knows heavy burdens must be borne, but above him curves the sky,
And the bees in the clover drowsily hum, and the fragrant air is warm,
And his work lies here in the sunny fields away from the stress and storm.
Narrow? Yes, true, and content to be as the seasons change and blend,
Busy enlarging his golden hoard—too busy to be a friend.
Yet sometimes there comes—he can't tell how—when the wind sweeps gently along,
Rippling the heads of the hillside wheat—or the birds burst into song,
Something that lifts for a breath his heart and his mind to higher things
Giving him just a fleeting glimpse that even *his* soul has wings,
And he feels, but he wouldn't tell you so—that something his life has lost,
Quiet and peace and comfort he has, but a trifle too high the cost,
And at night when the valley mists close in and he stands at his pasture bars,
He realizes that he has missed youth's vision of the stars.
She stands at her kitchen door, his wife, whom he married long ago,
Quicker in thought and action, she, than the man who toils below,
Keeping her home serene and fair, upholding a standard high
To the children God has given her, while their golden youth slips by,
Knowing full well that the hills that seem a barrier fast to be,
Would open and welcome the best of life, if only she had the key.
Something, somewhere there surely is, to sweeten the country life,
To broaden the mind, quell jealous griefs, and to bring peace out of strife,
Something to show men the way to work in community of soul,
Something to bring them achievement as onward the swift years roll,
And she holds the thought—as she keeps her soul—through all of life's frets and jars,
That the country woman *must not* lose her vision of the stars.

There has risen an army in later years to come to the yeoman's aid,
With wornout soil and with pest and drought it fights on unafraid,
It is followed close by a fine array of women with purpose true,
With courage and loyalty they work—unmeasured the good they do;
They are teaching us how to rear the child to a strength and health complete,
And to household efficiency and skill they are pointing our eager feet.
There's a College that stands on a fair, green hill and it cares for the rural need,
And it offers us sane and helpful thought, worked out in word and deed,
There are men who are working in every line to bring to the farm its due,
With "Cooperate" as their watchword they will strive for a freedom true.
But back of them still in the kitchen door, stands the wife with her face to the hills,
Who waits for the key to unlock the pass to the higher life that thrills;
She wishes her hearthstone to have the best that the wide world gives to-day.
She wishes the countryside to live in harmony by the way,
She longs for the day when her child may learn in the school-house down the road,
The things that will fit him when a man to shoulder his share of the load,
She waits for the time when the church will throw its narrow doors apart,
And teach to all the creed of love and the understanding heart,
She is willing through service to guard and keep her community from harm.
And she asks your aid for these greater tasks—this woman on the farm.
You are working to gain for the farmer the share that is his by right,
And only his voice—united through you—will bring him his power and might;
So toil—for the farmer knows 'tis true that without you he would fall,
So work, for the nation rests on you who have heard the country's call,

And keep, so vivid and clear and keen that nothing its brightness mars,
For the sake of the farmer and his home,
your vision of the stars.

"And his work lies here in the sunny fields away from the stress and storm."

UNADILLA

The Silo of Economy

EVERY dollar put into a Unadilla Silo comes back many times during its long life. Its clever door-fastener safety-ladder makes it possible to preserve the life of a Unadilla indefinitely.

You get at silage easier, put it on the stable level with least effort and make all adjustments in perfect safety.

Successful dairymen praise the Unadilla Silo and buy it a second and third time.

See why the Unadilla is the most economical silo. Write for the big Unadilla catalogue and special discount on early orders.

A Doomed Countryside

A Farm Valley That Will Soon Be a Lake

LAST week I attended a Farm Bureau community meeting at Gilboa, in my own county of Schoharie. The little town is in the valley of the Schoharie River, on the western slope of the Catskill Mountains. The upper reaches of the valley lie remote from

J. VAN WAGENEN, JR.

the rail, and it is preeminently a region where old manners and by-gone customs linger long. Someone has well called it "The Sleepy Hollow of New York." I shall never forget the first time I saw it, for it was under such pleasant, not to say romantic, circumstances. It is some 40 miles from my home by the usual driving route. It was 22 years ago last June, during weather worthy of that glorious month, that I pilgrimaged there in a strange and now extinct sort of vehicle known as a basket phaeton. Said vehicle was deemed quite a stylish equipage when it was purchased in the early 80s. The propelling power was a fat, lazy, short-legged black pony bearing the appropriate name of Topsey. The phaeton and the pony grew old together. We drove them for 20 years and more, until one unhappy morning Topsey was found in the stable with a broken leg, and thus went prematurely out of the world. But she was some pony in her time. When newly overhauled and put into high gear, she was capable of say five miles an hour for not too long a stretch, but half of this was her regular running schedule. She never back-fired, or knocked, or had tire trouble. Her motto was safety first, and she broke no speed laws or traffic regulations.

The Human Birdnest

Behind her in the low, sweet chariot which she drew, was somehow stowed my wife and two small babies and myself, together with the absolutely necessary impedimenta of travel. To the observing wayfarer, as we slowly drifted up the valley, it must have suggested, in the phrase of Corra Harris, a sort of itinerant "human birdnest," so to speak.

We were all of us more than 22 years younger than we are to-day. I have been up and down the valley many times since, but never was the sky so blue and the grass so green and the wooded mountains so altogether lovely as on that halcyon journey in the golden month of June. I cannot be sure as to our hourly mileage, but it was very small.

We slowly meandered up the lovely valley, by leisurely roads, under old trees, past sleepy farmsteads, having frequently by our side the bright gleam of the river, having often in our ears the music of its slipping waters. I love to remember how we passed through the rich, broad acres of Vrooman's Land, overshadowed by the towering, rocky face of Vrooman's Nose. Romance and history lie thick hereabouts, for surely no part of our State suffered more pitifully during the dark and bloody days of the Indian troubles and the Revolutionary War. Here dwelt the men who in those days sent to the Committee of Public Safety at Albany this simple, eloquent, pitiful appeal: "The greatest harvest in the memory of man lies rotting on the ground, and no man dare go into the fields to gather it."

Old Landmarks Along the Way

We negotiated the "tow-path" where the road, then much narrower than now, is carried on a shelf, blasted out of the mountain-side with the river directly beneath, while just beyond is Bouck's Island, ancestral home and seat of John Christopher Bouck, the only genuine, honest-to-goodness Farmer-Governor our State ever knew. Last summer I went to see the old house where he and his fathers dwelt, but the glory has departed, and the hand of

neglect and decay is heavy on the big old farmhouse under the old trees.

At Breakabeen we passed the foundry and machine shop with the great overshot water-wheel beside it, that day half hidden in a white smother of foam as the waters of the Keyser Kill spouted and dashed over it, but the shop is silent, and the wheel has not turned for many years.

At Blenheim we drove through the resounding tunnel of the longest single-span wooden bridge in the world—198 feet between abutments—built 80 years ago by country carpenters who never saw a blue-print or heard of stress or shear, and having for tools chiefly the saw and broad-ax and adz and auger. Surely there were cunning workmen in that time.

So, in due course, we came to Gilboa and dined at the inn, but I cannot remember if "Pop" Peters was then the landlord, as he was for many years thereafter.

I might gossip further about this pleasant pilgrimage, but I must not dream.

Recollections of the Old Village

So last week I came again to Gilboa. The village is old. Long ago it had a tannery, as did all the villages in the valley, but it had a cotton factory also. One day—I think it was in 1869—it began to rain summer showers up creek in the Catskills, and the old Schoharie rose up and went on a rampage. An old man used to tell me how he saw the cotton factory and the cotton bales and a wagon loaded with finished cotton cloth go bobbing down the turbid flood together. That disaster finished the industry. By the way, that same flood undermined the bank of the creek and exposed what is said to be a most remarkable fossil forest, which is just at this time being worked over by the American Museum of Natural History in New York.

Then, about 1890, a fire swept away a good part of the town, and for a day gave them a place in the Associated Press news. The rebuilding was prompt and complete. Ten years ago or so the village had another flutter, when the Delaware and Eastern Railroad came pushing over the hill from Grand Gorge. I was at a Farmers' Institute there that fall, when we could hardly keep audience enough to do business because everybody wanted to go down and watch them get the steam shovel across the creek and up the steep bank into the town. There were big cuts and fills and substantial concrete bridges completed and high trestles against the hillside above the village. Gilboa needed little imagination to see the long coal trains rumble past, for the new road was ambitiously conceived as a shorter cut-off to the anthracite regions. The little town fairly buzzed with activity and anticipation, and then, without warning, the construction gangs went home one night and they never came back. So Gilboa was left with only the memory of great expectations and a right of way.

Doomed to a Watery Grave

But at last the village is put permanently on, or, rather off, the map. New York City, as a great concern should, looks far into the future, and plans for years to be. Her engineers say that it is, relatively speaking, only a short time until she will outgrow her present water supply. So they pitched upon the upper reaches of the Schoharie, and for years have been measuring the daily flow of the river and making deep borings to ascertain the character and depth of the bed-rock foundation. It was a tremendous task that was begun, involving the building of a giant dam that will convert a one-time fertile valley into a mountain lake extending for six miles, and then the diverting of the waters of the river to another watershed through a tunnel more than sixteen miles long.

So to-day the sleepy village has become a roaring construction camp. Just where was formerly the lower end of the long village street, the dam, a great structure of concrete faced ("veneered," as the engineers would say)

New York County Notes

Winter Meetings Are Now the Order of the Day

FROM practically every corner of the State folks report an increase in the number of farm meetings. These meetings not only include the meetings of farmer cooperatives, but institutes and farm schools. The main topic of discussion seems to be the milk problem, according to reports from the various counties. Undoubtedly this winter will determine which way many of the cooperatives will finally head.

In the Northern Counties

Essex Co.—During the last week in November, O. H. Benson, Director of the Junior Achievement Bureau of the Eastern States League, held meetings throughout the county in the interest of boys' and girls' work. The Pomona Grange met in Jay early in December. On December 4 the Guernsey breeders met at Westport and organized a county association. Farmers are much concerned about the fuel problem. The increase in Farm Bureau dues from \$2 to \$5 a year is creating much discussion. Eggs are now bringing 60 cents a dozen, pork 15c a pound dressed. —Mary E. Burdick.

Lewis Co.—Interest seems to be quiet here in Lewis County at present. Farmers are discussing the milk situation to considerable extent. Hay is selling from \$12 to \$13 a ton. Potatoes are bringing 60 cents a bushel. Good creamery butter is 65 cents a pound, with light demand. Farmers are hard pressed for water for their stock. Rain is needed badly at present. —Charles S. Stiles.

St. Lawrence Co.—Gas Engine schools were held the middle of December. New officers were recently elected into the Grange. Milk is the chief topic of conversation among the farmers. Opinions vary; many are not satisfied with the prices. Turkey sold for 60 to 65 cents; eggs are plentiful. The fairly mild weather we have been having has relieved the fuel situation. —H. S. Howard.

In Central New York

Chemung Co.—Farm and Home Bureaus held a joint meeting in Elmira recently when plans were made for 1923. Beekeepers are determined to eliminate foul brood. The tobacco crop is about half bunched. We had about 8 inches of snow for Christmas. Dairy-men in the county feel quite content with the price of \$2.20 per hundred and up, depending on the test. Supervisors of the county have voted \$26,000 for road improvement. The Holstein men met in Elmira on December 18 to plan the coming year's program. One of the subjects that is being most generally discussed by farmers at Grange meetings, is the problem of the rural school. New Grange officers will be installed the second week in January. —C. J. G.

Tioga Co.—"Drives" for financing the County Farm and Home Bureaus, the Home for Aged Ladies and the Red Cross are going on this week. The concrete community hall that has been erected at Cattatonk was recently dedicated with appropriate exercises. Various public officers and prominent citizens supported this movement. There is no question but what this building will add greatly to the life of the community and the surrounding territory. Weather continues mild. We have had some snow during early December, but it disappeared quickly. We certainly need rain, as wells and streams are very low. The biggest problem in this section is a fuel problem. Although most farmers have plenty of wood, the scarcity of labor has compelled them to use coal. —A. N. Drews.

A Doomed Countryside

(Continued from page 6)

with cut-stone towers into the air. Above it all, spring the slender skeleton masts up which the concrete is hoisted and poured off through iron pipes like so much liquid mud. Below the dam, in the valley, has grown up a mushroom town that suggests one of our army cantonments—a sprawling collection of stores, barracks, mess-

halls, machine shops and engineering offices, together with a vast litter of pipes and rods for reinforcing concrete, broken and rusty machinery, and all the debris that accumulate around a great engineering job.

How New York City Works

One is impressed with the thoroughness with which the biggest city in America does its work. For example, where the former roads will be flooded, she has replaced them with splendid boulevards skirting the hillside above high-water mark. The sanitary policing of the whole watershed is a big problem, and every home in that area will be provided at the expense of the city with an approved system of sewage disposal.

The great city even reaches out its strong arm for the maintenance of law and order in this remote village. Up and down the town and throughout the large area controlled by the city ride the Metropolitan Mounted Police. I must say that in appearance at least they make our youthful State Troopers look like jokes. The city police are much older, middle-aged, handsome—I might almost say distinguished looking—men of grave courtesy. They are splendidly mounted and equipped, and they sit their horses like kings. Moreover, they seem to do their work. Our County Judge said to me that he had fully expected the County Courts would be choked with cases of the "assault and battery" type. As a matter of fact, there has been almost nothing of the kind, a remarkable thing when you remember that here is employed a small army of what we usually think of as ignorant, low-grade emigrant labor. Evidently the foreigner instinctively fears and respects authority as personified by "the man on horseback."

Countryside Awaiting Extinction

The whole village and many square miles of the valley is now the property of the City of New York, a rather easy-going landlord, I am told, who continues to allow the former owners to occupy their houses and farms at a rather nominal monthly—not yearly—rental. Of course, no one ever paints a house, or repairs a sidewalk, or nails on a shingle. It is a strange spectacle, this—a town just waiting for final extinction. But some day—it may be two years, it may be longer—the dam will be completed, the woodlands cleared off, the village and farms razed, all sources of pollution cleaned up and disinfected. Then the massive steel gates will slide into place and a mountain lake will blot out the fat valley and bury many fathoms deep the farms where men have made their homes since pre-Revolutionary days, and never again will the Schoharie go slipping down its natural channel to the sea. Then may the Keeper of the Records of the ancient and honorable community of Gilboa write "Finis" and close the book.

There is pathos in all this. Of course, the city has paid—in most cases paid liberally for the tangible things she took. But she did not and could not pay for the associations and loves and memories that cluster around all good homes. There seems to me to be a certain sort of ruthlessness in the legal doctrine of eminent domain, which permits a great city to put forth its hand and wipe from the earth an obscure village in its mountain setting.

Happy is he whom neither wealth or fortune Nor the march of the encroaching city Drives an exile From the hearth of his ancestral homestead.

Some future golden summer day I hope to again journey up the valley until I come to the towering gray rampart of the dam that joins hillside to hillside. And above it the clear water will sparkle and gleam in the sunshine, and the little waves will lap the shores and the tourists rolling along the wide boulevards that skirt it will speak of its beauty, but I—I shall remember the drowned valley as I saw it many years ago, and I shall be a little sorrowful for the folk whom a great city drove from their quiet farms beside the pleasant stream.

FROM A KODAK NEGATIVE

A Kodak for the Farm

It's easy to make pictures the Kodak way, and the resulting prints of livestock, buildings, crops and equipment, whether for purposes of sale or record, are of obvious value.

There's fun with a Kodak for everyone—and growing pleasure in the pictures, but on the farm photography has a practical side that should not be overlooked.

Autographic Kodaks that give you picture, date and title, range in price from \$6.50 up.

Eastman Kodak Company, Rochester, N. Y.

If you wish to invest safely

Buy Federal Farm Loan Bonds

If you have any surplus funds, invest them in Federal Farm Loan Bonds. They will earn you 4½% interest, payable twice yearly. You can sell them at any time if desired, or your banker will gladly accept them as collateral for a loan. There is no safer investment. Your money is secured by the pledge of first mortgages on Eastern farms double the amount of the loans. Prompt payment of principal and interest is guaranteed by all twelve Federal Land Banks. You can buy a Federal Farm Loan Bond for as little as \$40.00. Write for particulars.

The Cabbage Market Methods Must Change to Stabilize the Supply

SEVERAL weeks ago the bottom dropped right out of the cabbage market, both in New York City and at loading points. Growers were unable to realize more than \$2 or \$3 per ton.

PAUL WORK

Of course, few sales were made at such figures, and dealers shipped but little when it was apparent that it would find a market overloaded and quoting at but \$8 or \$10 per ton, or even less. With the supply thus cut off, prices began to pick up, and at the time this is written quotations in New York lie between \$20 and \$25. The slump came at about the time when cabbage had to be taken from the field or lost, with the result that a good deal was unharvested. Thus was some of the 1922 bumper crop disposed of, but not moved. The financial condition of the farmers encouraged early sales. Now it appears that prospects are much better for reasonable prices during the coming months—now that comparatively little remains in the hands of producers.

The Same Old Story

The same story has been related many times before, and events will doubtless take the same course many times in the future. Harvest time sees supply at the peak, and any commodity that must be held for later sale tends to pass from weak hands to strong. It is doubtless best for the small producer who cannot or will not thoroughly learn the storage game and provide himself with favorable storage facilities to sell early. Both of these are large undertakings and call for a type of skill that is clearly distinct from the skill necessary to produce well.

The average difference between November and March prices is, to a great extent, taken up in shrinkage, interest, labor and equipment costs, to say nothing of the risk which is accepted and which deserves its reward. Even the fall seller has much to gain through careful study of markets and the development of bargaining ability. Perhaps most important of all is the production of a quality which tends to make buyers come to the seller.

Reports from cabbage sections indicate an increasing tendency for producers, either singly or in groups, to provide storage houses and to be ready to sell at such times as seem most opportune during the winter.

Canners are Well Organized

The New York State Canners' Association, with some 75 concerns and perhaps 125 factories, was able to muster as strong an audience for a State meeting as the 35,000 commercial vegetable growers of the State. At their annual session, recently held in Rochester, they took no uncertain position with regard to the few remaining factories which do not work under fair sanitary conditions. They are enlisting the help of the two State experiment stations in connection with raw product and processing problems. Secretary J. P. Street feels that there is an excellent opportunity for the development of an asparagus canning industry in the State. Little seems to have been said at the meeting about the relations between canner and grower.

Advertising Sauerkraut

It took a good imagination to select the "Old Sauerkraut Barrel" as the basis for a campaign of national advertising. Yet the Saturday Evening Post recently carried a full column layout lauding the virtues of this homely food. It quotes nutrition experts regarding the value of the mineral salts, the vitamins, and the lactic acid ferments which sauerkraut contains. The reader is offered a booklet of information and recipes. The campaign is backed

by the National Kraut Packers' Association.

Thus do the middlemen think more of our commodities than we. Thus do they fight a battle in which we are interested, and most of us are content to believe that our concern ends when we have made delivery at loading station or factory.

Gardeners Hear of Jersey Practices

Not long ago Cornell students who are interested in vegetable production, both regular and winter course, gathered to listen to C. H. Nissley, Extension Specialist for New Jersey. Nissley believes in 5-6-50 home-made Bordeaux for potato and celery blight, as well as other fungous troubles where it fits. High pressure and three nozzles to the row insure thorough work. He believes Bordeaux dust is still in the development stage.

The speaker told of the open market for can-house tomatoes at Swedesboro. Contracts are not common in this section, and the loads are hauled to town to await the pleasure of the buyers. In more than one instance the buyers have offered exceptionally high prices on a morning when the supply was light. The result is heavy picking, and two mornings later they are able to make purchases at their own figure. The manipulation has been as wide as from 18 to 43 cents.

New Jersey Vegetable Gardening Practices

Brookdale, N. J., is a center for horse-radish production. The sets are stored in sand over winter, and are planted nearly horizontally in rows in beds. After they have made part of their growth, the upper part of the root is lifted without disturbing the bottom. The side roots are then rubbed off with a woolen cloth. They are again covered, and the process is repeated some four weeks later. This scheme, of course, greatly increases the cost of production, but it results in a product of exceptional quality and yields frequently reach five to six tons per acre.

Bergen County sweet corn growers have standardized on a few types of this crop, and they have built up a fine market in New York. Their product is distinguished by dark husks and long "streamers," or leaves at the tips of the husks. John Handweg, of this county, has made fine progress in seed improvement. Atlantic County growers are beginning to standardize on a few types of muskmelons.

Japanese Onion Resembles Ebenezer

Japanese onions are being grown in South Jersey. This is a slow growing, flat onion of remarkable keeping quality. There is reason to believe that it is the same as Ebenezer, which has been grown in Western New York for many years, and which is also planted in certain sections of Iowa. Ordinarily sets are grown from seed and the market crop is grown from the sets.

The scarcity of manure and the better control of plant bed diseases are encouraging the use of flue-heated hotbeds for sweet potatoes.

Professor Nissley recently told the Boston Market Gardeners' Association how they grow crops in Jersey. Such men should be freely exchanged for meetings in the different states, for they are certainly full of suggestive ideas.

Grape Pruning—Grape pruning is done in late February or March. Remember that the fruit is borne on new wood, growing from the buds now present on last year's wood. Most people owning a few vines do not prune grapes heavily enough. A strong vine should be pruned to carry not more than twenty to fifty buds, and weaker vines will do best on even less buds. Too many buds will form too much inferior fruit, sapping the vitality of the vine. Eight canes with about six buds each is a good proportion for a strong vine.

If you have put off taking that farm inventory, do it now; later is too late.

Acetylene For Cooking

Heat, Light and Power Problem on the Farm

"CAN acetylene gas be used for cooking purposes? If so, are any special attachments necessary, and what is the best type of acetylene plants?" asks C. W. B., of New York.

Acetylene is quite commonly used for cooking purposes, and as such is fairly satisfactory fuel. It gives the farm housewife an opportunity to utilize the advantages of the gas stove, even though she be located far from the ordinary gas plant. Manufacturers of acetylene generators and lighting apparatus have perfected equipment whereby acetylene can be used for cooking purposes, and nothing special is needed except the gas stove. The installation of the stove and its regulation for cooking purposes is practically the same as for any other type of gas fuel. It is wonderfully convenient, of course, since all that is necessary is to light the gas and let it burn. The constant charging of the stove, which is necessary where wood or coal is used, is eliminated.

There are a number of different makes of acetylene generators on the market, practically all of which are very satisfactory, and no doubt any reliable manufacturer can readily refer prospective purchasers to long lists of satisfied users.

Two General Types of Generators

Acetylene generators are of two general types, one in which the calcium carbide is dropped into the water, and the other, in which the action is just the reverse, that is, the water is dropped into the carbide. The first, or carbide-to-water system, is the one that is almost universally used in house-lighting acetylene plants, because it admits of much more effective regulation. The outfit consists of a closed vessel containing water in the lower part, and an arrangement for holding carbide in the upper part. The lower part of the carbide container is provided with a special feeding device, which allows a certain quantity of carbide to drop into the water chamber below. As soon as the water and carbide come in contact with each other, the generation of the gas begins. The gas that is generated is led away from the container through a system of pipes to the burners.

The second system of generator, known as the water-to-carbide system, is more adaptable for certain types of lamps, which are subjected to rather hard usage and which contain only a small quantity of carbide.

Types of Burners and Globes

The burners used in an acetylene lighting system may be either what is known as the luminous type, or the incandescent. A luminous burner is one in which the fuel is permitted to combine with oxygen in such a way that one or more constituents of the gas evolves light as it undergoes combustion. The ordinary open gas burner is of the luminous type. An incandescent burner is one in which the fuel burns with a flame, which is in itself atmospheric or non-luminous, the light being produced by causing that flame to play upon some extraneous refractory material that has the property of emitting much light when raised to a sufficiently high temperature. These refractory materials are usually woven into a hollow texture-like shape called a mantel.

The best globes that can be used for acetylene lights are those made from some material which protects the eye from bright and direct rays of light, yet disperses and diffuses the light so that none is lost, but all is used for illuminating. Plain transparent glass, unless the surface is especially sharp in prismatic form, is rather unsatisfactory for globes. Opalescent glass is better.

WINDMILL ELECTRIC PLANTS

Can a farm electric plant be operated by an up and down pump rod 8 ft. windmill. Can enough current be stored to run a 1 H. P. motor 3 hrs. a day? What do you consider the cheapest and best farm lighting plant? Are windmill plants practical?—(C. H. T., Essex County, N. Y.)

There are several companies manufacturing farm electric plants, using

the ordinary windmill wheel as the means of utilizing the power of the wind. An eight-foot wheel is rather small, it is better to have a larger one, since the larger the wheel the more power developed. The amount of current that can be stored up in a storage battery will depend upon the capacity of the generator, and also upon the steadiness and intensity of the wind. I would surmise that under normal conditions, using a fairly large wheel, it would be possible to operate a one horse-power motor from such a storage battery for three hours per day.

In asking me for my opinion as to the cheapest and best electric lighting plant for the farm, you give me a question which I cannot truthfully answer, because there are a number that are very good; some have advantages and disadvantages which the others do not possess. I doubt whether any unprejudiced person can give you a real answer to this question.

I know that wind electric plants are practical, because there are a great many of them in constant use.

CARING FOR THE FARM LIGHTING PLANT BATTERY

What is an overcharge for the ordinary cell of a farm lighting plant battery? If one cell is weaker than the others, should I continue charging all cells, even though some gas before the weaker ones are fully charged? Should the specific gravity of the electrolyte be allowed to run down about to the minimum before recharging or should it be charged more frequently? Is it best to keep the battery fully charged or to let it partially discharge?—M. R. G. Pennsylvania.

A fully charged battery should show specific gravity of between 1.275 and 1.3. When the battery shows specific gravity of 1.15, it is discharged. In determining whether the battery is fully charged or not, a hydrometer should be used. Do not depend altogether upon gassing as an indication of a fully charged cell. There are many reasons why one cell in a battery will show lower specific gravity than another. The cell may have lost some of the electrolyte in shipping, and if so, the gravity must be brought up by adding more acid. The acid should not be added unless the cells are fully charged as indicated by the hydrometer.

A falling off of the specific gravity can usually be traced to wear on the plates, leaky jars or sediment. The gravity in all cells ought to be within 10 to 15 points of each other. It is advisable to recharge the batteries about once a month. This recommendation varies a little with the different makes of batteries. It is not advisable to let batteries become entirely discharged, as there is danger of injuring them. In most farm lighting plants the charge is maintained during the time the engine is run for using current for other purposes. It would be best if the battery could be fairly well discharged and then completely recharged.

DETERMINING POWER OF FLOWING STREAM

Will you inform me what horsepower can be secured from a stream flowing through a trough 22 inches wide and 1.2 inch deep at 3 feet per second? What fall would be necessary to give sufficient power to operate a generator for farm use?—(R. F. M., Paoli, Pa.)

The stream described in your inquiry has a flow of approximately 15 cubic feet per minute, allowing for friction in the trough. This amount of water would have to fall a height of 35 feet in order to develop about one horsepower, and this is not taking anything for the loss of power as a result of inefficiency, which may be anywhere from 10 to 20%. Of course, with a lower fall, less power would be developed, and it could still be used for electric generating purposes, since a storage battery could be utilized to take care of the electricity which is being continually produced. I should imagine that if you could obtain anything like a reasonable fall, that it would be possible for you to use an impulse wheel and a small generator, and make an advantageous use of it.

My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."
—A. Y. Edwards.

EDWARDS ENGINE

Try This Remarkable Engine FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1½ to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work. Change power as needed. It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous. It is many engines in one. Operates with kerosene or gasoline. Easy starting, no cranking. Low factory price—now lower than before the war. The greatest gas engine value on the market. And you can prove all of these statements to your own satisfaction—try the engine yourself—free of cost or obligation.

What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Robert Gruett, of Spokane, Washington, says: "It has given entire satisfaction. Furnishes steadier power than my old engine which weighed twice as much. It is portable, adaptable and free from vibration. If I sold my Edwards today, I would order another tomorrow."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer, threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

Clarence Rutledge, of Manitoulin Island, Ontario, says: "Have given my Edwards three years' steady work

and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines, and the Edwards beats them all."

Kurt Kruger, of New Brighton, Minn., says: "I run a 30-inch wood saw, 8-inch feed grinder, also a pump jack. You cannot beat the Edwards for general farm work."

Free Trial Offer

Now—we want to prove our claims to you. We want to send you an Edwards engine for absolutely free trial. Just send us your name and address and we will send immediately complete details about the Edwards engine and about our remarkable free offer. No cost or obligation. Write now.

What WITTE Users Say

When You Buy a WITTE You Get the Best and Only Log Saw I Make

It's Practical — Durable — Big Capacity — Easy to Operate. Engine speed properly timed with drive gear for steady running and fast cutting. Arm Swing motion—Semi-Steel Saw Levers. New WITTE Throttling Governor Engine. Uses Kerosene, Distillate or Gasoline. Increase or decrease power at will from 500 to 700 R. P. M.

WITTE ENGINE WORKS,

Is Best Proof of WITTE Log Saw Superiority

Steadier Power—Faster Cutting

Read What They Say:

"After seeing three makes I bought a WITTE." (Cal.)
"Sawed fifty 18-inch trees in five hours." (Iowa.)
"Bigger the timber—better she works." (Can.)
"Wouldn't sell for double the price." (Idaho.)
"Outfit works to perfection on fir." (Wash.)
"Log and Tree Saw do perfect work." (Nev.)
"My 15 year old daughter starts it." (Mo.)
"Everyone says 'Best they've seen'." (Can.)
"No limit to the amount of work." (Kan.)
"Beats anything that I ever saw." (Ia.)
"Starts on first whirl." (Cal.)
"Runs fine on kerosene." (Wash.)

ONE RIG ONLY—PRICED RIGHT—\$99.50 F.O.B. K.C.

At Pittsburgh \$107.
At San Francisco \$123.

More Power Than Needed

Saw cuts even and clean without excessive vibration. When used as Tree Saw, only 1 rig to handle. No time lost moving or setting. Positive lever control—Steel axles. Reversible wheels—Built for hard work. Only Log Saw sold on Lifetime Guarantee. Cash or Terms. Write us.

Make Your MILKERS PAY

Every cow in your herd can be made to produce up to her full capacity

—if you look well to her ration, her health, her appetite and her digestion.

Balance the ration. Feed bran, oats and corn, or their equivalent, cottonseed or linseed meal, clover hay, alfalfa, silage—pasture in season.

Remember, the better the appetite the greater the food consumption, the greater the milk production.

DR. HESS STOCK TONIC

Keeps Cows Healthy Makes Cows Hungry

It conditions cows to turn their ration of grain, hay and fodder into pails of milk.

It contains *Nux Vomica*, greatest of all nerve tonics. *Quassia* produces appetite, aids digestion. *Salts of Iron* keeps the blood rich. There are *Laxatives* for the bowels, *Diuretics* for the kidneys, to help throw off the waste materials which so often clog the cow's system.

Excellent for cows at calving. Feed it before freshing. Good alike for all cattle.

Tell your dealer how many cows you have. He has a package to suit. **GUARANTEED.**

25-lb. Pail \$2.25 100-lb. Drum \$8.00

Except in the far West, South and Canada.

Honest goods—honest price—why pay more?

Milk and Meat Scrap in the Poultry Ration

THE question is often asked why it is that we feed animal food. It is because of the presence of certain acids, particularly the various amino acids, which are all important in growth, production and vigor, according to Professor Hervey, of the New Jersey Station. Meat scrap contains these acids in a more available condition than a great many other animal foods. He claims there is nothing that we have as a commodity at the present time that is as good as meat scrap. Powdered buttermilk, or any other milk, fed in the dry state, might logically be included in the dry mash, but as an additional ingredient for the purpose of adding variety, and therefore making the dry mash a little more palatable—in other words, to create a greater consumption of mash by the birds. Powdered buttermilk, powdered skim milk, and, of late, semi-solid buttermilk, reduced to the powdered state, have come to be used more or less generally by commercial people.

Dry or Semi-solid Milk

The question has arisen whether one can afford to feed powdered buttermilk and semi-solid buttermilk; also whether one is a substitute for the other. The New Jersey Station has been recommending the use of semi-solid buttermilk as an adjunct to the other feeds, in the solid form, at the rate of three pounds per 100 birds daily. Semi-solid buttermilk in this form is a good tonic. It contains lactic acid bacteria, which help to ward off other disease germs, and therefore serves to keep the birds in a good, healthy condition.

The other milk products in the dry state he does not believe are as efficient as semi-solid buttermilk in this particular respect. However, their use is logical in a dry mash because of the other properties of palatability and digestibility. This does not in any sense discourage the use of dry milk. Measured from a dollars and cents standpoint, it is questionable whether the poultrymen can afford to feed the two. Satisfactory production can be secured without the use of either one, but the use of semi-solid buttermilk in the winter period has a very good effect in preparing the body for the vigorous strain on the system that the spring laying season demands.

SUNFLOWERS FOR POULTRY

We started in the poultry business in a small way last spring. We have a large field of sunflowers that have headed out fine. Will you kindly tell us something of the food value of the sunflower seeds for laying hens?—Mrs. W. J. O., New York.

Sunflowers are considered very good for poultry. They are about equal to corn in digestive crude protein. However, they contain about half as much total digestive nutrients. In other words, sunflowers alone would not constitute a balanced ration. They may well be mixed in a scratch feed. In fact, some of the best commercial scratch feeds on the market contain a fair proportion of sunflower seeds.

It is usually advisable to slightly crush sunflower seeds by rolling some heavy object over them. This breaks the hard outer coat and also facilitates digestion. Some poultry keepers do not mix their sunflowers with the other grains, but keep them in a special hopper on alternate days during the late fall and early winter. It is best to start cautiously when feeding sunflower seeds to poultry, as the sudden change may have a deleterious action.

A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.

Working along entirely original lines, Mr. Smith discovered why hens lay less in winter than in summer, and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certain to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large \$1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only \$1 on this introductory offer, otherwise, nothing.

Send No Money—just your name and address to M. B. Smith, 1210 Coca Cola Bldg., Kansas City, Mo. The two \$1 packages will be mailed immediately. When they arrive, pay the postman only \$1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

New 300 Candle Power Lantern

Increases Egg Yield
Gives brilliant, soft, white light—like daylight. Just the thing to hang in hen house night and morning.
Burns Kerosene or Gasoline
Clean, odorless, economical. Burns less fuel than wick lantern. Is 100 times brighter. Lights with match. Absolutely safe. Greatest improvement of age. Patented.
Make \$60 to \$100 a Week
Introducing this wonderful new light. Take orders for Lanterns, Table Lamps, Hanging Lamps among friends and neighbors. We deliver by parcel post and do collecting. Commissions paid same day you take orders. Get started at once. Write today for agents offer.

Legumes Cut Grain Bills

Are Farmers Cutting Milk Yield?—By H. H. Lyon

THESE wintry days dairymen are in some cases at least thinking of ways to reduce the amount of feeds it is necessary to purchase. There are many who find that it is necessary to buy the grain feeds on account of the cost of hired labor to grow grains. Some of these grew corn silage, but not all. Many are adding on clover somewhat and are thus tending to reduce the amount of grain feeds purchased. In a few cases alfalfa is grown or is being considered. In our strictly dairy districts alfalfa is not easily grown. There are many who have tried it who feel that it is too difficult a crop to spend time on. Others have come to the same conclusion by watching neighbors try it out.

In an occasional case men say that alfalfa is too difficult to cure. All of these have their reasons and they know much about what they talk. Most of us who have tried it do not get the clear alfalfa and never feed it without some other roughage is also fed. It has always been my custom to sow both timothy and clover in small quantities with the alfalfa. The farm bureau agent is now advising to try it with no seed other than the clear alfalfa. I have seen one such field on our heavy loam hill farm that was a success but it was after considerable experience had been secured in growing it with other seeding. My thought is that the mixed seeding is more easily cured and is fully as safe a feed.

A Question of Rotation

On most of our heavy soils where dairying is supreme there may be only about 10 per cent of the farm that can readily be made to grow alfalfa. In certain cases it is found that these same acres are the ones wanted for silage corn and that a rather short rotation needs to be kept for that. Many say that they can grow clover in the short rotation and perhaps get almost the same feeding value that could be obtained from alfalfa. I am not convinced that the clover crop is fully equal to alfalfa, but it is easier to get started and under such conditions as mentioned it may be the one to grow.

In other instances a longer rotation is desirable and if the land can be made suitable I believe that the alfalfa is to be preferred to any attempt to use clover exclusively. In such cases I still have a preference for seeding with clover and timothy or other grasses. At the same time I have advised a continuance of alfalfa alone where the agent has so advised and a start has been made. It is worth trying out more fully for the individual farmer on his own soil and for his conditions of feeding. The grasses volunteer quickly in the alfalfa lot and by giving the matter a trial one can determine which he likes best. The mixtures cure more readily and if the weather is bad a slightly later cutting still gets us a good feed.

Good Planning Helps

As stated, considerable of our hill land is not adapted to alfalfa and not all of it to corn and clover. By careful planning there will be sufficient clover and alfalfa to help cut quite a bit on the grain feed bill. It follows readily that both these need early cutting for best results. Frequently June is the time of rainy weather and the cutting is delayed. If there is no silo into which some of the clover may be cut in rainy times, the haying must be delayed if the rain comes as it frequently does in late June. That tends to make all the haying late. It goes without saying that early cut hay does much to lessen the grain bill. It may sound whimsical to discuss early haying in mid-winter but I have heard a few men talk it and I consider it a good time. We plan a good deal in winter for the coming summer. On a majority of our farms the alfalfa, clover and early cut hay stand the best chance for a cut in the feed bill of any line of planning that we have.

Farmers Hesitate to Buy Grain

A farmer drove up to a feed store a few days ago with his long wagon-box in which were twenty or more sacks. He commenced to ask the price of feeds, then he talked about the price of milk.

He said he hadn't fed any grain all the fall and so far into the winter. He thought he should feed some grain although he is not milking fresh cows. It is the first time that he has failed to feed grain feeds as soon as the cattle go in the stable to remain and usually he feeds before that time. After considering prices for a little while he drove off saying that he would wait a while before commencing to feed.

I have heard of nothing quite like this case but I have heard of many who are feeding but little grain. I tried to check this up at the feed store but they in some cases insist that what they are selling about as common. Other dealers admit that farmers are not feeding nearly as much as in former years. It is a little difficult to determine exactly what the ratio is, but I feel sure that less grain is fed and that less milk is being made this season than for some years.

Reports as to the number of cows kept seem to differ also. It is possible that the number is somewhat less, but no great change can be found.

Many of the farmers young and some older ones are off the farms now and working in shops. This may mean that there will be a little less produced in crops and milk, but many of these men will return in the spring to the farms and so we need not look for any big drop in production from this cause. While I am looking for a little decline in the amount of milk made next year, it is likely that only weather conditions will make any considerable change.

Farmers generally insist that there ought to be less production but most of them are waiting for the other man to start the shortage and so it doesn't seem to start. However with this continual talk about lessening production it would seem as though the psychology of it might bring something in the way of results.

ACTION NEEDED ON FILLED MILK BILL

The Voigt bill forbidding Interstate Commerce in filled milk was passed by the House of Representatives last year after a great deal of work on the part of farmers and farm organizations. It is now before the Agricultural Committee of the United States Senate. It is said that the Committee is not likely to report the bill out favorably. If this is the case, no action can be expected by Congress this year and all of the work by farmers on this important bill will have been lost. Without doubt, the Voigt filled milk bill is one of the most necessary pieces of agricultural legislation from both the standpoint of dairymen and consumers that has been up for consideration in a long time.

Because there is huge profit in the manufacture of filled milk, the opposition to the passage of the Voigt bill is very strong. To overcome this opposition, will require the united and constant support of farmers. It is urged, therefore, that everyone reading this, write, or preferably telegraph immediately to Senators Wadsworth, Calder, Norris, McKinley, Ladd and Kendricks urging favorable action on the Voigt bill.

REMEDY FOR CALF SCOURS

Ordinary scours in calves are a simple digestive disorder, the result of carelessness in feeding. They should be attended to at once. Cut the feed in half and give a dose of castor oil (½ pint). Clean and disinfect all utensils.

White scours is a germ disease, and is usually fatal. Prevention methods constitute clean quarters for cows at calving time, thoroughly disinfecting the calf's navel at birth, and clean quarters for calves, with plenty of sunlight.

A good remedy where calf scours are prevalent is as follows: 1 oz. Bismuth Subnitrate, ½ oz. Salol, 3 oz. Bicarbonate of Soda. Give one teaspoonful of this mixture in ½ pint of milk three times daily.

Hens stand cold better than dampness

At Calving—when a cow needs a friend

"The Home Cow Doctor"

—this is the title of a genuinely authoritative book on cow diseases, and how to successfully treat them at home.

We want you to have a copy of this book, and will send it free on request. We merely ask you in return to give us the name of your local dealer.

Drop us a postal today for your copy. The book has been worth hundreds of dollars to many cow owners by telling them just what to do at critical times.

NO NEED to tell you that calving is a severe strain on the vital organs of even the most vigorous dairy cow. In the shock and strain lurk many hazards to health and milk-giving.

The genital and digestive organs, carrying the burden of this function, need help. They need a real friend—before, during and after.

Here is where Kow-Kare comes in strong. It contains the medicinal properties to build up the genital organs to vigor, and regulate the digestive functions as nature requires. Because of its success in bringing cows safely thru calf-birth in perfect condition its use in this emergency is known in most well-regulated dairies.

The use of Kow-Kare is neither expensive nor difficult. Just a tablespoonful of the medicine in the feed twice a day for two weeks before and for two or three weeks after calf-birth. A few cents spent to assist nature will repay you with a healthy, productive milker and a vigorous calf.

Kow-Kare is equally effective in treating Retained Afterbirth, Abortion, Barrenness, Scouring, Bunches, Milk Fever, Loss of Appetite, etc. Many dairymen feed Kow-Kare one week each month to every cow, and realize big increases in milk yield thru the added vigor of the herd.

Try Kow-Kare and you will use it always. Feed dealers, general stores and druggists sell it large size \$1.25, medium, 65 cts. Sent prepaid if dealer is not supplied.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

Old Accounts Collected

LAST September we received a letter from Mr. W. J. Steers, Massapequa, L. I., which told of a debt owed him by the National Pie Baking Company of Brooklyn. Almost a year before he wrote us, Mr. Steers had sold this company seventy-four barrels of squash. The driver left them on the promise that a check would be sent, but although Mr. Steers repeatedly wrote and also called himself, he never got any satisfaction about his claim.

It took some time for the Service Bureau to locate the debtor because the company had evidently gone out of business. However, we finally found that a reputable law firm in New York had been appointed attorneys in taking over the reorganization of the company. Through some careless book-keeping on the part of the original owners, the address of Mr. Steers had not been kept, but the lawyers had discovered that the account was payable to him, and had held out sufficient money to meet this indebtedness if Mr. Steers succeeded in getting in touch with them.

They immediately enclosed a check of \$92.50, asking the Service Bureau to forward it, and wrote: "We might add that you have not only been of service to Mr. Steers, but that we have likewise been served, in that you have enabled us to readily dispose of this account, as otherwise we might have been required to retain this fund on hand for some time awaiting developments."

Mr. Steers, on receiving the money, offered to pay any expense of collection, but as usual we wrote him that it was part of the service which the bureau was glad to render at any time, and that we were only glad that his complaint had been one we could settle so swiftly.

COLLECTED HIS COMMISSIONS

"It gives us great pleasure to enclose a check for \$27.50 in settlement of your complaint." It was thus that the Service Bureau wrote to Mr. Bert F. Kiner, of Sloansville, Pa. who submitted his case to us last October. Mr. Kiner had undertaken in August, to sell fruit trees for a firm in New York State. His commission was to be 25 per cent payable on the weekly plan. When \$36.18 was due him, he turned the case over to the Service Bureau. We investigated and found that the company had been rather laggard in paying its commissions, but that the delay was partly due to their natural wish to check up and be sure that the orders were good. In such a case the firms always require good references because they must pay out money in advance before they receive payment for the goods.

The check for \$27.50 covered the major part of the commission due him and the company stated that they would be glad to pay at once as soon as they received from Mr. Kiner the names of banks or other reputable references to cover the rest of the orders. Mr. Kiner felt that he either would not have received this commission or would have had to wait a great deal longer for it if it had not been for the Service Bureau.

MORE LOST EGGS

The American Railway Express Company recently made good a claim for a lost case of eggs within a few days after it was brought to their attention by this magazine. The subscriber who lives in Mannsville, N. Y. had previously endeavored to get action out of the company, but without success.

He very wisely referred it to the American Agriculturist at once. In all such cases it is better to call in the Service Bureau as soon as there is any difficulty because it is sometimes almost impossible to disentangle a case when many different people have had a hand in it.

Just at Christmas Time

A subscriber who had just received a check of \$9.03 through the good offices of the Service Bureau, recently referred to us another case which concerned a lost crate of eggs. We took the matter up at once with the wholesale dealers to whom he had consigned it and at first they claimed that they had no record of the case of eggs. We kept after them however, and just before Christmas Mr. Lewis Green, of So. Otselic, N. Y. received a check for \$6.74. He felt that if it had not been for the service which we rendered he never would have received this money which came just in time for the holiday.

Simple Farm Accounts—The first of the year is the time when those farmers who do not already have a good system of keeping accounts should turn their thoughts in that direction. The county agent can advise on this problem.

Just to say that Tulips came last evening, all O. K. condition. Mrs. Olin says the finest bulbs she ever saw. She was more than pleased with same, besides they were ordered for a surprise and birthday present. But we are truly thankful for them, also to know that each issue of the American Agriculturist is better than the previous week. Wishing you the best that is going.—**Arthur V. Olin**, St. Lawrence Co., N. Y.

This Fine Suit \$18.00

Breeders Endow Stanchions

One of the Features at Pennsylvania Farmers' Week

THE first Winter Farmers' Week since February, 1919, was held at the Pennsylvania State College the week of December 18. The registration of farmers and others interested in agriculture, placed the attendance at the 200 mark for this winter event. College officials in charge of the program gauged its success on the enthusiasm, rather than the number of those who participated in the numerous instructional features. Bad roads and the approach of the holiday season were advanced as the main factors responsible for the deficiency in attendance.

From the list of 150 discussions, demonstrations, and lectures that the agricultural school offered the farmer-visitants to Penn State, several meetings stand out more prominently than others. The greatest interest in any division was generally to be found in that group which satisfied the farmer's appetite for information on the use of better methods in the distribution of his products. Discussions on marketing, economics, better management practices and the most recent developments in livestock production, dairying, crop raising, fruit and vegetable growing, poultry management and farm engineering, found the farmer attentive and keen for an open forum with authorities on the various subjects.

Dairymen Endow Stanchions

If special prominence is to be assigned to any one event on the three-day program, it is that in which 26 enterprising Pennsylvania dairy farmers and associations, each presented the Pennsylvania State College with a pure-bred cow or heifer, selected from among the best individuals in each herd. Last summer, prominent dairymen launched a campaign to "Endow an Empty Stanchion at State College" in an effort to rebuild the college dairy herd, which was severely cut down in quantity and quality as a result of tuberculosis in 1915.

On Dairy Breeders' Field Day, the cattle were exhibited in the live-stock judging pavilion. Of the entire group on exhibit, there were 14 Holsteins, 6 Ayrshires, 5 Jerseys, and one Guernsey. All of them displayed splendid breed type and gave every indication that they would be a great credit to the college herd. The most interesting picture of the ceremony was that in which Mary Josephine McBracken, a fourteen-year old high school girl, delivered her pet three-year old heifer, Pollyanna Segis DeKol, into the keeping of the college dairy officials. This little Miss easily commanded every gaze as she tripped unhesitatingly through her choicely-worded speech, one which seemed to typify the spirit that prompted each donor to give one of his cows to the college.

Program Exceptionally Good

The dairy program in its entirety was exceptionally good. State Secretary of Agriculture, Fred Rasmussen, at one time in charge of Penn State's dairy department, told the farmers what the future held in store for the dairy industry. H. H. Wing, of Cornell University, and J. C. McDowell, of the federal division, also spoke on important developments in the fields of dairying.

Some of the meetings in each division of the farm sessions earned the distinction of particular merit. The talk on mineral feeds for live stock, by Dr. E. B. Forbes, director of the Institute of Animal Nutrition, threw light on a subject with which most farmers are as yet quite unfamiliar. Recent developments in nutrition, as portrayed in a series of lantern-slides and a discussion, by R. A. Dutcher, was another lecture hour that attracted a large crowd.

Future Must Be Bright

(Continued from page 2)

ested care. As the farm we are going on is one that has not been properly farmed for about fifteen years, and also as we are going there in debt for every item we will need for a start, the future has just naturally got to look bright to us. We feel sure that sooner or later,

if the farmers can only hold out, co-operation will win and give us all a chance at a little enjoyment after the long strife. Surely with any fair show at all, the farmers should make good. When the very many advantages of country life are considered we are certain that we can do better there than at anything else, even though at present our assets are merely youth, fair health and strength, and a desire to make a real home for ourselves and our boys where they can grow up naturally. "It is always darkest just before dawn," you know. Your paper will always be a member of our family, as it seems as if it would be impossible to get along without it.—Maybelle Robert, Franklin Co.

Health is Fundamental to Happiness

(Continued from page 3)

Terminal Building, located in New York City.

The women who helped the survey learned much about the health conditions in the schools of the State. If you were one of them you found that the health conditions of your school depends on public opinion in your community. If you were not one of these women, put on your hat and coat now, and walk down the snowy road to your schoolhouse. Find out about the place your children live in when they are away from home, what they are taught about health, and whether this teaching really makes them want to practice the health habits. Then tell your Women's Club or your Parent-Teacher's Association, or your church, or your neighbor what you have found out and what you think should be done, and work with them to do it.

Printed Programs Will Help

If you would like help on deciding how to go about it, the Child Health Organization of America, 370 Seventh Avenue, New York, has published a pamphlet for your guidance on "A School Health Program for Parent-Teacher's Associations and Women's Clubs." It contains a definite plan of action, with programs for meetings and a complete list of references for papers or discussions. A regular boy, called Jack Belden, also appears in the booklet, and tells in letters and pictures what he thinks of health teaching. This same Jack "listened in" on the women who came to call on his teacher during the School Health Survey, and this is what he wrote to his cousin Jim: "Dear Jim:

"Mrs. Martin came to our school today to see Miss Bell. She is the wife of Mr. Martin. He let Bud and me come in his orchard and pick up apples. Well, this Mrs. Martin asked Miss Bell a whole lot of questions, all about whether it was a good school for our health. She didn't stick Miss Bell once. Only, of course, she could see for herself, anyway, whether we were healthy or not, and the floor clean and the windows open. Well, all us kids hoped she'd keep on asking questions till it was time for 'rithmetic to be over, but pretty soon she stopped and said: 'This is such a fine school, I don't suppose you need anything, do you, Miss Bell?' and then everyone yelled at once, because just yesterday Miss Bell made us rite a composition on 'what our school needs,' and when you know the answer to a question you almost burst if you can't tell it.

"Well, Mrs. Martin had to put her hands over her ears, and Miss Bell laffed and said she would send our compositions to the Wimmings Club. As for her, she said the thing the school needed most was the interest and help of the hole town, and then it would turn us out good and healthy, and be a credit to it. So then Mrs. Martin left and there was enough time left of the 'rithmetic class for Miss Bell to find out I didn't know my lesson. The wimmin are on their job in this town, Jim, I'll tell the world."—Grace T. Hallock and Anna L. Sworts, of the Child Health Organization.

The Valley of the Giants—By Peter B. Kyne

WHEN Bryce Cardigan, son of a pioneer in the redwoods country, comes home to Sequoia from college, he finds his father, now almost blind, engaged in a struggle against an aggressive newcomer, Colonel Pennington. Bryce, who has started a friendship with the Colonel's niece, Shirley Sumner, vows to rescue his father's business and especially to preserve the Valley of the Giants, a magnificent grove where his mother is buried, and which, because it blocks the Colonel's holdings, is menaced by the new operator.

On his first visit to the Valley of the Giants, he discovers that the noblest tree has been wantonly cut down for the burl, and that in falling, it has destroyed his mother's grave. An envelope with the name of Jules Rondeau proves that Pennington's woods-boss was the vandal. At Shirley's invitation Bryce has dinner with her and the Colonel, and conveys to the latter that he knows who stole the burl.

"I DID not expect you to agree to my request. I am not quite that optimistic," Bryce replied.

"Then why did you ask me?"

"I thought that possibly you might have a reasonable counter-proposition."

"I haven't thought of any."

"I suppose if I agreed to sell you that quarter-section of timber in the little valley over yonder" (he pointed to the east) "and the natural outlet for your Squaw Creek timber, you'd quickly think of one," Bryce suggested pointedly.

"No, I am not in the market for that Valley of the Giants, as your idealistic father calls it. Once I would have purchased it for double its value, but at present I am not interested."

"Nevertheless it would be an advantage for you to possess it."

"My dear boy, that is an advantage I expect to enjoy before I acquire many more gray hairs. But I do not expect to pay for it."

"You figure you've got us winging, eh?" Bryce was smiling pleasantly.

"I am making no admissions," Pennington responded, "—nor any hauling contracts for my neighbor's logs," he added.

"You may change your mind."

"Never."

"I suppose I'll have to abandon logging in Township Nine and go back to the San Hedrin," Bryce sighed resignedly.

"If you do, you'll go broke. You can't afford it. You're on the verge of insolvency this minute."

"I suppose, since you decline to haul our logs, after the expiration of our present contract, and in view of the fact that we are not financially able to build our own logging railroad, that the wisest course my father and I could pursue would be to sell our timber in Township Nine to you."

"I had a notion the situation would begin to dawn upon you." The Colonel was smiling now. "I'll give you a dollar a thousand feet stumpage for it."

"On whose cruise?"

"Oh, my own cruisers will estimate it."

"I'm afraid I can't accept that offer. We paid a dollar and a half for it, and if we sold it to you at a dollar, the sale would not bring sufficient money to take up our bonded indebtedness; we'd only have the San Hedrin timber and the Valley of the Giants left, and since we cannot log either of these at present, naturally we'd be out of business."

"That's the way I figured it, my boy."

"Well—we're not going out of business."

"Pardon me for disagreeing with you. I think you are."

"Not much! We can't afford it."

THE Colonel smiled benignantly. "My dear boy, listen to me. Your father is the only human being who has ever succeeded in making a perfect monkey of me. When I wanted to purchase a right of way through his absurd Valley of the Giants to log my Squaw Creek timber, he refused. And to add insult to injury, he spouted a lot of rot about his big trees, how much they meant to him, and the utter artistic horror of running a logging-train through the grove—particularly since he planned to bequeath it to Sequoia as a public park."

"My boy, that was the first bad break your father made. His second break was his refusal to sell me a mill site. He had been shrewd enough to hog all the water-front real estate and hold onto it. I remember he called himself a progressive citizen, and when I asked him why he was blocking the wheels of progress, he replied that the railroad would build in from the south some day, but that when it did, its builders would have to be assured of terminal facilities on Humbolt Bay. 'By holding intact the spot where rail and water are bound to meet,' he told me, 'I insure the terminal on tidewater which the railroad must have before consenting to build. But if I sell it to Tom, Dick, and Harry, they will be certain to gouge the railroad when the latter tries to buy it from them. They may scare the railroad away.'"

"Naturally!" Bryce replied. "The average human being is a hog, and merciless when he has the upper hand. My father, on the contrary, has always planned for the future. The country needed rail connection with the outside world, and moreover his San Hedrin timber isn't worth a hoot until that feeder to a trans-continental road shall be built to tap it."

"But he sold Bill Henderson the mill site on tidewater that he refused to

sell me, and later I had to pay Henderson's heirs a whooping price for it."

"But he needed Henderson then. They had a deal on together. You must remember, Colonel, that while Bill Henderson held that Squaw Creek timber he later sold you, my father would never sell him a mill site. Can't you see the sporting point of view involved? My father and Bill Henderson were good-natured rivals; for thirty years they had tried to outgame each other on that Squaw Creek timber. They were perfectly frank about it with each other and held no grudges. Of course, after you bought Henderson out, you foolishly took over his job of trying to outgame my father. That's why you bought Henderson out, isn't it? You had a vision of my father's paying you a nice profit on your investment, but he fooled you, and now you're peeved and won't play."

Bryce hitched his chair farther toward the Colonel. "Why shouldn't my dad be nice to Bill Henderson after the feud ended?" he continued. "They could play the game together then, and they did. Colonel, why can't you be as sporty as Henderson and my father?"

"I will not renew your logging contract. That is final, young man. No man can ride me with spurs and get away with it."

"Oh, I knew that yesterday."

"Then why have you called on me to-day, taking up my time on a dead issue?"

"I wanted to give you one final chance to repent. I know your plan. You have it in your power to smash the Cardigan Redwood Lumber Company, acquire it at fifty per cent of its value, and merge its assets with your Laguna Grande Lumber Company. In order to achieve your ambitions, you are willing to ruin a competitor: you decline to play the game like a thoroughbred."

"I PLAY the game of business according to the rules of the game; I do nothing illegal, sir."

"And nothing generous or chivalrous."

"Young man, remember, you are not in a position to ask favors."

"Then I suppose we'll have to go down fighting?"

"I do not anticipate much of a fight."

"You'll get as much as I can give you."

"I'm not at all apprehensive."

"And I'll begin by running your woods-boss out of the country."

"Ah-h!"

"You know why, of course—those burl panels in your dining room. Rondeau felled a tree in our Valley of the Giants to get that burl for you, Colonel Pennington."

Pennington flushed. "I defy you to prove that," he almost shouted.

"Very well. I'll make Rondeau con-

fess; perhaps he'll even tell me who sent him after the burl. At any rate, I know Rondeau is guilty, and you, as his employer and the beneficiary of his crime, must accept the odium."

The Colonel's face went white. "I do not admit anything except that you appear to have lost your head, young man. However, for the sake of argument: granting that Rondeau felled that tree, he did it under the apprehension that your Valley of the Giants is a part of my Squaw Creek timber adjoining."

"I do not believe that. There was malice in the act—brutality even; for my mother's grave identified the land as ours, and Rondeau felled the tree on her tombstone."

"If that is so, and Rondeau felled that tree—I do not believe he did—I am sincerely sorry, Cardigan. Name your price and I will pay you for the tree."

"You can't pay for that tree," Bryce burst forth. "No pitiful human being can pay in dollars and cents for the wanton destruction of God's handiwork. You wanted that burl, and when my father was blind and could no longer make his Sunday pilgrimage up to that grove, your woods-boss went up and stole that which you knew you could not buy."

"That will be about all from you, young man. Get out of my office. And by the way, forget that you have met my niece."

"It's your office—so I'll get out. As for your second command"—he snapped his fingers in Pennington's face—"fooeey!"

When Bryce had gone, the Colonel hurriedly called his logging-camp on the telephone and asked for Jules Rondeau, only to be informed that Rondeau was up in the green timber and could not be gotten to the telephone in less than two hours.

"Do not send for him, then," Pennington commanded. "I'm coming up on the eleven-fifteen train and will talk to him when he comes in for his lunch."

Just as the Colonel was leaving to board the logging-train bound empty for the woods, Shirley Sumner made her appearance in his office.

"Uncle Seth," she complained, "I'm lonesome. The bookkeeper tells me you're going up to the logging-camp. May I go with you?"

"By all means. Usually I ride in the cab with the engineer and fireman; but if you're coming, I'll have them hook on the caboose. Step lively, my dear, or they'll be holding the train for us and upsetting our schedule."

CHAPTER XV

BY virtue of their logging-contract with Pennington, the Cardigans and their employees were transported free over Pennington's logging railroad; hence, when Bryce Cardigan resolved to wait upon Jules Rondeau in the matter of that murdered Giant, he chose the most direct route, and as the long string of empty trucks came crawling off the Laguna Grande Lumber Company's log-dump, he swung over the side, quite ignorant of the fact that Shirley and her precious relative were riding in the little caboose in the rear.

At twelve-ten the train slid in on the log landing of the Laguna Grande Lumber Company's main camp, and Bryce dropped off and approached the engineer of the little donkey-engine used for loading the logs. "Where's Rondeau?" he asked.

The engineer pointed to a huge, swarthy man approaching across the clearing. "That's him," he replied. And without further ado, Bryce strode to meet his man.

"Are you Jules Rondeau?" he demanded as he came up to the woods-boss. The latter nodded. "I'm Bryce Cardigan," his interrogator announced, "and I'm here to thrash you for chopping that big redwood tree over in that little valley where my mother is buried."

"Oh!" Rondeau smiled. "Wiz pleasure, M'sieur." And without a moment's hesitation he rushed. Bryce backed away from him warily, and they circled.

"When I get through with you, Rondeau," Bryce said distinctly, "It'll take a good man to lead you to your meals. This country isn't big enough for both of us, and you've got to go first."

Bryce stepped in, feinted for Rondeau's jaw with his right, and when the woods-boss quickly covered, ripped a sizzling left into the latter's midriff. Rondeau grunted and dropped his guard, with the result that Bryce's great fists played a devil's tattoo on his countenance before he could crouch and cover.

"This is a tough one," thought Bryce. His blows had not, apparently, had the slightest effect on the woods-boss. Crouched low and with his arms wrapped around his head, Rondeau still came on unfalteringly.

Already word that the woods-boss was battling with a stranger had been shouted into the camp dining room, and the entire crew, came pouring forth to view the contest. Out of the tail of his eye Bryce saw them coming, but he was not apprehensive, for he knew the code of the woodsmen: "Let every man roll his own hoop." It would be a fight to a finish, for no man would interfere; striking, kicking, gouging, biting, or choking would not be looked upon as unsportsmanlike; and as Bryce backed cautiously away from the huge and powerful man before him, he realized that Jules Rondeau was, as his father had stated, "top dog among the lumberjacks."

RONDEAU, it was apparent, wanted a rough-and-tumble fight and kept rushing, hoping to clinch; if he could but get his great hands on Bryce, he would wrestle him down and finish the fight in jig-time. But a rough-and-tumble was exactly what Bryce was striving to avoid; hence when Rondeau rushed, Bryce side-stepped and peppered the woodsman's ribs. But the woods-crew, which by now was ringed around them, began to voice disapproval of this style of battle.

"Clinch with him, dancing-master," a voice roared.

"Tie into him, Rondeau," another shouted.

"It's a fair match," cried another. The red one was looking for a fight, an' he ought to get it; but these fancy fights don't suit me. Flop him, stranger, flop him."

A fourth jeered. "He's a foot-racer, not a fighter."

Suddenly two powerful hands were placed between Bryce's shoulders, and he was propelled violently forward until he collided with Rondeau. With a bellow of triumph, the woods-boss's gorilla-like arms were around Bryce, swinging him until he faced the man who had forced him into that terrible grip. This was no less a personage than Colonel Seth Pennington, and it was obvious he had taken charge of what he considered the obsequies.

"Stand back, you men, and give them room," he shouted. "Rondeau will take care of him now. I'll discharge the man that interferes."

With a heave and a grunt Rondeau lifted his antagonist, and the pair went crashing to the earth together, Bryce underneath. And then something happened. With a bowl of pain, Rondeau rolled over on his back and lay clasp- ing his left wrist in his right hand, while Bryce scrambled to his feet.

"The good old wrist-lock does the trick," he announced; and stooping, he grasped the woods-boss by the collar with his left hand, lifted him, and struck him a terrible blow with his right. But for the arm that upheld him, Rondeau would have fallen. Jerking the fellow toward him, Bryce passed him arm around Rondeau's neck, holding the latter's head as in a vise with the crook of his elbow. And then the batteries started. When it was finished, Bryce let his man go, and Rondeau, bloody, sobbing, and semi-conscious, sprawled on the ground.

Bryce bent over him. "Now," he roared, "who felled that tree in Cardigan's Redwoods?"

"I did, M'sieur." The words were a whisper.

"Did Colonel Pennington suggest it to you?"

"He want ze burl. By gar, I do not want to fell zat tree—"

"That's all I want to know." Stooping, Bryce seized Rondeau by the nape of the neck and the slack of his overalls, lifted him shoulder-high and threw him, as one throws a sack of meal, full at Colonel Pennington.

"You threw me at him. Now I throw him at you. You thieving, hypocritical scoundrel, if it weren't for your years and your gray hair, I'd kill you."

The helpless hulk descended upon the Colonel's expansive chest and sent him crashing earthward. Then Bryce turned to face the ring about him.

"Next!" he roared. "Singly, in pairs, or the whole pack!"

"Mr. Cardigan!"

He turned. Colonel Pennington's breath had been knocked out of his body by the impact, and he lay gasping like a hooked fish. Beside him Shirley Sumner was kneeling, her hands clasping her uncle's, but with her violet eyes blazing fiercely on Bryce Cardigan.

"How dare you?" she cried. "You coward! To hurt my uncle!"

He gazed at her a moment, fiercely, defiantly, his chest rising and falling from his recent exertions, his knotted fists gory with the blood of his enemy. Then the light of battle died, and he hung his head. "I'm sorry," he murmured, "not for his sake, but yours. I didn't know you were here."

"I'll never speak to you again so long as I live," she burst out passionately.

He stood gazing down upon her. Her angry glance met his unflinchingly; and presently for him the light went out of the world.

"Very well," he murmured. "Good-bye." And with bowed head he turned and made off through the green timber toward his own logging-camp five miles distant.

CHAPTER XVI

WITH the descent upon his breast of the limp body of his big woods-bully, Colonel Pennington had been struck to earth as effectively as if a fair-sized tree had fallen on him. To complete his withdrawal from active service, the last whiff of breath had been driven from his lungs; and for the space of a minute, during which Jules Rondeau lay heavily across his midriff, the Colonel was quite unable to get it back. Pale, gasping, and jarred from soul to suspenders, he was merely aware that something unexpected and disconcerting had occurred.

While the Colonel fought for his breath, his woodsmen remained in the offing, paralyzed into inactivity; then Shirley motioned to them to remove the wreckage, and they hastened to obey.

Freed from the weight, Colonel Pennington stretched his legs, rolled his head from side to side, and snorted violently several times. After the sixth snort he felt so much better that a clear understanding of the exact nature of the catastrophe came to him; he struggled and sat up, looking around a little wildly.

"Where—did—Cardigan—go?" he gasped.

One of his men pointed to the timber into which the enemy had just disappeared.

"Surround him—take him," Pennington ordered. "I'll give—a month's pay—to each of—the six men that bring—that scoundrel to me. Get him—quickly! Understand?"

Not a man moved. Pennington shook with fury. "Get him," he croaked. "There are enough of you to do—the job. Close in on him—everybody. I'll give a month's pay to—everybody."

(Continued next week)

And She Is Still Walking

It has been figured out that a farm woman in the United States living on the same farm for fifty years has walked 5,710 miles to and from the well and has carried nearly 2,000 tons of water, according to a report from Ohio extension service. It would have cost only \$18 to extend a pipe from the well and put a pump in the kitchen.

Before Storing Machinery—Farm machinery that will not be used again until next spring or summer, should be placed under cover for the winter. Give the wearing parts a good covering of oil. A little paint on rusted portions will lengthen the implement's life.

Why Farmers are Turning to

for Economical Transportation

In 1922 Chevrolet jumped from seventh to second place in sales of all cars, and to first place in sales of fully equipped modern cars.

Purchases by farmers were the chief factor in this remarkable development.

Farmers are shrewd buyers and study costs and values carefully.

They want automobiles not only of low first price, but also of low later cost for operation and maintenance.

They want room, comfort and

the ability to stand up under hard conditions.

They find that Chevrolet, fully equipped as sold is the best value per dollar in the low-priced field, and neighbors tell them it costs least per mile to operate.

They find it roomy, easy to handle and reliable.

They like its finish and its long stream lines.

That is why the farmer demand for Chevrolets is daily increasing its lead among modern, quality automobiles.

Ben—A "Cat-Tale"

And Some Sensible Hints for First Aid at Home

A few weeks ago American Agriculturist started to tell the story of Ben, the famous mouse catcher, belonging to Mrs. Ida A. Brown whose stories of animals have interested all our readers. You will remember that we left Ben sitting on a barrel full of mice trying to hold about six which he had covered at his first jump.

THEN we looked at that darling cat. He sat perfectly rigid, not daring to stir for fear of losing one of these mice. His eyes, which were very large anyhow, simply bulged right out of his head. We laughed as hard as we could, but we helped him by taking the mice out one at a time from under each foot and killing them. As we took them he began to look relieved, and when he had just the one in his mouth left he soon finished him. Such a lot of mice as there were all over the sides of that box! It was enough to make any ambitious cat frantic, especially to see so many getting away.

Ben Harrison loved music and when my sister played and sang he would hurry on a trot, climb into her lap, put a front paw on each of her shoulders and look up into her face, with the most angelic look on his face you ever saw. He was always completely charmed with the music. Now Ben could do several tricks. He could jump over your clasped hands held quite high. He would shake hands and roll over, and at meal times, just as we would start eating, all at once in would run Ben. Then he would chase his tail round and round until he would be so dizzy that he would stagger around with his big eyes bulging out. When some of us would say, "Oh, see Ben! Isn't he cute!" he would stop and purr, as pleased as could be.

Well, we moved from there one day, and Ben never seemed to like the new place. He often went back where we had lived and once had quite an adventure.

The Wrong Cow in the Stable

In our old barn was a ladder which went straight up the side into the hay-loft. It had flat rungs, instead of the usual round ones. At the foot of that ladder were the stables and stanchions for the cows, and just in the first stanchion on the right always stood a large gentle red Durham cow. This cow and Ben were great friends. Ben would come down the ladder backwards, very carefully. The rungs were quite close together and he came down easily. When he was almost down, he would turn and jump in Red's feed box, and from there onto her back. She never seemed to mind him a particle, but ate serenely on. He would sit there and wash his face, then jump down by the side of the man who was milking her and he would milk a little stream slowly into Ben's wide-open mouth. He would soon get enough and step away and wash up.

Now comes the most exciting part of my story. The people who moved there after we left had just such a looking cow as we had, and she was just put in that stanchion as luck would have it, and, of course, she did not know of Ben Harrison or of his habits either. Well, one morning Mr. Lane was milking and had a pail nearly full. Ben Harrison came down that ladder as usual, jumped into the feedbox and on that cow's back. When whiz, bang! away went Mr. Lane's pail of milk, and the cat, too. When things calmed down a little Mr. Lane got to his feet and picked up a perfectly demoralized milk pail. He looked around and there sat Ben soaked in warm milk, and pawing out his eyes with first one paw and then the other.

Mr. Lane sat down and laughed until the tears came. He took it like a sport and never held any grudge against Ben. When he told us about it the next day, we explained why Ben did such mischief. But they said that when Ben came back to visit he never came near that cow again. He had learned from experience, which humans do not always do!

FOREIGN BODIES IN THE FLESH

ALICE M. SMITH, M. D.

Before attempting to remove a foreign body from the flesh, cleanse the part with some good disinfecting solution, as soap well diluted with water, and boiled until sterile. If this is impractical, the wound may be thoroughly cleansed after the substance is removed. A good treatment is to apply tincture of iodine, or a strong solution of baking soda made with boiling water, cooled, and the injured part soaked in it while as hot as can be borne, and afterwards wrapped up in dressing made of clean gauze, or absorbent cotton. Then bandage carefully. The painting of the wound with iodine for a small puncture is the simplest method of treatment.

For home treatment, a penknife, needle or other sharp-pointed instrument may be cleansed by passing back and forth through a lamp or candle, or match-flame, until danger from infection from their use is eliminated, and then used to remove the foreign body. The needle makes a very good probe when the object has penetrated deeply into the skin or below it. Introduce the point into the opening and gently move it about until it clicks against the foreign body. Its location thus determined, it becomes easy to remove the offending object without unnecessary injury to the tissues.

Another method of extracting a thorn, needle or splinter from the flesh is to apply steam. This is done by nearly filling a wide-mouthed bottle with hot water, then pressing the injured part down over the mouth of the bottle, holding it there for a few minutes. The steam should loosen the foreign body and bring it to the surface, after which it may be easily extricated.

Should this method fail, the wound should be incised to the extent of thoroughly exposing the foreign body and every fragment removed. This is preferably the work of a physician, and it naturally follows that such a wound should have sterile dressing to protect it from becoming infected.

To Keep Hands From Chapping

The following is an excellent remedy for chapped hands and face and a good preventive as well. Add five cents worth of tincture of benzoin and five cents worth of glycerine to a pint of water (rain water is best). Moisten the hands with this at night when retiring and as often as convenient during the day. Loose mittens made of white outing flannel worn at night are also a great help in the care of hands. I find it not advisable to use glycerine alone. It seems to be too strong and reddens and thickens the skin unless properly diluted. When thin it has the opposite and desired effect.—(Mrs. W. H. H., Virginia.)

31 DINNER SET FREE

SEND NO MONEY

for this complete set of guaranteed semi-porcelain china. Absolutely Free. No extra money to pay. Most startling offer ever made. Just the set for family of six. Yours free.

BOYS AND GIRLS: you can have cameras, rifles, jewelry, etc., absolutely free. Simply sell 40 packets of guaranteed fresh garden seed to your friends. Only 10c. for large packet. New Lamp Invention Beats Electricity

Beautiful Lamp Gives 400 Candle Power For Less Than 1/2 Cent A Night

Any home may now have the benefits of electric lights at practically no cost through the remarkable invention of B. J. Davis, a Kansas City expert mechanic.

This amazing invention, called the Economy Lamp, is beautifully designed and an ornament to any home. There is no wick, chimney or odor. It lights instantly and gives more light than 20 electric light bulbs, 27 lamps or 400 candles at a cost of less than 1/2 cent a night. It is so simple, a child can operate it with perfect safety and carry it anywhere.

So proud is Mr. Davis of his invention that he wants to send an Economy Lamp free to try, to any reader of American Agriculturist who will write for it. If you want plenty of soft, brilliant, healthful light you should accept this generous offer without obligation by simply sending your name and address to B. J. Davis, 528 Economy Bldg., Kansas City, Mo., before this special introductory offer is withdrawn.

Designs for Winter Sewing

And Some Unusual Recipes for the Lowly Potato

THE sailor suit has become a staple both for boys and girls, although the girls seem to have adopted the straight middie blouse for their own. The patterns chosen this

week illustrate an everyday middie with pleated skirt for the girl, and a smart little suit with the regulation big collar and band trimming for the boy.

The skirt of the two-piece middie dress is joined to an underwaist. This is especially good for school and separate middies, in wash materials, may be made for all-the-year round wear.

No. 1300 cuts in sizes 4 to 14 years. Size 8 requires 1½ yards 36-inch material for blouse and 2

yards 36-inch material for skirt, collar and cuffs. Price 12 cents in stamps.

Every small boy has a hankering for things nautical, and the youngster who gets this suit will feel like a regular sailor. Although they may be omitted, the applied yoke and shield of the blouse, the white braid, the tailored pocket and the lacing, all make the little suit just like a sailor's uniform. Either cloth or wash goods can be made up effectively in this style.

No. 1540 cuts in sizes 2, 4, 6 and 8 years. Size 4 requires 1½ yards 36-inch material with ½ yard 22-inch contrasting and ¾ yards braid. Price 12 cents in stamps.

To Order: Write name and address, number of pattern and size very plainly. Enclose 12 cents in stamps for each pattern ordered. Send orders to the Fashion Department, American Agriculturist, 461 4th Avenue, New York City.

Our Fall and Winter Book of Fashions is still obtainable. It will be sent upon receipt of 10 cents. Address your order to the Fashion Department.

THE PROPER CARE OF SHOES

HARRY J. BURKE

Every woman likes to have her shoes suit her costume, and certainly, the comfortable low-heeled walking shoe meant for the street would look grotesque on the ballroom floor. There must be a sufficient number of shoes in the closet, but there is also such a thing as making them last as long as possible.

In the first place keep them away from heat, which takes the resiliency from the leather. It is a mistake to place wet shoes near a fire or radiator. They should be allowed to dry slowly, and one of the simplest ways to do this is to stuff them tightly with crumpled newspaper, leaving them lying on their sides until dry. The paper not only absorbs the moisture, but helps to retain the shape and prevents shrinking. Farmers recognize this by pouring grain, usually heated a trifle, into their boots when they come in from soaked fields.

It is a good practice to waterproof the soles of house and street shoes by allowing them to stand overnight in a saucer of oil. Some persons varnish the soles of their shoes periodically. Polishing a new pair of shoes

before they are worn keeps them in condition longer, but use paste rather than the liquid application for regular treatment. The liquid application, though convenient for emergency use, or for the heels, sometimes causes the leather to crack as it lacks the softening qualities of oil paste. Two parts of olive oil to one part of milk is a good, homemade dressing for any leather article, whether shoes, belts, bags, or gloves. A reliable brand of furniture polish often makes the best dressing for tan shoes.

For suede, an emery board is recommended but if not obtainable, a stiff brush will suffice.

NOVEL POTATO RECIPES

NELLE PORTREY

During the winter, when, with many of us, the potato is the only fresh vegetable, the good cook is ever on the alert for new ways of serving it. The potato is no longer merely served creamed for a holiday dish or boiled, with gravy, for every-day meals. The recipes given below all have the virtue of being "tried and true," yet novel ways of using the favorite American vegetable.

Browned Potatoes

This is a popular way of serving potatoes; popular with men because they are certainly delicious, and popular with women because the very small potatoes may be used in this way, although if there are no small ones, larger ones may be cut in pieces about 1½ inches across.

After the potatoes are peeled and cut in the right size, boil them in salted water until nearly soft. Drain and fry in deep fat till well browned. Sprinkle with salt and serve hot.

Potato Puff

Mash 2 cups of hot, boiled potato and add the beaten yolk of an egg. Stir well and add ½ cup of rich milk, a teaspoon of salt and butter the size of an egg. Beat till light and creamy and fold in the beaten white of an egg. Put in a baking dish and dot with bits of butter. Bake till lightly browned and serve hot.

Potato Omelet

Add 6 eggs to 1 cup of mashed potatoes. Beat well and add 1 teaspoon salt, 1 teaspoon flour, 1 pint of milk, and ¼ teaspoon baking powder. Pour in a hot, buttered skillet and bake till brown in a very quick oven. Serve hot.

Potato Gems

To 1 cup of mashed potatoes add 2 eggs, 2 teaspoons baking powder, 1 teaspoon salt, 3 tablespoons lard or other shortening and 1 cup of sweet milk. Mix thoroughly and add enough flour to make a stiff batter. Drop in greased gem pans and bake in a quick oven. Serve hot with butter.

Potato Biscuit

Sift 2 cups of flour with 1 teaspoon salt and 3 teaspoons baking powder. Into this rub a heaping teaspoon shortening. Into the flour mixture rub a cup of mashed potatoes. Add enough cold sweet milk to make the mixture cling together. Place on a floured board and without kneading, roll to a thickness of about one-third inch. Place in floured biscuit tins and bake in a moderate oven. Potato biscuits should not be baked in as hot an oven as plain flour biscuits.

To keep raisins from sinking in a cake or bread, they may be creamed with the butter, then the sugar added, and the regular process of bread or cake-making proceeded with in the usual order. The cake or bread will be darker and richer looking when this method is employed.

A dressing of two parts of beeswax to one part of mutton fat melted together will make shoes as nearly "waterproof" as it is possible to make them. Apply at night and wipe well next morning with a piece of flannel.

Reviewing the Latest Eastern Markets and Prices

APPLE MARKET CONTINUES DULL

BOXED apple receipts at New York still greatly exceed barrel apple receipts. The market for barrels continues dull. Fancy colored stock met a fairly steady demand at New York, but demand was light for ordinary. Receipts were 160 cars less last week than the week previous. Out of 304 cars received, 176 were boxed from the West and 112 were barreled from New York State.

F. O. B. sales at Rochester were very limited. British markets are weaker. Up to December 16 exports this season totaled 1,000,771 barrels and 1,802,272 boxes.

Because of the heavy stocks in storage, the future of the market is very uncertain.

The following were wholesale prices per barrel at New York, December 27:

APPLES	Best	Fancy	Ordinary
Baldwin..	\$4.75@5	\$5.25@5.50	\$4 @4.50
Greening..	4.50@4.75	5	3.75@4.25
McIntosh.	7.50@8	8.25@8.50	6.50@7
Northern Spy	5.50@6	6.25@6.50	4.50@5
Ben Davis	3 @3.25	3.50@3.75	2.50@2.75

Potatoes Tend to Move More Freely

Reports from various shipping points indicate that there was a tendency for potatoes to move more freely in the country last week. In up-State New York the general price paid to farmers seemed to be about 45 cents per bushel, with some higher offers. A cold snap in the next two or three weeks would undoubtedly cause a higher market, as it would check shipments from northern sections and quicken demand.

Long Island Green Mountains continued to sell at \$1 per bushel f. o. b. in limited quantities, but in general the market was about 90 cents per bushel, which is higher than the situation of supply and demand would seem to warrant.

Maine potatoes sold after Christmas at about \$1.25 per cwt., delivered at Harlem yards, and \$1.30 per cwt., delivered at 33rd Street. These moved to retailers and jobbers at about \$2.85 per 180 pounds bulk.

New Bermuda potatoes are now in the market in sufficient quantities to bring the top price down to \$10 per barrel, although the first shipments brought \$15.

The Michigan Potato Growers' Association is taking the initiative in calling a conference of potato shippers and growers for January 15 at Sherman Hotel, Chicago, to consider the problem of marketing this year's enormous crop. The situation calls for the most profound study and analysis, they state. One prominent potato man claims that restaurants charge too

a few small sales up to \$3. Present prices for best yellows are about half what they were at this time last year, but No. 2s are very little lower. Orange County yellows, \$2.25 @ 2.50; reds, best, \$2 @ 2.15. Total carlot shipments of onions in the country to date exceed those last year to same date by several thousand cars. One of the largest dealers in onions in this market said last week that this is the first time this season he has been able to make any money on onions. The best demand for them usually comes just before Easter, but ordinary stock should be moved whenever a good market can be found.

Butter Weakens Slightly, Reserves Short

After months of continual advancing, butter prices declined slightly last

December 23, as compared with 815,113 cases on the same date last year. The apparent movement of eggs into channels of consumption was lower last week than in either of the two weeks preceding and less than in the corresponding week of last year.

Poultry Market Dull After Holidays

Turkeys arrived in such large quantities just before Christmas that prices dropped 6 to 8 cents, and at close fancy Western turkeys sold at 42 @ 45c. Since Christmas, speculators have secured for freezing a good many cars at 44 @ 45c for young toms and 35c for old toms. All poultry declined after close of Christmas market, and probably will not recover till after New Year's. The receipts of fresh killed poultry continues heavy. Market is very weak for hard, coarse and poor quality stock, but fancy, soft-meated chickens sell well. Dressed geese are in good demand, but ducks have been rather slow. Although fowls are in liberal supply, they move well at steady prices.

The receipts of live poultry have been extraordinarily heavy. The demand is good, but not sufficient to dispose of the supply at satisfactory prices. Fancy, heavy fowls have sold most easily. (See quotation in center of page.)

Country Dressed Meats Hold Fairly Steady

Although receipts of dressed calves were light, they exceeded the demand last week and sold slowly. Wholesale prices were 1 cent per pound lower on all grades than a week previous. Per pound, choice, 17 @ 18c; good to prime, 15 @ 16c; medium, 12 @ 14c; small, 8 @ 10c; with skins, 18 @ 24c.

Dressed pigs found a fair demand at steady prices. Per pound, white, skinned, roasting, 10 to 15 pounds, 30c; 16 to 40 pounds, 20 @ 23c; 40 to 60 pounds, 15 @ 16c.

Live Stock—The market steady on all kinds of live stock last week, and prices were practically unchanged from previous week.

Hay Market Dull After Christmas Spurt

The advance in hay prices just before Christmas did not continue, and on December 27 the market was dull, with prices barely steady. Owing to heavier supplies, Brooklyn prices were about \$1 per ton lower than at 33rd Street. Prices on December 27 were practically the same as a week before. The new Federal hay grades will be used exclusively in the New York market after January 1. It would be well for every hay shipper to write to the U. S. Bureau of Agricultural Economics, Washington, D. C., and secure a copy of them.

Feed Market Inactive

The Buffalo feed market was quiet and inactive after holiday recess, previous quotations ruling. Corn declined 1 cent per bushel.

Prices quoted by State Department of Farms and Markets December 27 on carlots f. o. b. Buffalo, 100-pound sacks, per ton, follow: Gluten feed, \$44.25 @ 45; cottonseed meal, 36 per cent, \$49.50 @ 50; cottonseed meal, 43 per cent, \$54.75 @ 55.25; oil meal, 33 to 34 per cent, local billed, \$54 @ 54.50; dried brewer's grains, \$49 @ 50; standard spring bran, \$32.30 @ 32.80; hard winter bran, \$33.25 @ 33.80; standard spring middlings, \$31.55 @ 32.05; choice flour middlings, \$35.50 @ 36; white hominy, \$36.30 @ 36.80.

Grain—The following were cash grain quotations per bushel at New York the last week in December: No. 2 red wheat, \$1.41; No. 2 hard winter, \$1.41; No. 2 yellow corn, 91c; No. 2 mixed, 90½c; No. 2 white oats, 56c; No. 3 white oats, 55c; barley for malting, 82 @ 84c; rye for export, \$1.05. At Chicago: No. 2 red wheat sold at \$1.32½ @ 1.34; No. 2 hard winter, \$1.27½; No. 2 white corn, 74 @ 74½c; No. 2 yellow corn, 74 @ 74½c; No. 2 white oats, 45½ @ 46c; No. 3 wheat, 43¾ @ 44¾c; barley, 64 @ 72c; rye, 91½c. Grain prices, Buffalo, per bushel: No. 2 yellow corn, new, 84½c; No. 3 yellow corn, new, 83½c; No. 2 white oats, new, 53c; No. 3 white oats, 51c.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers hold on December 27:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.

Hogs, Yorkers.....	8¼@9½	9

much and chain stores too little for potatoes, and that the jobber must be encouraged with a wider margin than he is now getting, or he will discontinue handling potatoes this season, greatly handicapping distribution.

Receipts of potatoes at New York in week, there was a slightly better decars, of which 79 came from Long Island and 61 from up-State New York.

Sweet Potatoes—During the last week there was a slightly better demand for New Jersey sweet potatoes, owing to the absence of barreled Virginia sweets. Some fancy graded stock went up to \$1.50 per bushel hamper, but most Jerseys sold at 60 cents to \$1.25, depending on quality. The Ocean County New Jersey Sweet Potato Growers' Cooperative Association made its first shipment of graded sweets to the New York market last week. They brought \$1.25 to \$1.50 per bushel.

Cabbage Holds Steady

Old-crop Danish cabbage was in moderate supply in the week before New Year's, and the market was steady, especially for fancy, firm, green stock. Wholesale prices, however, were \$1 to \$2 lower per ton on December 27 than the week before. Best white, bulk, per ton, sold at \$20 @ 22, with a few small sales of fancy green at \$23, ordinary \$18. Red cabbage was slightly more plentiful, but continued at \$45 @ 50 per ton for fancy large. Out of 80 carloads received at New York in previous week, 78 came from New York State.

Onions Moving Earlier Than Usual

As usual, only a small proportion of the bulk of offerings of onions were fancy, well colored and large sized, for which there was a firm market. The best onions were received from Ohio and Indiana, and sold December 27 at \$2.75 @ 2.85 for No. 1 Yellow, best, with

A Half Century of Breeding

THE recent announcements of the coming dispersals of the Holstein herds of Ward and Ralph Stevens, to be held jointly in the Syracuse Sale Pavilion, mark the beginning of the final chapter of an interesting story of Holstein development, covering a period of nearly half a century—the story of the building up of the Stevens herds.

In 1876, one of the Holstein pioneers of the country, Henry Stevens, established the Brookside herd on his farm at Lacona, N. Y. By careful attention to selection of foundation stock and through the use of high-class herd sires, Brookside Herd rapidly became one of the best-known herds in the country. When, in 1894, the system of official testing was first established, the Stevens herd, which had been famous for its unofficial records, immediately took the lead, being the first herd aside from the Michigan State College, to make an official test. The first association prize list, published in 1894, shows that sixteen of the twenty-seven prizes offered went to the herd of Henry Stevens & Sons.

Famous among the foundation cows in the herd was De Kol 2d, the first 26-pound cow. She was the foundation cow of one of the greatest families of the breed. Her blood had been widely scattered through every State in the Union, and her influence had been exerted to a profound degree everywhere. Her stable companion, Netherland Hengerveld, was the next cow to make 26 pounds, and held the world's record for a number of years, while a bull combining the blood of these two, De Kol 2d's Butter Boy 3d, was, until his death, the leading herd sire. Belle Korndyke and her famous son, Pontiac Korndyke; Helena Burke and her son, De Kol Burke; Magadora and her son, Hengerveld De Kol, and others of the greatest animals of that day, were all members of this herd.

Noted Winners in the Show Ring

Among the noted show ring winners developed at Brookside might be mentioned Aaggie Grace 2d's Pietertje, famous also as the first cow in the East to produce over 100 pounds milk in a day on official test; Soldene 2d's Netherland, and his even more famous son, Soldene Clothilde Artis, who was undefeated at many of the largest shows of the East and Middlewest; and, in later years, Jessie Veeman, A., maternal granddam of Sir Veeman Hengerveld, who was sweepstakes cow at the New York State Fair and wherever shown.

Early in the 20th century the herd was divided, a third of the herd remaining on the home farm to be operated by Mr. Stevens, Sr., and his youngest son, Floyd, who carried on the breeding operations for a number of years, the other two-thirds going to Ward and Ralph Stevens, to be operated under the name of the Stevens Bros. Co. In the Stevens Bros. herd were developed King of the Pontiacs and practically all of his A. R. O. daughters.

Partnership Dissolved

Some five years ago, the Stevens Bros. herd was dispersed to dissolve the partnership, the cream of the combined herd going to establish a foundation of two separate herds. The old family name of Brookside was retained by Ralph Stevens. Ward Stevens adopted Wandaga as his herd name. To head the new Brookside herd, Ralph Stevens selected Sir Pontiac Waldorf Pietje, a son of the former Canadian champion, Lady Waldorf Pietje. When his first daughters arrived, they were found to be a most uniformly promising lot. Upon freshening, these daughters proved to have the desired combination of production and individuality.

To mate with the Waldorf daughters, Mr. Stevens selected a maternal brother to May Echo Sylvia, whose name he changed to Radium. The dam of Radium is May Echo Verbelles, who at eight years old milked 700 pounds in a week on official test. He has transmitted much of his own individuality to his offspring, of which there are now 29 daughters and six sons in the Brookside Herd.

The Wandaga herd has been under federal supervision for a number of years. Both herds will be sold under a 60-day retest guarantee against tuberculosis.

Buy New York Holsteins

New York State Breeders Sale

N. Y. State

Jan. 17-18—Fair Grounds—Syracuse

A Sale of State Association Quality;—
Creditable Holsteins, Honestly Sold.

This is the annual mid-winter consignment sale of our Association. Our inspection committees have selected 150 head pure bred Holsteins for this event, principally cows fresh, or nearby, and bred heifers. Over 50 consignors will be represented, including many of New York's leading herds.

The offering will comprise many record animals, including three 30 lb. cows; also a large offering of females without records, of good type and fresh or heavy in calf. Animals of this class may be secured at moderate prices and should appeal especially to dairymen who wish to start a pure-bred Holstein herd at moderate figures.

The sale includes an excellent offering of young bulls from high record dams;—up to 37.61 lbs. butter in 7 days,—includes several with good yearly records.

OUR GUARANTEES

We take every practical precaution to safeguard the buyers' interests. Our veterinarian examines all entries at the time of sale.

Practically every consignment from herds under Federal Supervision, the great ma-

jority with last herd test clean; 60-day retest.

The State Fair Grounds are connected with Syracuse by convenient trolley service and provide an exceptionally sanitary equipment for this event.

NOTE THESE ENTRIES

Our selection committees have secured fifteen bulls from high-record dams. Note breeding of the following:

A ten-months-old son of Spring Farm King out of Homeland Pontiac Sylvia. She has a record of 37.81 lbs. butter from 827.5 lbs. milk, has twice made over 35½ lbs. butter, and has two 30 lb. daughters.

A son of Dutchland Konigen Sir Change-ling out of a 30 lb. dam.

A son of a 28.8 lb. cow, now on yearly test and making 1,000 lbs. butter.

A son of a 29.97 lb. three-year-old.

A son of King Mabel Segis Korndyke, out of a 991 lb. yearly record dam.

A 31 lb. son of Spring Farm King.

A grandson of Anna Lenox DeKol 2nd (35.26 lbs.), out of a 21 lb. Jr. two-year-old daughter of a 29.38 lb. cow.

A Necessary Job in Dairying

Where Have Men Like This Gone?—By Jared Van Wagenen, Jr.

What's under the rubber?

—hidden weakness or rugged strength?

Get the inside story before you buy your boots

There's nothing mysterious about the wear of a boot—

You get just as much wear *out* of it as the maker builds *into* it.

What's built under the smooth rubber surface? Is it rugged strength or hidden weakness?

In the illustrations below we're making just as plain as diagrams can, what's "under the rubber" in a "U. S." Boot.

We've picked out the four points where boots get the hardest wear—ankle, back of the heel, instep and sole.

Notice the strong reinforcements built into U. S. Boots at every one of these points!

We've been making rubber footwear for 75 years. We don't just *buy* rubber—we actually produce on our own plantations the finest grade that

can be grown. Our factories are manned by the most experienced boot makers in the country—craftsmen who know the importance of painstaking care. And we're proud of the results—and of the satisfaction farmers take in them.

Other Footwear in the big "U. S." line—
all built to give the utmost service

You'll find every type of rubber footwear in the big U. S. line. There's the U. S. Walrus, the famous all-rubber overshoe—the U. S. lace Bootee, a rubber workshoe for spring and fall—U. S. Arctics and Rubbers—all styles and sizes for the whole family. Look for the "U. S." trademark whenever you buy—the honor mark of the oldest rubber organization in the world.

THE ANKLE—Here the "U. S." Boot has an extra "collar" that runs all the way around the leg, and on top of that is vulcanized a heavy side-stay.

THE INSTEP—A series of graduated reinforcing layers in the instep combines unusual flexibility with surprising strength.

United States Rubber Company

BACK OF THE HEEL—Eleven layers of heavy duck and highest grade rubber make this one of the strongest points of the whole boot.

Extra heavy flange sole

THE SOLE—A thick, single layer of the finest, toughest high-grade rubber. Its flange shape means extra protection and wear. A rugged outside foxing unites the sole and the upper into one solid piece.

Where Have Men Like This Gone?

A Fireside Reflection on a Preacher of Righteousness.—Jared VanWagenen, Jr.

IN the year 1828 there was called to the service of the Lutheran churches of New Rhinebeck and Sharon in Schoharie County, N. Y., a young minister Philip Weiting. He had been born twenty-eight years before in the Mohawk Valley just a few miles from the locality where his life's work was to be wrought. His father was Rev. John Christopher Weiting, a one time Hessian soldier who either voluntarily, or otherwise had failed of repatriation by the British Government at the close of the Revolutionary war. John Christopher must have lived a somewhat noteworthy and strenuous life. Once a student in a German University, he became a soldier of fortune against the Colonies and later in his new home, a preacher of the Lutheran Church. His ministry was surely not without a certain measure of honor and success, for he preached for nearly a quarter of a century in one charge and was buried in the churchyard, leaving behind him no heritage of wordly goods, but only a widow and fourteen children to buffet the world. It can be mathematically demonstrated from a study of biography or from a tabulation of "Who's Who" that in the race for success and fame the greatest possible advantage that can come to a boy is to be born in a parsonage, and this opportunity Philip enjoyed, even under such untoward circumstances.

Young Weiting was educated for the ministry at Hartwick Theological Seminary—an institution hidden away among the hills at the headwaters of the Susquehanna, in the heart of the Leatherstocking Country, which the magic of Fennimore Cooper's pen has made romantic forever. Hartwick Seminary has had a long and honorable, but never conspicuous history, and comparatively unknown as it is, it probably represents the oldest School of Theology in America. In Weiting's time it was not only a general academy and Theological school, but it was quite as much a mission to the Indians, who still lingered in considerable numbers in central New York, and in its primitive class rooms the sons of the pioneer and the sons of the Red Man plodded through the prescribed courses of study and on its Green there was doubtless the horseplay and bandiage and laughter and song that is the eternal heritage of student youth.

Here Weiting spent some seven years from 1818 to 1825, acquiring all the education that he ever received, and this included some theology and at least a little Greek. Probably he was a well-trained man according to the

standards of his church and time, and yet it must have been singularly narrow and incomplete in comparison with our ideals.

Perhaps it was a good place for him to pass those seven years. It was a country especially rich in historical adventure and romance. Just to the north was Coopers-town and the beautiful lake—Cooper's Glimmerglass. Over the hills a few miles was Cherry Valley with its memories of the Indian Massacre and its more than forty settlers buried in one common grave. Almost in front of the door ran the little Susquehanna, down which in the summer of 1779 General Clinton's army floated in a fleet of

years, I have come to think of him as a great looming figure of a man and before he is forgotten I would like to set down some of these things.

The mere fact of having been a pastor in the same field for forty years is in itself a certain claim to distinction. So far as we can know for all that span he enjoyed to a most unusual degree the love and confidence and enthusiastic loyalty of a great and scattered parish. According to our custom we named him "Dominie"—a title of respect that we give to preachers who are worthy of it—and by that title he lived and died and was the most widely known figure and foremost citizen of three townships.

Of course, his career is rapidly passing into the shadow-land of myth and tradition. Only a little handful of folks is left who were old enough to retain clear cut impressions of his work. I have asked old men what was the secret of his power, only to be answered by returning the same question.

One thing is sure; he was no pale, cloistered ascetic, but a great, athletic lion of a man who laughed often and heartily—who found life full of very pleasant things—who looked upon the world and called it good. I like to think that there was a sort of Martin Luther quality in his mirthfulness. His picture shows a strong, pleasant face with

kindly eyes framed in a great ruff of beard—the face of a man not easily discouraged or made afraid. He mingled easily with all sorts and conditions of men. In the days when feats of strength and wrestling bouts were more common than now, it is said that "no man ever downed the Dominie." There is a story of him that has a very Jean Valjean flavor. Once he was aroused at night by the sound of confusion in his hen roost. He shook himself from sleep, went out unarmed into the night, seized the thief, who squirmed helplessly in that mighty grasp, brought him in the house and set him before the candle, recognized the man, called him by name—and then bade him go and sin no more. There are other stories concerning him that emphasize the abounding physical vigor of the man. He said himself that for the greater part of his ministry he never knew the meaning of illness and scarcely of fatigue.

We can have little definite knowledge of just how he preached or what he said. Of all his thousands of sermons he preserved nothing except his valedictory, which he carefully prepared and wrote out in full,

(Continued on page 26)

The church of our fathers was the most dominant interest in their lives. To-day other things dominate. Why? Read Mr. Van Wagenen's fine story on this page and the editorial on page 24, and let us give thought to the grave problem of the Country Church.

208 flat boats borne on the crest of an artificial flood made by damming the lake and later releasing the impounded waters—perhaps one of the strangest and most original maneuvers in all the long chronicles of war.

Graduating from the Seminary, he was licensed to preach and had a brief pastorate of three years in Lowville, N. Y.—a period that sufficed for him to marry a daughter of the land. Then wisely concluding, it is said, that it was not well for a man to continue to minister in the church from which he has selected a bride, he chose a new field of labor lying something more than a hundred miles to the south.

Thus was uneventfully begun a pastorate which was destined to employ all the energies of his subsequent life and to continue for forty full, unbroken and fruitful years.

I never saw him, for he died two years before I was born, but my father's house was within easy earshot of the church where he did many of his mighty works and in my boyhood his shadow still lay long over the land. As I have heard old men tell of him and as I have gathered some of the stories concerning him that have come down across the

VOL. 111 January 13, 1923 NO. 2

The Ice Harvest

THE picture on our cover reminds us that this is the ice harvesting season. It is practically impossible to produce fluid milk for market without ice. A large amount of bitterness, ill feeling and financial loss always develops in the hot season because milk is not properly cooled. The time is now at hand to save all of this by putting up ice. While the ice harvest is something of a disagreeable job, it is not difficult or expensive even if there is no ice house. A temporary one can be cheaply and quickly thrown together that will keep the ice in very fair shape.

In addition to the need of ice to cool market milk, it can be made to add greatly to the comfort of the family during warm weather. On a hot day, ice-cooled water, tea or lemonade hits just the right spot. Homemade ice cream has the commercial cream beaten for real quality, and the farmer with ice has all of the ingredients at hand to make a high quality cream at home very cheaply.

A Producers' Conference Board

THERE is no business which is more competitive than that of distributing milk and other dairy products to consumers. In spite of this fact, the milk distributors and other dealers are together in a fairly strong organization called the New York Milk Conference Board, and nearly always stand as a unit when it comes to dealing with milk producers. On the other hand, the dairymen whose every interest should urge them to get together, are selling their milk in the New York territory either as individuals or through no less than four milk marketing organizations with little or no cooperation among these different groups. This is a golden opportunity which the organized

dealers make constant use of to play one farm group against the other, to create bitter feeling among producers and to buy their milk at too low prices.

American Agriculturist and others have called attention to this deplorable situation several times, committees have been appointed and conferences have been held to bring about some kind of a workable understanding among the producers' organizations. It certainly stands to reason that if the dealers with their diverse interests can organize a conference board, the producers with their common interest should be able to do the same. But for some reason, little progress has been made.

In all of these organizations it is the farmers' interest that is ultimately at stake and we, therefore, strongly urge producers, no matter to what organization they belong, to bring to the attention of their leaders the need of some kind of unity among the dairymen's organizations. No leader of a farm cooperative has any right to urge individual farmers to cooperate unless he is willing to do his part to bring about cooperation between his organization and others.

One of the Snags of Cooperation

AN unfortunate situation in the affairs of the Monmouth (New Jersey) County Farmers' Cooperative Association, is valuable in the lesson it teaches to other cooperatives. The association, which is a potato sales organization, did a business of more than a million dollars in the first selling year, but propaganda was circulated by its enemies telling its members that the association never would pay them for the potatoes which had been assigned to it. To offset this propaganda the association borrowed from five banks so as to make prompt payment to farmers for potatoes at prevailing prices. These prices were not realized in the final sales, so that the association faced a deficit of \$32,000. It now must go back to the members and ask them for a refund with which to meet this deficit.

Overpayment of members is one of the chief causes of failure of cooperative organizations. One of the things that members of the Dairymen's League Cooperative Association can take pride in, is the fact, that no matter how low the price of milk became nor how great the pressure, never resorted to the poor business practice of paying more for the milk than the current sales justified. Such practice may allay temporary criticism, but sooner or later it is certain to lead to permanent trouble and perhaps to ruin of the cooperative itself.

The Country Church

IN the present day careless attitude toward religion and the church it is hard for us to realize how vital religion and freedom of worship were to our ancestors who settled America. We know that the erection of the little church in every settlement was second only to the log home itself. We read of our fore fathers sitting in the cheerless places of worship for long, tedious hours listening to sermons, and reflecting upon their own sins, and we wonder at the lessening of religious enthusiasm time has wrought.

The church was once a distinctly rural institution; but now in the cities it is secondary to many other things and in thousands of farm communities it has gone entirely. Some of the spirit of our forefathers toward the church is well expressed in Mr. Van Wagenen's wonderful story of the "Country Minister," featured in this issue. Incidentally, this is one of the best pieces of writing on country problems and country life we have seen in many a day, and it brings to mind the old fervor toward the church and the im-

portant part the "domine" played in the past in every farm community.

Why has this old spirit toward the church gone? Why are there few or none of the spiritual leaders such as Mr. Van Wagenen so well describes? Why do we sons hold of so little account, that which our fathers held so dear? Are we less spiritual than they? Or, was the church a man made thing built upon sand unable to change itself to meet change? Are present day sermons too long, dull and uninteresting, or are our minds too filled with shallow sensations to respond to thoughtful suggestion and reflection? Has the church stood too strongly on the technique of its creed and not enough upon service? Is the church too narrow in its attempted guidance of human thought and action? Perhaps the trouble is inadequate financial support: In short, what is the matter with the church, particularly the country church, and what is needed to bring back to the people real religious help and guidance?

For the best letter on this subject American Agriculturist will give a prize of \$10; for the second best letter we will pay \$5; for the third \$3, and we will give \$1 for each of the other letters which we can use. This letter should contain not more than 200 words, should be plainly written and should contain no sectarian discussion. Each letter should be signed, but no name will be signed in any of the letters printed. This contest closes February 15. Winning letters will be published in one of the issues soon after February 15.

The Maternal Instinct in Man

DOCTOR FLORA ROSE of Cornell says that naturally there is just as much maternal instinct in men as in women. The love of children, according to Miss Rose, does not have as much opportunity to develop in men. The necessities of modern life take men out of the home most of the time and the responsibilities of caring for the children bring the mother in constant contact with them, therefore fostering in her the so-called "maternal instinct."

It is unfortunately true that children of these times do not see very much of Father, nor do they get enough masculine association of any kind. The teaching profession is so poorly paid that it contains few men. This does not matter while the children are young, but it does with boys of high-school grade. This, of course, is no reflection upon the splendid influence of women teachers and women in the home. It is only to say that both boys and girls, to be well balanced, need the influence of and association with both men and women.

One of the fine things about farm life, however, and one of the reasons why people from the farms are so uniformly successful is the well-balanced farm home. On the farm the home is the center of the business and as soon as the children, particularly the boys, are able to get outdoors, they come in as much or more contact with Father as they do with Mother.

If business men could get a little more of the influence of little children in their lives, perhaps there would be a little less selfishness and hardness in the world.

Quotations Worth While

Memory is the only paradise from which we cannot be driven.—JEAN PAUL.

* * *

A soul void of thought, like an uninhabited house, soon goes to ruin.—YOUNG.

* * *

I think the first virtue is to restrain the tongue. He approaches nearest to the Gods, who knows how to be silent even though he is in the right.—CATO.

Yes, I Lend My Tools To My Neighbors

But—There Is A String Attached That Brings Them Home Again

THERE are two problems, or perhaps it should be said two ends of one problem, that come to every farmer. They are the problems of lending and borrowing tools. If a man has to borrow tools, he feels as if he ought to lend them. Yet he hates to lend certain valuable machines, for one who does not understand them will do more damage in a minute than can be repaired in a week. On the other hand, no man, unless he has been farming a long time, and successfully at that, is likely to have all the tools he needs for every occasion.

Assuming then that it is necessary to lend some things, one runs up against the difficulty that most neighbors find it far easier to come after a tool than to come back with it. And then some neighbors have a pleasant habit of relending the tools without consulting the owner, and then forgetting where they are. I am the proud possessor of a drag scraper. I needed one, and as no one had one in the neighborhood, I bought a machine which by the way is too small. The medium or large size is better.

One day a neighbor borrowed said scraper, and as usual he failed to bring it back when he was finished with it. Instead he let someone else have it. I did not need it for some months and paid no attention to it. When I did want it, it could not be found.

Some months later, it was found at another neighbor's, some four miles from the first, and by piecing out from both ends, I found that at least five men had had it while it was away. I loaned a fellow a pair of steel triple blocks which have never shown up. I let them go one day when I was in a hurry and not having impressed on my mind who the borrower was, did not make a note of it.

Experiences Demanded Change of Policy

These experiences forced the conclusion on me that something had to be done. I decided to have a new policy in regard to lending things. I had already made it a rule never to lend such tools as binders or corn-binders. If anyone wanted the use of these, he could hire the work done and I would send a man and team. The man would be responsible for the machine. I hired out my manure spreader several times at \$1 a day and the man who took it was to be responsible for all breakage. Well, they always paid for the breakage, but they did not put in the repairs. By the time I put these in for the third time, I swore off on renting this tool out.

There is no more pleasant job than putting in links and slate in a manure soaked spreader—if you like that kind of a job. In letting the spreader, however, I learned one thing. I made the stipulation that the rent

started the day that they took it home and it ran until they brought it back, whether they used it every day or not. I use the spreader every day as long as the cows are in the stable, and every three or four days when they are on pasture. Therefore I do not want to be out the use of the machine any longer than possible. I found out that when the charge ran as long as a machine was away, there was no trouble about its coming back. I decided I would make a

to pay for the use of it. It was inspiring to see the difference in the promptness with which tools came back after this regime went into effect. The time was reduced from months to days.

As to the borrowing end of the problem, I soon found that whenever I borrowed anything, it was about even chances that it would break while I had it. Even if it did not, the trouble of going after it and taking it back was more than enough to pay interest and depreciation on it. So I have bought a pretty full line of tools. I did this before the present high prices however. Those things that I did borrow, I always offered to pay for if it was such a thing as should be paid for. I have made exceptions of my two next neighbors in this, but of no one else.

I have now a hard and fast rule that nothing is to go off the place without my express permission. That does away with having the hired man let something go, and the next year, when there may be a new man, with no one knowing where the tool is.

Rental Avoids Disagreeable Clashes

I have seen some rather disagreeable results of borrowing, which could have been avoided by a business-like arrangement. A neighbor loaned his manure spreader to a fellow and he broke it. He left it standing outdoors for several years, the owner having meanwhile moved away. At last the owner got tired of waiting for the man to fix it and bring it back, as he had continually promised, and finally sued him. He got the value of the machine. If there had been a hard and fast bargain I have spoken of, the owner would have had the machine back in a week or so, and the renter would have been out only the rent and the repairs.

There is one thing that would be a good thing, but which I have never done, and that would be to have a notebook in which the borrower would sign a receipt for the tool, dated. This would do away with

any uncertainty, but with the ten cents a day charge, there is seldom any difficulty. The tool comes back before there has been time to forget.

As to the charge, none of the men that I have loaned to have made any kick. They all agree that if the tool is needed at all it is worth ten cents a day to a man. Some who would not otherwise wish to borrow feel free to do so, and there are a few who do not feel like borrowing under these circumstances. I am perfectly willing to pay for anything I borrow, and in fact would rather do so. I guess the whole thing can best be governed by the golden rule—"Do unto others as you are willing to be done by."—A. H. DE GRAFF, N. Y.

The Importance of New York in American Agriculture—No. 4

The production of hay is not only an important agricultural industry in New York but is prominent in the East in general. New York stands prominent as the largest producer of this crop which amounts to practically 9% of the production of the entire United States. Pennsylvania is also well up among the leaders.

nominal charge for any tool that went off from the place, a charge that would not amount to anything if the tool was returned promptly, and would soon pay for it if kept a few months. The tools most borrowed and kept in this way were a jack and a scraper.

Nominal Rental Charges Bring Tools Home

I made the charge nothing the day the tool was taken and ten cents a day as long after that as the borrower kept it. I simply transferred the worry about the tools coming back from myself to the other fellow.

This charge is not enough to bother anyone wishing the use for a day or two of one of these tools. A man who wants to use one a month should buy one himself, or expect

Shell and Grind with McCormick-Deering Shellers and Grinders driven by Interna- tional Kerosene Engines

EVERY man who grows stock for profit should be equipped to grind the feed. It is not hard work when you have an International Kerosene Engine for power, and McCormick-Deering Shellers and Feed Grinders to do the work. A few hours on a rainy day now and then will give you a supply of nutritious stock food that will add many dollars to your year's profits.

If you will stop in at the store of the McCormick-Deering dealer, he will show you International Kerosene Engines in 1½, 3, 6, and 10 h. p. sizes. And while you are there, ask him about McCormick-Deering Feed Grinders. The shellers are made in sizes ranging from hand shellers to 2 and 4-hole and cylinder power shellers for custom work. The grinders are built in sizes and styles for every farm. Find out about these necessary machines next time you are in town.

Where Have Men Like This Gone?

(Continued from page 23)

and this was published shortly after his death. This farewell sermon was to a considerable extent statistical and historical, and it is the only memorial of his pulpit utterances. Doubtless the fact that he spent more time in the saddle than in the study is a good reason for the scanty written records of his work. There is another reason. It was a time when men with vast approval quoted the scriptural assurance: "For the Holy Ghost shall teach you in the same hour what ye ought to say." In the face of sentiment like this it was a brave man who risked censure by taking a manuscript into the pulpit.

It is to be hoped, however, that nevertheless he avoided the error into which too many have fallen—that is trusting to "spontaneous combustion" at the critical moment, and then failing to have the phenomenon occur. And so it is that while outside of this one sermon hardly a phrase survives, we know that through many years a countryside resorted in great numbers to hear him. Of his appearance and manner there is still testimony. He began quietly, but warmed to his work until in summer when the windows were open the loiterer on the dusty highway had no difficulty in following the thunder of his argument. He had one pulpit mannerism that impressed many and is still well remembered by the few who remain. In moments of excitement he was wont to push his coat and shirt sleeves up to the elbows, suggestive of one who strips for the fray, and then his auditors nudged each other and whispered "now he's getting the Power."

I gather that it was his prayers rather than his sermons that most impressed his people. Certainly they were not always made up of the conventional and decorous phrases that are supposed to voice the desires and hopes and aspirations of the congregation. Men averred that he stood with uplifted face and talked with God. He prayed much when alone and frequently audibly. Two of his church officers are talking together on a Sunday morning. "We're going to have a great Revival soon," "Why?" "The Dominie was praying in the orchard last night."

In his preaching he was fortunate in combining a sort of flaming zeal along with tireless energy and physical vigor that knew no bounds. It was an age when the Church hardly recognized any way of salvation except through the revival meeting and when men craved and demanded an emotional experience of conversion. As his fame increased there was an unceasing demand for his services in these meetings throughout all the adjoining country. For him the one great passion in life was to preach from hilltop church to cross roads school house and go from one community to another—careless of roads and storm, journeyed this weatherbeaten Ambassador of the Kingdom of God. My father has told me how he would have some out-appointment for every night of the week, and in winter would frequently preach in revival meetings for six weeks at a time without a break. Some campaigning that! These meetings were carried on entirely without the machinery of organization, music, committees and the like that go to the making of a modern revival. They succeeded or failed almost absolutely because of the preacher.

Philip Weiting's life and spirit and career were two sided and in that was one secret of his strength. In prayer and preaching he was a rapt crusader, sounding the trumpet of the Lord. In what might be called his other life—his non-ecclesiastical life—he was a man among men—a man of affairs, possessed of unusually sound and sane judgment. This quality was perfectly well recognized. Men came to consult him not only about the welfare of their souls, but quite as often his advice was sought regarding the building of a house or the sale of a farm or the making of a will. Possibly they may sometimes have tired of the flaming preacher, but they were at least always glad to turn to the man of affairs for counsel and guidance.

In his relations with his people there was in some ways something of the priest—something of the man who really felt himself to be a bishop of souls. From various sources I have heard how, when he learned of some

petty quarrel in his congregation—a dispute over a line fence or the trespass of cattle or a too astute horse trade, or some more subtle disagreement that would destroy church unity, it was his custom to go to one of the parties, take him with him in his buggy wagon and drive to the other, and then thrash out the matter together—almost always with the happiest results. Surely it required a man with courage and a sure sense of justice and almost God-given tact to act as a Board of Conciliation for a whole countryside.

It goes without saying that his pastorate of forty years was by no means without its discouragements and discords. Rather early in his ministry—about 1832—there broke out in a group of Lutheran churches in that part of the State a most amazing doctrinal and ecclesiastical controversy which centered about the medieval dogma of transubstantiation. It is strange that a dogma so unrelated to life and so artificial as this could have attracted even passing interest as late as a period within the memory of living men.

It is stranger, however, that hard-headed farmers—men whose fathers fought at Oriskany and Saratoga—men the furthest possible removed from theological training and who supposedly would be interested mainly in the price of wheat and the welfare of their cattle—should promptly take sides in a matter concerning a philosophical abstraction about which no man could positively know anything, and fight for their position as men fight for their hearthstones.

It was a long and bitter controversy, the details of which are buried in the ecclesiastical records of the Franckean and the Hartwick Synods of the Lutheran church, in the forgotten minutes of the churches involved and in the archives of the civil courts of the County of Schoharie. It split Philip Weiting's church through and through, but it is good to know that with sound sense and clear sanity he stood uncompromisingly for the position which modern thought has long since vindicated.

Nevertheless, his party was beaten in the courts and the opposition retained the church property. More than thirty years after in his farewell sermon he recounted the great controversy and estimated that counting the loss of property and legal fees, the cost to the church was not less than ten thousand dollars—a vast sum in a rural community eighty years ago. In that sermon in a single sentence he stated his opinion of the merits of the case—"This was a most wicked and unjust claim that we were compelled to pay." But pastor and church survived the great heresy, and long before his death all parties came to recognize the wicked folly of the quarrel.

Half of Mr. Weiting's ministry was darkened and embittered by doctrinal and denominational disputes and quarrels which he could not escape, and yet left to himself, they would have troubled him very little. His was not the type of mind to concern itself greatly with dogma.

He was essentially a preacher of righteousness. In a day when most laymen and many ministers looked with tolerance, and often with approval on the use of alcohol, he practiced total abstinence and urged it as a cardinal virtue. During the dark days of the Civil War, when some men were faint-hearted and some possibly of doubtful loyalty, he lifted up his voice to denounce the wickedness of slavery and the duty of preserving the Union.

The years of his ministry were crowded with duties and tasks beyond belief. His far-flung parish covered much of northern Schoharie County. In some ways, at least, this was the Golden Age of our farm country, and the remote sections had a much larger population than now. The number of families in his charge was large and the distances were long. As his fame increased, people came to covet the privilege of being married by him and to seek for their dead the honor of burial at his hands, and this brought to him labors beyond the regular round of his parish.

In his farewell sermon there is something of the note of honest pride of a man who lays down a great task well

done. It reminds us of Paul's tremendous declaration: "I have fought a good fight, I have finished my course, I have kept the faith." So in his valedictory, this wayworn man enumerates and catalogues something of his labors during those forty years. He received into church membership 1,250, baptized 1,300, solemnized 800 marriages and officiated at 1700 funeral services. He preached in one year 76 funeral discourses, in one week seven, in one day three. No wonder he cried, "What a multitude have gone before!" He counted "twenty-five distinct revivals of religion" which he had conducted, besides numberless occasions when he had assisted other ministers. Always, somewhere he was preaching, preaching, preaching. The number of miles he traveled—generally in the saddle—sometimes in his buggy wagon, was beyond all computation. Only the hard-driven old-time country doctor could equal him. Surely he had never spared himself or counted the cost. Thus he took leave of his people after forty years of service. Perhaps the man of iron was nearer spent than he knew, for only a year later he was dead. They were were simple country folk, who knew nothing of state funerals, but they buried him fittingly and like an old-time king.

Ours is a community where old habits and customs lingered long, and until a score of years ago when a man or woman died, we immediately tolled the passing bell, and plowmen on distant hillsides halted their team in the furrow and counted the slow strokes as they floated out over the land. We have ceased to do this—why, I do not know. I am sorry that a beautiful custom which linked us with other times has been allowed to fall into disuse. When Dominie Weiting died they carried him some nine miles to sepulchre, and an incredible number of mourners followed in his train. Then there was paid him an honor which I think is absolutely unique in the annals of our county. The way to burial led past several churches, and as each was reached in turn, the bell was tolled as the long procession passed in recognition of the fact that so well-beloved a man was on his last going.

In his parish, in the town of Sharon, remote from any church or hamlet and on a lonely road, is a cemetery where through many years and for many miles the farm folk have come to bury their dead. It occupies a great rolling drumlin that rises out of the Central New York Plateau, and woods and hills and dales and pleasant farm lands lie all about it. The cemetery itself seems a little bleak and windswept, perhaps, for it lies high, but it is most beautiful for prospect. On the horizon are the Adirondacks and the Catskills, and the tumbled and criss-crossed billows of the Hill Country of New York are at your feet. On the very highest point they buried the Great Preacher in the heart of his Kingdom.

It is a most fitting place for his grave, for the scenes of his triumphant labors are all around. Our rural landscape changes only slowly through long years. Doubtless the outlook to-day is very much the same as it was in his time. There are the fields and woods and farmsteads that were mapped in his memory, and the winding, leisurely country roads that he knew so well. Still the slow herds trail across the fields. Still the timothy meadows bow to the breeze and the young corn rustles and dances and gleams in the sunshine. Still the woodlands glow crimson and scarlet and gold in October days serene. Still winter covers all the smiling land with snow. Ever the miracle of the rolling seasons repeats itself again and again as it did during those forty years he gave himself to this community in service.

The trees and the fields and the cattle are with us yet, but there are not so many people. The church perhaps is no longer the unquestioned, dominating force in our country life which it was in his time. In some respects, at least, we have fallen on evil days. If he revisits the scenes of his life work I know he has some disappointments and some sorrows. But he was a great man in our midst for many years, and we are better and richer because he lived and wrought among us, and across the years his soul goes marching on.

"And there arose not a prophet since in Israel, like unto Moses whom the Lord knew face to face."

Let Me Tell You About My New Improved Throttling Governor ENGINE

NEW CATALOG—NOW READY

I HAVE brought out a simple, efficient Throttling Governor Engine. It is particularly desirable NOW, for general power use, and will be in big demand for years to come—when low grade fuels will of necessity be largely used. In producing this new engine, I have worked out every detail of design and construction so as to provide an engine that does not require an expert to handle it—starts without cranking.

Years Ahead—Dollars Better

I consider the New Improved WITTE the most wonderful Throttling Governor engine of its time—the crowning achievement of 38 years of practical engine building experience.

The New Improved WITTE

Is Different—Better—Less Parts—More Power—Less Cost—Operates on Either Kerosene, Gasoline, Distillate or Gas.

New Sizes, 2, 3, 5, 7, 10, 15 and 25 H-P. BOSCH Magneto or Battery as Specified.

Sold on a Lifetime Guarantee—Cash or Terms.

Think of having economical and adaptable power for years to come—an engine so simple in construction a boy can understand it. Power increased or decreased at will by merely turning a thumb screw.

Takes Less Space Weighs Less

Mechanically correct in every particular—every part carefully designed—made of the best materials—accurately machined and easily interchangeable. Superior accuracy and workmanship throughout applies to every engine or outfit in the WITTE line.

Engines and Outfits All Throttling Governor

The WITTE catalog gives complete description of Stationary and Portable Engines—Log and Tree Saws—Cord Wood and Pole Saws—Power Boring Machines—and WITTE "Power-Lite" Plants that furnish both energy and electricity for farm and suburban use.

2 H-P Pulls 2½ at normal speed, or 3 H-P at maximum speed.
COMPLETE, READY TO USE

Oversupply Hits Milk Price

Eastern Farm News From and For the Farmers

BOTH the dealers' and the producers' milk organizations report large increases in the supply of milk. The better prices have evidently encouraged farmers to take better care of their cows and to feed them more grain. This has materially increased the supply. Many cows, of course, freshen also at this time of the year. The market for milk used in Class 2 chiefly in the form of cream is badly over-supplied, with the result that the League has been obliged to reduce its Class 2 price from \$2.90 per cwt. to \$2.70.

AGRICULTURAL MEETINGS

The 35th annual convention of the New York State Association of County Agricultural Fair Societies will be held in the New Court House at Albany, N. Y., Thursday, January 18, 1923, with morning and afternoon sessions. In the evening the annual dinner will be held in the Hotel Hampton.

The following speakers are on the program: Commissioner of Farms and Markets, Berne E. Pyrke; Dr. E. E. Bates of Cornell University; Nat S. Green, Fair Editor of the Billboard; W. J. Vandebilt, Superintendent of Rain Department of the Hartford Fire Insurance Company. Round Table discussions on questions pertaining to fair management will follow the regular speeches. Prominent speakers will be present at the dinner. President Botsford will give an illustrated lecture on "The Wonderland, Alaska."

New York Agricultural Society Holds Annual Meeting

The 91st annual meeting of the New York State Agricultural Society will take place in the Assembly Chamber and Assembly Parlors at the State Capitol, Albany, N. Y., on January 16 and 17. This is the oldest agricultural society in the State, and was established in 1832. It is, in fact, the direct successor of the first agricultural association, organized in New York in 1791.

The program embraces discussion of the most important problems now affecting agricultural progress. The subject of rural education will be taken up and the report of the Committee of 21. The matter of farm finance, marketing and distribution, of interest alike to producer and consumer, have a prominent place on the program. The subject of radio and its farm use and value will be taken up, and part of the program will be broadcasted.

WESTERN NEW YORK NOTES

Forwarding statistics show that more celery has cleared western New York to date than at the same time last year, leaving less in cold storage, as the acreage was not far different from that of 1921. Over 170,000 crates are reported as being held in Wayne County. One year ago the county holdings at this time were in excess of 200,000 crates. Wayne County easily leads the Empire State in celery production.

In Orleans County the Farm Bureau has gone on record as in favor of a dog quarantine. The bureau recommends to the State Department of Farms and Markets that all canines be confined to the premises between the hours of sunset and one hour after sunrise daily for the next year, and that State Troopers be assigned to the work of enforcing such quarantine. The havoc of dogs among sheep flocks of the county calls the growers into a united demand for some relief from the menace.

One of the largest transactions in muck realty has recently been recorded in the purchase of a 500-acre tract near Savannah by Jacob H. Snyder of Sodus. Mr. Snyder has had much experience in this type of farming, at present owning one of the best celery farms in this part of the State.

Much satisfaction was caused in Steuben County this fall by the placing there of the Federal Potato Inspection Service, in charge of Robert Bier of Washington and H. S. Duncan of Sodus. When 700 cars had been inspected the shippers were so pleased

with the service that it was openly advocated that the service should be extended.

Trappers hereabout report that not in years have fur-bearing animals been more plentiful than they are this season. The swamps and streams are said to contain many muskrats and an occasional mink, while skunks are reported to be very plentiful.—ALVA H. PULVER.

Wyoming Co.—On account of the mild weather we had this past fall, farmers were able to clear up their out door work fairly well. The excellent late pastures we had seems to have lessened the demand for hay. At present there is little or no market for potatoes now quoted at 40 to 45 cents a bushel. Coal is very scarce and high-priced. Farmers are drawing green wood for \$5 and \$6 per cord. There is a fair demand for fresh cows and near springers. Dealers are paying 45 cents for dairy butter and 60 cents for strictly fresh eggs.—L. M. F.

Ontario Co.—The month of December was very pleasant with a small amount of cold weather. Stock is doing well, a few head of stock cattle being fattened. Very few hogs or lambs are being fed. Farmers are troubled in getting enough coal to keep them going. The grange work in the county is in a prosperous condition. Farm produce is low in comparison with manufactured goods.—E. T. B.

Chautauque Co.—Farm Institute meetings have been held throughout the county. Attendance has been fair and interest has been keen. Many farmers are talking of selling their cows and going into the poultry business. Dairy-men are voicing much dissatisfaction with the milk situation. Prices realized at the condensaries are less than cheese factory prices and requirements are much stricter.—H. A. NORMAN.

Genesee Co.—Wells and springs that have never been known to fail this summer have gone dry. The situation is very bad especially for those who are feeding lambs and live stock. Small streams have been down to bed rock for a long time, and creeks have been running at dry summer level. During the last week in December many farmers are drawing water a considerable distance in many cases from farm creeks.—W. H.

Allegany Co.—Milk is the big topic of discussion now-a-days. It is impossible to say just which way it is going. There are a lot of potatoes being sold at from 45 to 50 cents a bushel. Not much hay is being sold; it is now bringing around \$15 a ton. Beans are bringing \$8 to \$10 per cwt.—T. E. B.

ALONG THE MOHAWK AND THE HUDSON

Montgomery Co.—Farm Bureau and Farmers Institute meetings are being held. Milk prices are generally satisfactory. No hay is moving to market as there is practically no demand and prices are extremely low. Buckwheat is now selling at \$1.90 a cwt. With the price of milk feeds, buckwheat should bring no less than \$2. Milk seems to be the only product that is bringing ready money regularly. As a result only milkers are bringing a good price. Strippers and old cows are way down, bringing as low as \$10 to \$15 depending on size. During the middle of December veals and Bob calves were in active demand. Eggs are now selling at 60 cents a dozen. Beef, 10 to 12 cents, pork, 12 to 14 cents. Subscribers appreciate the improvement in the editorial department of the American Agriculturist. The acquisition of Mr. Eastman and Jared Van Wagenen are valuable assets. The efforts of Dean Cook have long been acknowledged the bulwark of the paper, his letters beaming with practical information. We consider the Agriculturist a valuable paper in every household.—G. P. VAN VALKENBURG.

Washington Co.—The first real blizzard reached here on December 29. Many roads drifted, fully stopping milk teams and the U. S. Mail. Things are

quiet in general. Hay is selling at \$14 to \$16 F. O. B., rye straw \$20. Not much enthusiasm over the milk business, fresh cows, feed and help are high. Many farmers are producing lots of eggs. Stores are now paying 50 cents a dozen. There have been several auctions, but sales are not as satisfactory as in recent years.—F. P. P.

Schnectady Co.—We are all enjoying good sleighing and the ground is dry. Most farmers are drawing water for their stock. Cutting wood is the order of the day. Butter is 45 cents a pound, eggs, 75 cents a dozen, buckwheat, 85 cents a bushel. Hay is bringing \$13 to \$14 a ton, beef, 7 cents a pound.—**JOHN W. GORDON.**

Orange Co.—December was very cold. Since the middle of the month we have had excellent sledding. Wells, ponds and streams are dry on many farms, and farmers are compelled to draw or haul water for stock. Cows are selling at public sales for around \$125. Potatoes are bringing \$1.25 a bushel, eggs 75 cents a dozen. "Brooks Bridge," the last covered bridge in Orange County and a landmark since 1840, has been torn down and replaced by a steel and concrete structure.—Mrs. W. Y. SEAMAN.

NORTHERN NEW YORK NOTES

Jefferson Co.—Hay is now selling from \$12 to \$15 according to quality and the buyer. Oats brought 48 to 52 cents at the car door during the latter part of December. Many shipments are being made to farmer cooperatives. The chief subject of discussion is the future of the milk business. It is the chief topic of conversation among poolers and non-poolers. The county conference of grange masters and lecturers will be held in Watertown on January 16 to discuss the 1923 program. Discussions of the factors entering into the make-up of farm business and suggestions for local application were held in four communities during the latter part of December by the farm and home bureau and grange. Another series of these meetings will be held during the week of January 22. The change in the management and policy of the American Agriculturist is eliciting much interest and favorable comment.—W. I. ROE.

Franklin Co.—A special drive is being made for new members by the Farm Bureau. There seems to be more satisfaction now with the price paid for dairy products than in some time. More farmers seem to be going into winter dairying. The potato market is most discouraging. Shippers paying only 40 cents. A great deal of wood is being cut and sold. It is bringing \$3.50 to \$4.00 a cord.—H. T. J.

IN CENTRAL NEW YORK

Onondago County—At the annual meeting of the Onondago County Farm and Home Bureau Association held on December 1 the new by-laws were adopted. The membership fee for the Farm Bureau was left for the time being at \$3. The election of the executive committee was handled in accordance with the new by-laws, the following men being elected: For three years, A. L. Brockway, Syracuse; R. E. Deuel, Manlius; for two years, W. A. Parsons, Geddes; W. T. Thorne, Skaneateles; for one year, Charles Hotchkiss, Amber; James Alvord, Kirkville; John W. Brown, Warner; C. M. Goodspeed, Skaneateles.

The annual meeting of the members of the Accredited Herd Association was held in the Assembly Hall of the Court House Tuesday, December 19. The records show that a total of 135 herds have been under inspection, comprising 3,600 head of cattle. Of this number 858 animals reacted to the test and were removed from the herds. Twenty-four herds were accredited, six times as many as last year, and 22 herds have passed the first test.

Taking a farm inventory is a short, simple job and a very paying one. Incidentally it is an extremely interesting one also for it always brings out some surprises about the farm business. Your State College of Agriculture or your County Agent will furnish the few directions needed, and the colleges usually also have the blank forms for setting down the items.

An Efficient Combination

E-B has always pioneered in the development of better implements. E-B built the first successful four cylinder kerosene burning tractor. Today the E-B 12-20 Tractor is the most economical type for the farmer to buy. Its 12 horse power at the drawbar and 20 at the belt are ample for every farm use, and you can depend on it for steady power wherever needed. In efficiency it stands supreme.

E-B Power-Lift Tractor Plows are built especially for use with E-B 12-20 tractors but work equally well with any tractor. Self-lift feature enables one man to operate both tractor and plow—a single pull on the rope lifts or lowers the bottoms.

Equipped with E-B Quick Detachable Shares—the only shares that can be changed by hand in 5 seconds—no bolts, nuts or tools required.

Ask your E-B dealer or write us for full information

As necessary as stable manure

A good farmer would be astonished if you questioned his wisdom in using manure.

Manure is all right as far as it goes, but it fails to give the phosphoric acid your land needs, and does not usually give nitrogen or potash in the proportions required by crops whose needs for food differ.

Learn the truth about feeding your crops. Experiment stations have proven beyond question the common sense and profit in the use of commercial fertilizers. Properly used, they will profit you by increasing your yield per acre; improving the grade of your grain, hay and truck; maturing crops sooner; saving labor cost, and building up your soil.

Pullets For Winter Laying

MOST of us at this season are laboring with one object in view—namely, more winter eggs and how to get them. Then, no two poultry raisers are following, altogether, the same methods whereby to obtain them. But I am, indeed, glad to note that each year more and more poultry owners and farmers are learning that an important step toward a greater egg yield is the keeping of first-class or pure-bred stock.

The breed you have—if it is a pure-bred—makes little difference, whether Wyandotte, Plymouth Rocks, Rhode Island Reds or Leghorns. Any of them, properly fed and cared for, will prove profitable layers, although the majority of poultry authorities agree that the Leghorns are the best layers. But on the farm, where poultry raising is only a side-line, I know from experience that many breeds other than the Leghorns will prove to be more profitable. I prefer the Rhode Island Reds or Plymouth Rocks.

It has been my experience that pullets hatched in April or May make the best winter layers. But bear in mind, if they are neglected and improperly fed during the growing period and thereafter they will not pay for their keep through the winter, no matter what the breed may be. We try to so arrange it that the pullets are not allowed to range with the other fowls of different ages, and especially the young cockerels. Crowding in small pens or houses is particularly bad. Experience teaches us that there is no profit in crowding poultry of any age or description. However healthy and profitable your flock may be, as soon as they are crowded into pens or houses that are too small, they will soon become the most diseased and unprofitable flock ever owned.

I am fully convinced that pullets confined in roomy pens will thrive far better than when allowed to run with the rest of the flock. If they are penned, or on free range, don't fail to keep a good supply of fresh, clean water, grits or coarse gravel always before them. There is far more danger in not giving the growing and laying fowl sufficient food than in overfeeding. Mash always before the birds is most desirable.—W. H. HARRISON.

The Kind of Cow That Sells

Current Experiences on a Dairy Farm—H. E. Babcock

NOWADAYS buyers of dairy cows, whether of grades or purebreds, seem to be looking for size and type. In fact, many seem to be carrying the search for the straight top line and the well balanced udder so far that they lose sight of other characteristics more important from a production point of view. One prominent breeder of purebred Holsteins rather sarcastically summed this up when he said that by the time sale committees got through picking animals from his herd for State sales he wouldn't have any poor producers left.

While the pendulum may have swung too far, no real dairyman regrets the desire on the part of buyers for a better looking as well as a good producing dairy cow. As we have observed the really skillful buyers select animals from our herds we have noticed that they were willing to pay good money for animals which possess these qualifications: First, a cow large for the breed; second, a cow with a straight topline and a well-balanced udder; next a cow with good milk and udder vein development. Very few feel of the cow's hide—the few that do are the experts.

I have heard of a prominent Holstein breeder, one of the pioneers, who was blind, yet who was a master judge of a cow. I believe it would be better for all of us if we abandoned the use of our eyesight occasionally and depended more on our finger tips. Some day spend a little time to note the difference in the feel of the hides of your good and poor cows. Then watch the really skillful buyer operate the next time he looks over your string of milkers.

TAKING THE INVENTORY

Sometimes when I have been asked if we would make any money on the farm I have replied: "It all depends on how optimistic we feel when we inventory." And though said in jest, there is a world of truth in that answer.

On a dairy farm there is sometimes more money invested in cattle than in the farm itself. Even with grade cattle values fluctuate considerably and are largely dependent on the condition of the animals, the price of milk, and the financial state of dairymen. When purebreds are considered—particularly on farms where advanced registry testing is carried on—the correct determination of values at inventory time becomes a real problem.

In business the usual procedure is to inventory at cost or market, whichever may be lower. An attempt to apply this principle to valuing cattle at once brings up the question, what is the market?

Public Auction Prices a Guide

For dairy cattle, grades or purebreds, there is probably no better gauge of values than the prices paid at public auction. Incidentally, perhaps here is the real reason why farmers always go to an auction. At least it will make a good reason to tell your wife the next time you go.

At the public auction, provided it is on the square, men register their collective judgment as to the worth of an animal. By selecting typical animals as to age, condition, size, and quality, and by noting what they bring, a man can get a pretty good idea of the value of similar animals he may own. Auction prices should always be discounted from five to fifteen per cent, however, because it usually costs that much to advertise and sell the animals.

Another good gauge of prices is the offers that buyers make for animals. Usually, however, trade is not active enough to draw much information from

this source and in a large herd there are always some dairy animals which are unsalable as such and that at a given time are only worth beef prices but which, if carried along, will recover their dairy value. Taken all in all the question is a complex one.

Practical Examples of Values

In an endeavor to get a correct inventory this year I have selected typical animals in our herds and traced back our values for the past two years. Here are the way the figures look:

Flossie Lehigh, purebred Guernsey, born 1911. 1921 value \$250, 1922 value \$225, 1923 value \$200. This cow a

good producer and a steady breeder is getting old. We would not sell her for \$200, but on the other hand few men would buy her for that figure.

May, grade Guernsey, born 1915. 1921 value \$150, 1922 value \$150, 1923 value \$100, sold \$150. This cow, a nice, large cow which would give 50 lbs. a day was just going dry when inventoried Jan. 1, 1922.

Flossie of Meadowbrook, purebred Guernsey, born 1915, cost 1921, \$275; 1922, \$200; 1923, \$35. A number of ailments have prevented this cow ever doing anything for us. She may come through, but to-day we are only safe in inventorying her at beef value.

Mary, grade Holstein, born 1915; 1922, \$150 (cost); sold for \$225. An example of a top-notch, well bought, correctly inventoried, and well sold.

Korndyke Sadie Pietje, purebred Holstein, born 1919; bought 1921, \$175; inventoried 1922, \$175; 1923, \$175. This cow is growing better, but the market on purebred Holsteins of her class is weak, hence we shall make no increase in value.

Dutchess, grade Holstein, born 1915; bought 1922, \$150; inventoried 1923, \$100. This is the cow shown in the picture. She is sound, freshened October 1, is milking 60 lbs. a day. Is our inventory value correct?

Our Conclusions as to Values

Taking our herds as a whole, we will value about as follows this year: Purebred Guernsey cows, four to ten years old, of good size and type, will average about \$250; good grade Guernseys \$150. Purebred Holsteins, four to eight years old, which will milk 12,000 lbs. a year or better, we will value at \$200; grades of the same quality \$100 to \$150. A few smaller grade Holsteins which we bought this fall at auction for an average of \$95 apiece, we shall put at \$75 each.

Where we are doing advanced registry testing we shall make no recognition of the increased values that may be due to records. We have yet to realize on such values, and bitter experience has taught us that there is many a slip between the record and the sale check.

In herds where there is tuberculosis we should value the cows at the State indemnity figures plus estimated carcass values. We recognize that these estimates are conservative, but we don't like to "kid" ourselves into making money; we had much rather earn the cash.

Retained Afterbirth—Often follows underfeeding. In well-fed cows it is usually an indication of diseased genital organs. It is often associated with contagious abortion. Give a warm bran mash a couple of hours after calving, keep the cow warm and give her a physic if the afterbirth does not come away readily. If it does not come away in about six hours, attach a two-pound weight to it. If, after forty-eight hours, it is still retained, it should be taken away at once by an experienced person.

These Three made a World's Record

Mr. R. R. Stevens, of Bowmanville, Ont., with the assistance of a De Laval Milker, just recently made a world's record with his purebred Holstein cow *Orndyke Pietertje Korndyke*, who produced 1,122.5 lbs. of butter and 24,119 lbs. of milk in 305 days. During the entire period she was milked with a De Laval Milker. Mr. Stevens says:

"While *Orndyke* is a wonderful animal and would make a splendid showing by hand milking, I can truthfully assert that the use of the De Laval Milker throughout this test has made it possible for her to show this wonderful production. I have been using the De Laval Milker exclusively for two years."

Mr. Stevens also has other champions in his remarkable herd, most notable of which are *Ormsby Jane*, junior two-year-old milk champion of Canada, and *Jane DeKol of Glen Rae*, senior two-year-old milk champion of Canada, both of which have never been milked in any other way but with a De Laval Milker. Mr. Stevens says:

"I am very proud and naturally much gratified over my success in producing these champion animals, but it is only right that I should give the De Laval Milking Machine its full dues as the most important agency in the development of these records. These facts are all beyond question and should settle the matter conclusively for those intelligent dairymen who are asking the question as to whether the De Laval Milking Machine will pay them."

Thousands of De Laval Milker users in all parts of the country and with all breeds of dairy cattle will subscribe to Mr. Stevens' statements, many of whom have also made splendid records.

You may not be interested in making production records but you certainly want to get the most milk from your cows, in the cleanest condition, at the least expense, and you can do this with a De Laval better than in any other way. Sold on easy terms so that it will pay for itself while you are using it.

CRAINE SILOS

give three-fold protection to your silage. They keep warmth and juices in and keep cold and weather out.

Every square inch of a Craine Silo is protected against stress and strain in any direction.

You can tell a Craine from any other wood silo. Smooth and handsome. No hoops to tighten or loosen. Once up, a Craine stays put. Craine Silos are cheapest to own.

Send for illustrated catalog.

Any old stave, iron hooped silo can be rebuilt into a Craine 3-wall Silo at about half the cost of a new one. Catalog shows how.

CRAINE SILO CO.

Box 120 NORWICH, N. Y.

Do You Want to Earn Money to Help Out on the Shortage From Farm Receipts?

Quite a few farmers who have had a bad year are supplementing their farm income by doing some special sales work for the good old American Agriculturist in their own county.

If you feel that \$25 or \$50 extra per week would be a desirable addition to your income, why not start acting as our special subscription representative during the next few months.

Even though you have had no previous experience in selling, you surely know the farmer's need for the American Agriculturist with its many recent improvements. In selling American Agriculturist to new readers you are really conferring a favor on every man whose subscription you secure.

Write us to-day for our new proposition to farmers who wish to increase their regular income by acting as our subscription representatives.

A Service for Veterans

WE all start in life meaning to be successful. It is hard to imagine a young boy just tackling the problem of finding his place in the world deliberately expecting to become a public charge, or to be taken care of by relatives.

Several insurance companies have collected some statistics which are very interesting, and which show that the opportunity for success does not come to all alike. Of 100 men starting out in life at the age of 25 years, one at the end of 40 years will be wealthy, four will have incomes, five will have earning power, 36 will be dead and 54, or more than half, will be dependent on their relatives or charity.

It is the U. S. Veterans' Bureau which especially calls to our attention the striking figures just quoted. This Bureau extends to veterans with a record of service to the government an insurance which all too many have disregarded. During the war, Congress passed a piece of progressive legislation which had no parallel in our previous history. The idea—to insure under the most liberal terms those who served in government forces—was one which carried great benefit not only to the men themselves, but to their families and dependents. Yet a great number of veterans have overlooked the opportunity which this bill gives them to protect themselves and their families, and it is for this reason that the Veterans' Bureau is making an effort to line up the delinquents and help them to their duty to themselves and families.

Very Liberal Renewal Terms

Policies will be renewed if they have been allowed to lapse, or new ones will be issued on extremely liberal terms. Premiums are charged at rates lower than any other insurance which gives the same benefits. The premiums may be arranged for endowment policies paid during the lifetime of the individual or for policies made out to the benefit of relatives after death.

There are six different sorts of policies, and they all contain such liberal features as the allowance of 31 days for the payment of premiums without interest; application of premium dividends earned to the principle; no obligations of residence or occupation, and so forth.

Although Americans are apt to be extremely careful in looking out for their property, they are not nearly so careful in looking out for themselves. A man is far more apt to insure his building against fire than to insure his own life for the benefit of those dependent on it. Perhaps this is due to the natural human feeling that something will happen to the other fellow, but that we ourselves are immune. At any rate, when the table showing what happens to the 100 men is compared with the fire risks there is an interesting contrast. Fifty-four out of 100 men would at the end of 40 years be dependent on outside help. Yet, out of 1,260 homes insured, 1,210 will be standing intact at the end of 50 years. In other words, only 50 houses out of 1,260 will be destroyed and the insur-

BEES

HONEY—Strictly pure, first quality, extracted clover-basswood. 10 lb. pail \$1.75; 5 lb. pail 90 cents delivered anywhere. THOS. BRODERICK, Moravia, N. Y.

AGENTS WANTED

AGENTS—Our soap and Toilet article plan is a wonder. Get our free sample case offer. HO-RO-CO., 177 Locust St., St. Louis, Mo.

How to Become Reinstated

American Agriculturist is therefore very glad to join the government authorities in urging veterans of the World War to avail themselves of the insurance thus extended to them. All those who have not taken out the policies to which they are entitled are urged to write to the U. S. Veterans' Bureau at Washington, D. C. The application need only say, "Please forward information relative to the reinstatement of my insurance." Sign it, giving your name and address in full, certificate number and serial number of your insurance if you carry any, and your rank and regiment at the time of your discharge. State also whether you are now incapacitated.

A USELESS BOOK RETURNED

Mrs. F. J. F. of New Jersey, was unable sometime ago, to resist the blandishments of a salesman with a medical book. She agreed to take it finally, although at first she refused to take it as she had one along the same line. His assurance that they would guarantee the return of her money finally convinced her. Mrs. F. soon found the book quite useless to her. She wrote the company, but was told that she would have to allow a year to elapse before she could claim any refund. As she has the support of four small children on her hands, she felt that she would like to have the \$8.75 at once.

The company at the solicitation of the American Agriculturist, agreed to waive their usual requirements and at once sent her the money order for the full amount. Mrs. F. who had previously written us that the American Agriculturist was extremely valuable, sent in her renewal of her subscription and expressed her gratitude and appreciation.

SPECULATION AT THEIR BEST

Financial Department:—Would you consider the C. L. Chester Productions, office in the Candler Building on 42d St., New York City, a good investment for two thousand dollars? The Chester Production is to be enlarged and merged with a new concern to be known as the Wheelers' Corporation of America. This new concern is issuing notes or bonds, bearing 8% interest payable May 1 and November 1, in denominations of \$500 and \$1,000.—W. L., New Jersey.

We do not recommend this investment. The motion picture business at its best is very uncertain. We have been unable to get a financial statement from the company. You would do much better if you considered good public utilities.

LEAVE THIS KIND ALONE

Financial Department:—Do you believe it is safe to put a share in the United Stores of Pennsylvania?—Mrs. F. H., Pennsylvania.

We have no record of this company. A receiver was appointed for the United Auto Stores in February 1922. We are informed the company is about to be reorganized. Better leave all such propositions alone.

Choosing the Farm Radio

Factors That Determine the Set for Best Results

As announced recently, American Agriculturist has made arrangements with several radio experts to prepare special articles on buying, making and operating the radio. These articles are in reality a progression and when complete will constitute a fairly comprehensive treatise on the construction and operation of the radio. Readers who are interested in radio should keep these articles especially, in order to refer back to previous instructions. This is the first of the series and is written by Brainard Foote, radio expert on the staff of the New York Evening Mail. During the war Mr. Foote was Master Signal Electrician in the United States army. Readers of American Agriculturist who are interested in radio and desire information on the construction or purchase of apparatus are invited to submit their inquiries to the Radio Department of the American Agriculturist.

AS a fad and novelty, radio has had its rise and its fall during the past year. As an indispensable aid to business and speedy exchange of information it is now finding its true position. The city dweller has experimented with radio, wasted money thoughtlessly, while the farmer has wisely waited for radio to reach a settled basis before entering a field which holds such bright prospects of pleasure and profit and yet which may be a thorough disappointment through unreliable guidance.

By virtue of location, the farmer has an immeasurable advantage over the city man as far as actual results are concerned. While the countless steel structures and electrical wiring systems of city and suburb greatly weaken the radio impulses before they reach aerial wires strung upon apartment houses, no such obstructions oppose the operation of radio in the country. Thus a set that is only fairly sensitive will bring in dozens of broadcast programs every evening in a country location, and the user of the set may jump at will to the one he likes the best.

Serves Many Practical Purposes

While the farmer's radio outfit will be used more for entertainment than for any other purpose, there are several utilitarian features which a live-stock raiser or produce grower finds of utmost importance. Practically all of the important broadcasting stations and especially those in agricultural districts, broadcast stock market reports several times daily. Many farmers have found these of incalculable value in selecting the psychological time for shipment.

Radio information of this character is far superior to the telegraph not only in speed but in completeness. Then for news of the nation and of foreign countries, radio is often several days ahead of metropolitan newspapers, since important happenings are broadcasted immediately. Farm bureaus are now making extensive use of radio to supplement their regular meetings. Advance information of the spread of an insect pest, or plant disease, is given along with late bulletins on methods of control. Many colleges now are including lecture series broadcast on definite schedule as a part of the college curriculum. Daily weather reports are of value as well.

Factors Determine the Choice of a Set

As a comfortable and convenient form of entertainment, there is little that will compare with radio. Radio will while-away long winter evenings, will provide an outlet for the energy of restless son or daughter, and will bring from hundreds of miles away the songs and stories of a dozen different cities. Cold weather is a tonic for radio waves, and thus, in winter when the farm folks have most time on their hands, they may receive over the longest distances and hear the greatest number of broadcasting stations. It is then that they may "tune in" WWJ of the Detroit News and receive a dance program; or pick up KYW of Chicago, broadcasting an opera from the Chicago Opera House; or with a shift of the dial catch WEAJ in New York City.

The choice of the farmer's radio outfit is a matter deserving careful consideration together with the conditions under which the set will be operated. How near is the nearest broadcasting station? How near are the broadcasting stations in which he is most interested? Has he a clear stretch of about 125 feet available for an aerial? Does he wish to listen with telephone re-

ceivers on his head or would he prefer to hear speech and music around the room as with a phonograph? Has he facilities for having a storage battery charged or would he like to use the new style of vacuum tubes which are lighted by dry batteries? Are there any commercial coast stations within 25 miles exchanging messages with ships which would be likely to interfere with clear reception of the message?

If there is a broadcasting station not over 20 miles away, the simplest form of receiving set is the "crystal" set using the "crystal detector" which gives satisfactory results with head telephones. No batteries are needed and there is no expense for upkeep. The crystal is a mineral so employed that it has the power to transform the radio impulses picked up by the aerial wire into intelligible sounds in the head telephones.

Tube Set More Sensitive Than Crystal

The vacuum tube is a far more sensitive detector than a crystal, when connected in what is known as a "regenerative" circuit. It is so called because the instruments are connected to use over again some of the current flowing through the head telephones. A "non-regenerative" vacuum tube is not greatly superior to the crystal. But when "regenerative" the reliable working range is about 40 miles daytime and 200 miles at night. Darkness has a beneficial effect on radio waves so that distances up to 1000 miles are usually covered by a regenerative one-tube receiving set in a country location.

Vacuum tubes may be added to "amplify" the signals or increase their sound as picked up on the detector. In general, any broadcasting heard clearly with headphones on one vacuum tube may be amplified or intensified by two additional vacuum tubes so that a group of people may hear it without wearing the telephone receivers. Then a horn may be placed over the receivers to form a "loud speaker," or the phonograph may be pressed into service for this duty. Either of these will give as good results as the loud speakers on the market which use an ordinary type of headphone. There are however, loud speakers using telephone reproducers of especially heavy build which will do the amplifying job somewhat more satisfactorily.

Two Classes of Tube Sets

There are two general classes of vacuum tube receiving outfits. Where there are no broadcasting or commercial stations nearer than 30 miles, a simple form of set may be used. This is called the "single circuit," and has one or two control knobs. It is easy to operate, and quick. However, if there are two nearby broadcasting stations, let us say within 30 miles, and some commercial stations as well, it is advisable to make use of the other type of set known as the "two-circuit." While more complicated in adjustment, it is far more selective and capable of eliminating or "tuning out" practically all unwanted stations. Either of these may be supplied with additional vacuum tubes in a unit, termed a "two-stage" amplifier. If standard vacuum tubes are employed, a six-volt storage battery of at least 80 ampere-hours capacity will be needed, but if the new "dry-cell" tube is desired, results will be not quite as good with the amplifier, and dry batteries are used. There is also a form of amplification in which vacuum tubes are used to amplify the radio impulses before they are made audible by the detector. This is "radio frequency" amplification, and will increase the strength of distant signals. Such additional expense need not be undertaken by the country dweller, since he is unhampered by poor location.

A Word About Costs

A home-made simple crystal set, including all accessories, should not exceed \$15 in cost. A good set of this type may be purchased for about \$25. A single tube regenerative receiver, with all accessories, should amount to about \$40 if home-made and about \$75 if purchased outright. With the two-

A radiant bride at twenty—at twenty-five—what?

Is the Husband or Wife to Blame?

Is the husband or wife to blame for the tragedy of too many children?

Margaret Sanger, the great birth control advocate, comes with a message vital to every married man and woman.

THOUSANDS upon thousands of women today marry with the bloom of youth upon their cheeks. A few years of married life rub the bloom off. Children come, too many. And instead of the energetic, healthy girl we have a tired and bedraggled young-old woman. Why do women allow marriage, the holy thing, to work this wicked transformation?

MARGARET SANGER, the acknowledged world leader of the Birth Control movement and President of the American Birth Control League, has the answer for this most momentous problem of womankind. Every married woman knows only too well the tragedies resulting from ignorance of birth control.

Why should a woman sacrifice her love-life—a possession she otherwise uses every resource to keep? Why does she give birth to a rapid succession of children, if she has neither the means to provide for them nor the physical strength properly to care for them?

Partial List of Contents

- *Woman's Error and Her Debt.
- Two Classes of Women.
- Cries of Despair.
- *When Should a Woman Avoid Having Children?
- Birth Control—A Parent's Problem or Woman's?
- *Continence—Is It Practicable or Desirable?
- *Are Preventive Means Certain?
- *Contraceptives or Abortion?
- Women and the New Morality.
- Legislating Woman's Morals.
- Why Not Birth Control Clinics in America?
- Progress We Have Made.

*Any one of these chapters alone is worth many times the price of the book.

provement—that finally shut her out from the thing she cherishes most: her husband's love.

In blazing this revolutionary trail to the new freedom of women, this daring and heroic author points out that women who cannot afford to have more than one or two children, should not do so. It is a crime to herself, a crime to her children, a crime to society. And now for the first time Mrs. Sanger shows the way out. And she brings to the women of the world the greatest message it has been their good fortune to receive.

"Woman and the New Race" is a book that will be read wherever womankind struggles with the ever-present danger of too many children. It is a startling, mighty revelation of new truth, a work that will open the eyes of tired, worn, womankind. It can with truth and honesty be called woman's salvation.

Every woman in the country should have a copy of this remarkable and courageous work. For this reason we have arranged a special edition of "Woman and the New Race" at only \$2.00 a copy.

Send No Money

The book is bound in handsome, durable gray cloth, has artistic black lettering and is printed from large type on good paper. It contains 286 pages of priceless information. To have it come to you, merely fill in and mail the coupon below. It is sent to you in a plain wrapper. When "Woman and the New Race" is delivered to you by the postman, pay him \$2.00 plus postage—but send no money with the coupon. There will be an unprecedented demand for this edition, which will soon be exhausted, so you are urged to mail the coupon now—at once.

The Valley of the Giants—By Peter B. Kyne

WHEN Bryce Cardigan, son of a pioneer in the redwoods country, comes home to Sequoia from college, he finds his father, now almost blind, engaged in a struggle against an aggressive newcomer, Colonel Pennington. Bryce, who has started a friendship with the Colonel's niece, Shirley Sumner, vows to rescue his father's business and especially to preserve the Valley of the Giants, a magnificent grove where his mother is buried, and which, because it blocks the Colonel's holdings, is menaced by the new operator.

On his first visit to the Valley of the Giants, he discovers that the noblest tree has been wantonly cut down for the burl, and that in falling, it has destroyed his mother's grave. An envelope with the name of Jules Rondeau proves that Pennington's woods-boss was the vandal. At Shirley's invitation Bryce has dinner with her and the Colonel, and conveys to the latter that he knows who stole the burl. The next morning Bryce goes to the Colonel's logging camp and just as he has whipped Rondeau till he confesses, Pennington appears and sets the woods-crew of twenty on young Cardigan.

A MAN of that indiscriminate mixture of Spaniard and Indian known in California as *cholo* swept the circle of men with an alert and knowing glance. His name was Flavio Artelan, but his straight black hair, dark complexion, beady eyes, and hawk nose gave him such a resemblance to a fowl that he was known among his fellows as the Black Minorca, regardless of the fact that his sobriquet was scarcely fair to a very excellent breed of chicken. "That offer's good enough for me," he remarked in businesslike tones. "Come on—everybody. A month's pay for five minutes' work. I wouldn't tackle the job with six men, but there are twenty of us here."

"Hurry," the Colonel urged them.

Shirley Sumner's flashing glance rested upon the Black Minorca. "Don't you dare!" she cried. "Twenty to one! For shame!"

"For a month's pay," he replied impudently, and grinned evilly. And I'm takin' orders from my boss." He started on a dog-trot for the timber, a dozen men after him.

Shirley turned helplessly on her uncle, seized his arm and shook it frantically. "Call them back! Call them back!" she pleaded.

Her uncle got uncertainly to his feet. "Not on your life!" he growled, and in his cold gray eyes there danced the lights of a thousand devils. "I told you the fellow was a ruffian. Now, perhaps, you'll believe me. We'll hold him until Rondeau revives, and then——"

Shirley guessed the rest, and she realized that it was useless to plead—that she was only wasting time. "Bryce! Bryce!" she called. "Run! They're after you. Twenty of them! Run, run—for my sake!"

His voice answered her from the timber: "Run? From those cattle? Not from man or devil." A silence. Then: "So you've changed your mind, have you? You've spoken to me again!" There was triumph, exultation in his voice. "The timber's too thick, Shirley. I couldn't get away anyhow—so I'm coming back."

She saw him burst through a thicket of alder saplings into the clearing, saw half a dozen of her uncle's men close in around him like wolves around a sick steer; and at the shock of their contact, she moaned and hid her face in her trembling hands.

Half man and half tiger that he was, the Black Minorca, as self-appointed leader, reached Bryce first. The *cholo* was a squat, powerful little man, with more bounce to him than a rubber ball; leading his men by a dozen yards, he hesitated not an instant but dodged under the blow Bryce lashed out at him and came up inside the latter's guard, feeling for Bryce's throat. Instead he met Bryce's knee in his abdomen, and forthwith he folded up like an accordion.

THE next instant Bryce had stooped, caught him by the slack of the trousers and the scruff of the neck and thrown him, as he had thrown Rondeau, into the midst of the men advancing to his aid. Three of them went down backward; and Bryce, charging over them, stretched two more with well-placed blows from left and right, and continued on across the clearing, running at top speed, for he realized that for all the losses already inflicted on his assailants, the odds against him were insurmountable.

Seeing him running away, the Laguna Grande woodsmen took heart and pursued him. Straight for the loading donkey at the log-landing Bryce ran. Beside the donkey stood a neat tier of firewood; in the chopping block, where the fireman had driven it prior to abandoning his post, was a double-bitted axe. Bryce jerked it loose, swung it, whirled on his pursuers, and rushed them. Like turkeys scattering before the raid of a coyote they fled and from a safe distance turned to gaze apprehensively upon this demon they had been ordered to bring in.

Bryce lowered the axe, removed his hat, and mopped his moist brow. From the center of the clearing men were crawling or staggering to safety—with the exception of the Black Minorca, who lay moaning softly. Colonel Pennington, seeing his fondest hopes expire, lost his head completely.

"Get off my property, you savage," he shrieked.

"I'll get off—when I get good and ready, and not a second sooner," Bryce returned soothingly. "In fact,

I was trying to get off as rapidly as I could when you sent your men to bring me back, Colonel."

He started toward Pennington, who backed hastily away. Shirley stood her ground, bending upon Bryce, a cold and disapproving glance. "I'll get you yet," the Colonel declared from the shelter of an old stump behind which he had taken refuge.

"Barking dogs never bite, Colonel. And that reminds me: One more cheep out of you, my friend, and I'll go up to my own logging-camp, return here with a crew of bluenoses and wild Irish and run your wops, bohunks and *cholos* out of the county. I don't fancy the class of labor you're importing into this county, anyhow."

The Colonel, evidently deciding that discretion was the better part of valour, promptly subsided.

The demon Cardigan halted beside Shirley and stood gazing down at her. He was smiling at her whimsically. She met his glance for a few seconds; then her lids were lowered and she bit her lip with vexation.

"Shirley," he said. "You are presumptuous," she quavered.

"You set me an example," he retorted good humoredly. "Did you not call me by my first name a minute ago?" He glanced toward Colonel Pennington and observed the latter with his neck craned across his protecting stump. He was all ears. Bryce pointed sternly across the clearing, and the Colonel promptly abandoned his refuge and retreated hastily in the direction indicated.

The heir to Cardigan's Redwoods bent over the girl. "You spoke to me—after your promise not to, Shirley," he said gently. "You will always speak to me."

SHE commenced to cry softly. "I sloathe you," she sobbed.

"For you I have the utmost respect and admiration," he replied.

"No, you haven't. If you had, you wouldn't hurt my uncle—the only human being in all this world who is dear to me."

"Gosh!" he murmured plaintively. "I'm jealous of that man! However, I'm sorry I hurt him. He is no longer young, while I—well, I forgot the chivalry my daddy taught me. I give you my word I came here to fight fairly——"

"He merely tried to stop you from fighting."

"No, he didn't, Shirley. He interfered and fouled me. Still, if I had known you were a spectator I think I should have controlled myself. I shall never cease to regret that I subjected you to such a distressing spectacle. I do hope, however, that you will believe me when I tell you I am not a bully, although when there is a fight worth while, I never dodge it. And this time I fought for the honor of the House of Cardigan."

"If you want me to believe that, you will beg my uncle's pardon."

"I can't do that. He is my enemy and I shall hate him forever; I shall fight him and his way of doing business until he reforms or I am exhausted."

She looked up at him, showing a face in which resentment, outraged, and wistfulness were mirrored. "You realize, of course, what your insistence on that plan means, Mr. Cardigan?"

"Call me Bryce," he pleaded. "You're going to call me that some day anyhow, so why not start now?"

"You are altogether insufferable, sir. Please go away and never presume to address me again."

He shook his head. "I do not give up that readily, Shirley. I didn't know how dear—what your friendship meant to me, until you sent me away; I didn't think there was any hope until you warned me those dogs were hunting me—and called me Bryce." He held out his hand. "And I'll be a good friend to you, Shirley Sumner, until I have earned the right to be something more. Won't you shake hands with me? Remember, this fight to-day is only the first skirmish in a war to the finish—and I am leading a forlorn hope. If I lose—well, this will be good-bye."

"I have you," she answered drearily. "All our fine friendship—smashed—and you growing stupidly sentimental. I didn't think it of you. Please go away. You are distressing me."

He smiled at her tenderly, forgivingly, wistfully, but she did not see it. "Then it is really good-bye," he murmured with mock dolorousness.

She nodded her bowed head. "Yes," she whispered. "After all, I have some pride, you know."

"As you will it, Shirley." He turned away. "I'll send your axe back with the first trainload of logs from my camp, Colonel," he called to Pennington.

ONCE more he strode away into the timber. Shirley watched him pass out of her life, and gloried in what she conceived to be his agony, for she had both temper and spirit, and Bryce Cardigan calmly, rather stupidly (she thought) had presumed on brief acquaintance. Her uncle was right. He was not of their kind, and it was well she had discovered this. It was true he possessed certain manly virtues, but his crudities by far outweighed these.

The Colonel's voice broke in upon her bitter reflections. "That fellow Cardigan is a hard nut to crack—I'll say that for him." He had crossed the clearing and was addressing her with his customary air of expansiveness. "I think, my dear, you had better go back into the caboose, away from the prying eyes of these rough fellows. I'm sorry you came, Shirley. If I had thought—but how could I know that scoundrel was coming here to raise a disturbance? And only last night he was at our house for dinner!"

"That's just what makes it so terrible, Uncle Seth," she quavered.

"It is hard to believe that a man of young Cardigan's evident intelligence and advantages could be such a boor, Shirley. However, I, for one, am not surprised. You will recall that I warned you he might be his father's son."

"I wonder what could have occurred to make such a madman of him?" the girl queried wonderingly. "He acted more like a demon than a human being."

"Just like his old father," the Colonel purred benevolently. "When he can't get what he wants, he sulks. I'll tell you you what got on his confounded nerves. I've been freighting logs for the senior Cardigan over my railroad; the contract for hauling them was a heritage from old Bill Henderson, from whom I bought the mill and timber-lands; and of course as his assignee it was incumbent upon me to fulfill Henderson's contract with Cardigan, even though the freight-rate was ruinous."

"Well, this morning young Cardigan came to my office, reminded me that the contract would expire next year and asked me to renew it at the same

rate. I offered to renew at a higher freight-rate, and explained that I could not continue to haul his logs at a loss. Well, right away he flew into a rage and called me a robber; whereupon I informed him that since he thought me a robber, perhaps we had better not attempt to have any business dealings with each other—that I really didn't want his contract at any price, having scarcely sufficient rolling-stock to handle my own logs. That made him calm down, but in a little while he lost his head again and grew snarly and abusive—to such an extent, indeed, that finally I was forced to ask him to leave my office."

"Nevertheless, Uncle Seth, I cannot understand why he should make such a furious attack upon your employee."

THE Colonel laughed with a fair imitation of sincerity and tolerant amusement. My dear, that is no mystery to me. There are men who, finding it impossible to make a physical attack upon their enemy, find satisfaction in poisoning his favorite dog, burning his house, or beating up one of his faithful employees. Cardigan picked on Rondeau for the reason that a few days ago he tried to hire Rondeau away from me—offered him twenty five dollars a month more than I was paying him, by George! Of course, I promptly met Cardigan's bid and retained Rondeau; consequently Cardigan took the earliest opportunity to vent his spite on us."

The Colonel sighed and brushed the dirt and leaves from his tweeds. "Thunder," he continued philosophically, "it's all in the game, so why worry over it?"

A groan from the black Minorca challenged her attention. "I think that man is badly hurt, Uncle," she suggested.

"Serves him right," he returned coldly. "He tackled that cyclone full twenty feet in advance of the others; if they'd all closed in together, they would have pulled him down. I'll have that *cholo* and Rondeau sent down with the next trainload of logs to the company hospital. They're a poor lot and deserve manhandling——"

They paused, facing toward the timber, from which came a voice, powerful, sweetly resonant, raised in song. Shirley knew that half-trained baritone, for she had heard it the night before when Bryce Cardigan had sung for her a number of expurgated lumberjack ballads, the lunatic humor of which had delighted her exceedingly. She marvelled now at his choice, for the melody was hauntingly plaintive—the words Eugene Field's poem of childhood, "Little Boy Blue."

The little toy dog is covered with dust,
But sturdy and stanch he stands;
And the little toy soldier is red with rust,
And his musket molds in his hands.
Time was when the little toy dog was new,
And the soldier was passing fair;
And that was the time when our little Boy
Blue,
Kissed them and put them there.

"Light-hearted, isn't he?" the Colonel commented. "And his voice isn't half bad. Singing to be defiant, I suppose."

Shirley did not answer. But a few minutes previously she had seen the singer a raging fury, brandishing an axe and driving men before him. She could not understand. And presently the song grew faint among the timber and died away entirely.

Her uncle took her gently by the arm and steered her toward the caboose. "Well, what do you think of your company now?" he demanded gayly.

"I think," she answered soberly, "that you have gained an enemy and that it behooves you not to underestimate him."

CHAPTER XVII

THROUGH the green timber Bryce Cardigan strode, and there was a lilt in his heart now. Already he had forgotten the desperate situation from which he had just escaped; he thought only of Shirley Sumner's face, tear-stained with terror; and because in his ears there still sounded her frantic warning, he realized that however stern her decree of banishment had

(Continued on page 35)

been, she was nevertheless not indifferent to him. And it was this knowledge that when his song was done, brought to his firm mouth his old whimsical smile, to his brown eyes a light of confidence and pride.

The climax had been reached—and passed; and the result had been far from the disaster he feared ever since the knowledge had come to him that he was doomed to battle with Colonel Pennington, and that one of the earliest fruits of hostilities would doubtless be the loss of Shirley Sumner's friendship. Well, he had lost her friendship, but a still small voice whispered to him that the loss was not irreparable—whereat he swung his axe as a band-master swings his baton; he was glad that he had started the war and was now free to fight it out unhampered.

UP hill and down dale he went. Because of the tremendous trees he could not see the sun; yet with the instinct of the woodsman, an instinct as infallible as that of a homing pigeon, he was not puzzled as to direction. Within two hours his long, tireless stride brought him out into a clearing in the valley where his own logging-camp stood. He went directly to the logging-landing, where in a listless and half-hearted manner the loading crew were piling logs on Pennington's logging-trucks.

Bryce looked at his watch. It was two o'clock; at two-fifteen Pennington's locomotive would appear, to back in and couple to the long line of trucks. And the train was only half loaded.

"Where's McTavish?" Bryce demanded of the donkey-driver.

The man mouthed his quid, spat copiously, and pointed. "Up at his shanty," he made answer, and grinned at Bryce knowingly.

Up through the camp's single short street, flanked with the woodsmen's shanties, Bryce went. Dogs barked at him, for he was a stranger in his own camp; children, playing in the dust, gazed upon him owlishly. At the most pretentious shanty on the street Bryce turned in. He knew it to be the woods-boss's home, for the house was painted with coarse red paint, while a fence of pointed pickets painted white inclosed a tiny garden in front. As Bryce came through the gate, a young girl rose from where she knelt in a bed of freshly transplanted pansies.

BRYCE lifted his hat. "Is Mr. McTavish at home?" he asked.

She nodded. "He cannot see anybody," she hastened to add. "He's sick."

"I think he'll see me. And I wonder if you're Moira McTavish."

"Yes, I'm Moira."

"I'm Bryce Cardigan."

A look of fright crept into the girl's eyes. "Are you—Bryce Cardigan?" she faltered, and looked at him more closely. "Yes, you're Mr. Bryce. You've changed—but then it's been six years since we saw you last Mr. Bryce."

He came toward her with outstretched hand. "And you were a little girl when I saw you last. Now—you're a woman." She grasped his hand with the frank heartiness of a man. "I'm mighty glad to meet you again, Moira. I just guessed who you were, for of course I should never have recognized you. When I saw you last, you wore your hair in a braid down your back."

"I'm twenty years old," she informed him.

"STAND right where you are until I have looked at you," he commanded, and backed off a few feet, the better to contemplate her.

He saw a girl slightly above medium height, simply gowned in a gingham dress. Her head was well formed; her hair, jet black and of unusual lustre and abundance, was parted in the middle and held in an old-fashioned coil. Moira was a decided brunette, with that wonderful quality of skin to be seen only among brunettes who have roses in their cheeks; her brow was broad; in her eyes, large, and lustrous, there was a brooding tenderness not untouched with sorrow. Her lips were slightly parted in the adorable Cupid's bow which is the inevitable heritage of a short upper lip; her teeth were white as Parian marble.

The A B C of Washing

Elizabeth Johnston Tells How to Simplify This Often Unwelcome "Chore"

IT would be foolish for me to pretend that the family washing is not hard work, because you know as well as I that it is. There are, however, a few tricks that will help a little, and though you may know some, you may not have heard of all of them.

For convenience we will divide the work into three heads, family wash, woolens and silks. First let's talk about the family wash. Lots of people who have no washing machines just gather the clothes up and begin to rub them, but if you have never tried it you will be surprised at the effect of a little soaking. Of course, it isn't safe to try that with colored clothes, and you would want to divide the white clothes into two groups—the "body-clothes," and the others.

Put the clothes to soak the day before you wash, rubbing the soap directly on the specially soiled places, such as wrist-bands, neck-bands and skirt-hems. Use warm water if possible. You cannot safely soak your clothes in tubs with iron fittings or in galvanized iron tubs that have a break

should be mixed thoroughly with the water by squeezing it through a cloth, and that starch will dissolve only in hot water.

There are only two more suggestions that I have to make about the family wash, and one of those is that you soak the stockings in soapy water for an hour or two before washing time. Black, dark brown and dark blue stockings can be put in the same water. You will probably find it convenient to let them soak in a pail while you are doing the rest of the wash. As with the other clothes, this softens the dirt and saves some of the rubbing. The other suggestion is that you use a brush on the men's soft collars. You know how hard it is to remove the line of dirt that comes at the fold, but I think you will find a clean brush quite a help.

Care in Washing Woolens

In washing woolens, including blankets, the whole secret lies in using a very pure soap and tepid water. You can use either a cake or soap flakes (soap chips), but purity is absolutely

the yellowing as long as possible. If you will wrap a cake of blueing in a piece of cloth and squeeze a little of it into each water into which you put the silks, including the rinsing water, you will find that your silks will stay white longer. You all know that sunlight will bleach cotton goods, but unfortunately that same sun will turn silks yellow, and so wet silks should never be put in the sunlight. I have found it best, whenever possible, to iron the silks, soon after washing, without waiting for them to dry and then sprinkling them. If you have a wringer you should be able to get them dry enough to iron immediately. You can get the same effect by squeezing the silks as dry as possible by hand and then placing them in a clean, dry bath towel and squeezing them again. You all know that a dirty or burned cover on the ironing board is apt to soil the clothes you iron on it, but this is particularly true of silks. A moderately hot iron is best.

LAUNDRY WORK IN WINTER

MRS. GEORGE GRAY

Women who would be horrified at the thought of committing suicide, weekly take their lives in their hands while doing the family washing. Many times I have seen women hanging up clothes on a winter's day with arms bare to the elbow and a little cap the only covering for the head, while the hour previous had been spent over steaming tubs.

A few minutes spent in "cooling off" will be profitable. There are always little things that may be done at this time. When you go out, be prepared for the exposure; wear overshoes, a coat, hood and loose white gloves. I always keep a pair of heavy canvas gloves in my clothespin bag, and they are not used for any other purpose. If the clothespins are placed in the oven or warming closet they will do much to make the task more pleasant, and the lines should be in place.

There is nothing to be gained by hanging colored clothes outdoors. In the house they will dry more rapidly and be ready to iron before the white clothes are dry. There is usually an unused room where they may be hung.

Many people make a practice of hanging white clothes inside to dry, but I find they soon become yellow and cloudy. If the day is unfavorable I leave them in the basket, ready to hang

"FIRST AID" FROM AN EXPERT

MISS JOHNSTON, who is an expert chemist, has personally tested and analysed practically all the washing compounds on the market. Her experience is both practical and scientific—in fact, a great New York concern annually buys thousands of dollars worth of such supplies on her recommendations.

Her advice to the housewife is therefore unusually valuable and "The A B C of Washing" has been prepared especially for American Agriculturist readers.

necessary. Never under any conditions use a soap powder or washing powder on woolens because these powders contain a large percentage of washing soda, which is very injurious to any woolen material. Ivory Soap, Wool Soap, Fairy Soap, are all good; among the soap flakes, Lux, Ivory Soap Flakes and Fab are three of a number of good brands.

Make a heavy lather with the flakes. The amount to use depends upon the size of your tubs and the hardness of the water. Hard water requires more soap than soft. The soap will dissolve and lather more quickly if you add the hot water first and beat it up with an old eggbeater or fork, adding the cold water afterwards. But if you do this, be sure to add enough cold water to make the tub full tepid; it is better to have the water slightly cool than warm. Put the wool things into the water, souse them up and down, and squeeze them between your hands in order to force the soapy water through them. After a few minutes of this treatment rub any specially soiled spots gently by hand until clean and then repeat the first treatment for several minutes more, or until clean. Put the woolens through a wringer or squeeze the soapy water out by hand, but do not wring by hand because the twisting of the fibers is not good for wool or silk. Put the woolens into tepid rinse water and rinse thoroughly. This usually requires two rinse waters, but I think you will find it pays to use more if necessary in order to be sure that all the soap is removed. If soap is left in, your woolens will be more apt to pick up the dirt and in the long run will not wear as well.

When You Wash Silk

Of course, you know that some silks cannot be laundered at all, but wash-silks are as easily laundered as the woolens and in the same way. But there are a few precautions which may be taken to prevent the white silks from turning yellow—or, rather, to delay

up, or in a tub of water. No harm results from either course in cold weather. Clothes should not be out in a strong wind, particularly if the temperature is freezing. The whipping damages them more than the wear. But when the day is quiet, it is a joy to see them hanging over the snow, whitening from the effects of the ammonia in it and the sun above. Delicate articles may be put in a cheesecloth bag and hung in the open.

The days being so short, I find it is a great saving of time to soak the clothes over night, using warm water and a good soap. Often many pieces will be ready for the rinse water in the morning. Having the starch made is another help.

Freezing fades delicate colors and cracks linens, so this sort of garment should not be exposed.

The Convenient Kitchen—Does Yours Approach This Model?

This model kitchen, exhibited by the Home Economics Department of the New York State College of Agriculture, shows washing machine, dish washer, and refrigerator, operated by electricity generated by an over-shoot water wheel. The kitchen is arranged in correct order to save steps

in the galvanizing, because, if you do, you will make yourself more work taking out rust-stains. Dripping faucets are also dangerous if you have the usual iron pipes, because the drip will make a rust stain on the clothes which are directly under the faucet. But if the drip is very slow you can use the tub for soaking if you tie several thicknesses of rag over the mouth of the faucet after letting in the water. These rags then catch the rust-stains.

If you have a washing machine, put the clothes in and wash them according to the instructions with that particular make. If you haven't a machine boil your clothes next, using the appropriate one of these two formulas:

1. For Soft Water—½ cake of Fels Naphtha Soap, 2 teaspoonfuls borax, piece of paraffin the size of a pea.

2. For Hard Water—½ cake of Fels Naphtha Soap, 2 teaspoonfuls washing soda, piece of paraffin the size of a pea. (Wyandotte Sanitary Cleaner and Cleanser or Dominion Cleaner and Cleanser may be used instead of washing soda.)

Any good grade of laundry soap will do as well as Fels Naphtha, but you can judge about how much to use from the size of the Fels cake. Dissolve these materials in a saucepan full of boiling water. It will save time to cut the soap into small pieces first. When the mixture is dissolved, pour into the boiler of hot water and then put your clothes in and boil for fifteen or twenty minutes. Put the clothes into cool water and examine carefully for any spots. An unvarnished wooden pole will be convenient for handling the hot clothes. There will probably be a few dirty spots, and these will have to be rubbed by hand, but I think you will find that the soaking and boiling have so softened the dirt that it will not take long to remove the spots. Rinsing, blueing and starching remain, but I am not going to suggest anything about those, because I am sure you have already been warned that blueing

Hot Breads Always Popular

Recipes Which Are Variations of Old Favorites

WE like to pretend that pancakes are a small boy's special favorite, but, as a matter of fact, every member of the family has a sneaking fondness for this typically American dish. Some prefer them with melted butter, others use only maple syrup, which seems, after all, the most suitable combination. But some vote that a mixture, composed of butter, white or brown sugar and cinnamon, brings out the flavor most delightfully.

Whatever one's preference in the matter of sweetening, hot griddle cakes are welcome on every table. Two variations of the usual recipe have been furnished by American Agriculturist readers, and should be given a tryout on every subscriber's table this winter.

Oatflake Pan Cakes

This recipe is vouched for as "splendid" by Mrs. E. B. Austin, of Machias, N. Y. Her directions read:

Soak 2 cups of oatflake in 2½ to 3 cups sour milk over night. In the morning add 1½ cups flour, one teaspoon baking powder, 1 teaspoon salt, 2 teaspoons sugar sifted together. Then add one or two slightly beaten eggs. Pancakes are very good if eggs are omitted. Just before baking the cakes add 1 teaspoon soda dissolved in 2 tablespoons hot water.

Mrs. C. E. Aldrich, of Canandaigua, N. Y., says she can highly recommend a recipe in which graham flour is used:

Graham Griddle Cakes

One pint of graham flour, 1 pint of wheat flour, 1 tablespoon syrup, 1 egg, salt, 2 teaspoons baking powder, 1 pint sweet milk.

Put the milk in a baking dish, beat the egg, add pinch of salt, then syrup, then the sifted flour. Beat all briskly, bake on a good hot griddle.

Different ways of making bread or muffins are also welcome as a variation

smooth. Bake in well-heated oven ¾ of an hour. When done it cleaves slightly at sides of tin and will hiss on bottom of tin if tried with a wet finger as you remove from oven.

FOR THE HEAVY FIGURE

The time has gone by when the stout woman tried to disguise her waist by wearing clothes that fitted as tightly as possible. Someone discovered a few years ago that this only accentuated the extra pounds of flesh, and the up-to-date stout woman now dresses in loose, simple garments, without marked waistlines and with long panels, which give a much more becoming effect.

No. 1511 is an example of the best type of gown for the stout figure. It is a pattern that may be used for almost any sort of material, and can be made in a tailored style with the close-fitting

sleeves, or they may be flare. The flare sleeve is most becoming to the woman with large hips.

No. 1511 cuts in sizes 34, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 36 requires 3¼ yards 40-inch material with 1¾ yards 21-inch contrast-

MY DREAM SHIPS

CLARA E. PUTNAM

I sent my ship a-sailing away across the sea,
Into the Happy Country to find a dream for me.
The sunbeams pierced the water and frolicked with the foam,
I sent my ship a-sailing, but I—I stayed at home
And fashioned baby dresses with dainty ruffled skirts,
The softest fluffy blankets; wee, cunning little shirts;
I asked the nesting robin, I prayed the cooing dove
To bring their mother secrets, the wisdom of their love.

* * *

And when the purple twilight had touched the sunset rim,
With all its precious cargo my ship came sailing in.
Oh, take your silks and spices, your diamonds and your pearls,
I'd rather have the sunlight that kissed my baby's curls.
Some day my ship goes sailing again across the sea
Into the Happy Country to find a dream for me;
Its prow will cut the water and toss the shining foam;
I'll breathe a prayer for safety until my ship comes home.

on the usual loaf. Nut bread, because of its nourishing value, as well as its delicious taste, is rapidly becoming a popular addition to the everyday dinner. Miss Z. E. Berdan, of Paterson, N. J., supplies a recipe which should be easy to use:

Nut Bread

Three-quarters cup sugar, 1 egg, 1 cup milk, 4 teaspoons baking powder, 1 teaspoon salt, 1 cup chopped nuts, 4 cups flour.

Mix all dry ingredients, then add milk, eggs and nuts. Put in pan and let rise for ½ hour before baking, or put in gem pans and let rise 5 minutes and bake from 15 to 20 minutes.

Corn Muffins

As a reliable standby, corn muffins cannot be excelled. Mrs. Ida A. Brown, of Elmira, N. Y., furnishes a "tried and true" list of the proper ingredients to use.

One and one-half cups of flour, two teaspoonfuls baking powder, ¾ cup corn meal, ½ teaspoon salt, 3 tablespoonfuls sugar, 1 cup milk, 1 well-beaten egg, 3 tablespoonfuls warm shortening.

Sift flour and baking powder, then add the dry ingredients, and pour in the wet ingredients. Stir all briskly until

ing; 2¾ yards binding and 4 yards ribbon for sash. Price 12 cents, stamps or coin.

To Order: Write name and address clearly, enclose 12 cents for each pattern ordered, and mail order to Fashion Editor, American Agriculturist, 461 4th Ave., N. Y. C. Our Winter Book of Fashions is still available. It contains over 300 styles for all members of the family. It is 10 cents a copy.

TO MEND PORCELAIN

"In your paper of Oct. 14th you mention an inquiry as to how a cracked earthen jar could be mended. I have a porcelain pitcher which belonged to my grandmother. Two years ago the handle was broken off close to the pitcher. I remembered reading in some magazine to tie broken pieces together and boil several hours in skim milk, and then, after cleaning, to set it away for several months. Usually a broken dish is a loss, but as I treasured this one I followed directions and as a result have been using my precious pitcher for a year and a half. The article did not say how much fun you would have cleaning the kettle the milk and dish are boiled in for that length of time, so I won't."

Reviewing the Latest Eastern Markets and Prices

BULK OF APPLE RECEIPTS ARE GREENINGS

THE bulk of the supply of barreled apples in the market last week were Greenings. There was considerable accumulation of barreled stock from N. Y. State in the market.

The total carlot shipments of apples from all producing points within the United States this season up to January 1, 1923, was 79,073 carloads compared with 73,407 cars to the same date last year.

Market reports on apples use the term "best" as meaning the best of the general receipts. The term "fancy" is applied only to those very exceptional packs where the goods are of very superior quality, carefully graded and free from all blemishes. Such goods are superior to the minimum requirements of the New York law for Grade A. "Ordinary" is the common stock barely meeting minimum Grade A requirements not uniform good size, nor up to market standard as to color or freedom from blemishes.

These terms will be used in regular quotations on this page during the rest of the apple-shipping season, as in the following table of wholesale prices at New York January 4:

APPLES	Best	Fancy	Ordinary
Baldwin...	\$4.75@5	\$5.25@5.50	\$4 @4.50
Greening...	4 @4.25	4.50@4.75	3.50@3.75
McIntosh...	7.50@8	8.50@9	6 @7
N. Spy...	6.50@7	7.25@7.50	5 @6
Ben Davis...	3 @3.25	3.50	2.50@2.75

The market for pears most of which are now Kieifers continued very dull. Best Kieifers sold at \$3.00 to \$3.50 with a few sales of fancy large at \$3.75 to \$4.

Potato Market Dull After Holidays

Except for a little better demand just before New Year's the potato market at New York has been generally dull with plenty of potatoes moving from the country on the slightest prospect of higher prices. Most New York State growers have been getting 45 cents a bushel, with a few very fancy bringing 50 cents.

At the 33rd St. N. Y. City yard 150-pound sacks on January 4 were selling, not freely, for \$2 each. Bulk State round whites No. 1 per 180-

pounds mostly \$2.50 for best. Long Island Green Mountains, per 180-pounds bulk, mostly \$3.50 to \$3.65.

The total carlot shipments of potatoes in the country this season up to January 1, was 154,800, only a little in excess of the 152,245 cars shipped last year up to the same date, in spite of the larger crop.

Demand for Cabbage Improving

There were very few cars of cabbage in the yard on January 4, and the demand was improving. The best Danish brought \$25 per ton in Harlem. Some up-state shippers are holding for \$20 per ton f. o. b. which is too high to stimulate much movement. Carlot shipments of cabbage in U. S. up to January 1, were 34,391 compared with 26,994 to same date last year.

Onions continued to find a steady market, with prices for No. 1 yellow

lower than in 1921, the decline was not as great as with most other farm products. The following average wholesale prices received for butter in New York City for the last five years were compiled by the principal trade market reporting agency: 1922, 40.58 cents; 1921, 43.25; 1920, 60.144; 1919, 60.72; 1918, 52.30.

Included in the year's receipts of butter at New York were at least 20,000 packages from Canada, and 27,260 casks of 112 pounds each from Denmark. The high tariff of 8 cents per pound caused imports to fall off considerably in 1922, and the total importations were about 4,000,000 pounds.

The cold storage holdings of butter in the four large markets on January 3 were 14,835,806 pounds, compared with 32,974,153 pounds on the same date last year. Receipts of butter at New York up to January 3 this year

average value of \$4,250 per car, making a total value of \$51,000,000. Estimating an average weight of 3½ pounds to each bird, the total number of birds exceeded 62,000,000. All this poultry was Kosher dressed in the poultry slaughter houses and consumed chiefly by Jewish people. Their per capita consumption of poultry was close to 90 pounds per person.

All during the year the supply was in excess of normal demand. Wholesale dealers and shippers both claim they have made no money on poultry business here last year. Competition resulting from the effort to move oversupply cut the margins down so that profits were small.

Country Dressed Calves Meet Good Market

Country dressed calves have found a much better market outlet since the holidays, and have been fairly plentiful. Small veals and lower grade calves, however, brought irregular prices, and did not move as regularly as better qualities. Dressed lambs were steady for fancy hot house, but poor grades sold slowly at irregular prices. The following quotations are for January 4: Calves, prime, 16 @ 17c; fair to good, 11 @ 15c. Lambs, dressed hot-house, per carcass, 9 @ 12c. Pigs, 8 to 12 pounds, per pound, 30 @ 40c; 14 to 20 pounds each, per pound, 20 @ 30c.

Hay Market Continues Dull

Market continues weak and trade dull. The following quotations are based upon the new U. S. Hay Grades, which are now in effect in the New York markets. Copies of the grade specifications can be obtained from the U. S. Bureau of Agricultural Economics, Washington, D. C. Official inspections to determine quality and condition will in the near future be based upon these grades, and can be obtained on application to Richard J. O'Brien, New York Hay Exchange, 601 West 33rd Street.

	No. 1	No. 2	No. 3

Heavy Clover mixed (not more than 90% grass).....	17@21		

Feed and Grain Quotations

Buffalo Market—Wholesale prices in carlots f. o. b. Buffalo, 100-pound sacks, were practically the same on January 3 as quoted in last week's issue, except for choice flour middlings, which were 50 cents ton lower. Straight grains were all lower, and quoted: New No. 2 yellow corn, 82c bushel; No. 3 yellow corn, 81c; No. 2 white oats, 51½c; No. 3 white oats, 49½c.

The following were the cash grain quotations per bushel at New York: No. 2 red wheat, \$1.35; No. 2 hard winter, \$1.35; No. 2 yellow corn, 90½c; No. 2 mixed, 90c; No. 2 white oats, 54½ @ 54¾c; No. 3, 53½c; rye for export, \$1.02¼; barley for malting, 81 @ 83c. At Chicago: No. 2 hard winter, \$1.17½ @ 1.19½; No. 2 white corn, 71 @ 71¾c; No. 2 yellow corn, 70¼ @ 72c; No. 2 white oats, 43 @ 43½c; barley, 60 @ 71c; rye, 87¾ @ 88c.

Horse Market Starts Year Active

January opened with an active market, prices \$25 to \$50 higher on good, serviceable animals than at the close of last year. At New York, fresh western horses, sound and fully serviceable, sold the first week in January at \$165 to \$250 for weights over 1,300 pounds; \$140 to \$215 for lighter weights. Second-hand, sound farm horses sold around \$190 for average weights, particularly good animals going as high as \$225. The spring horse market in New York City opens about February 1, and lasts until early May.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers hold on January 4:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.
Hennery, whites, extra fancy.....	55@57
Extra first.....	53@54
Firsts.....	51@52	51@53

Hogs, Yorkers.....	9¼@9½	8½@9¼

slightly higher than a week ago, best, \$2.65 to \$2.75 per 100-pound bag. Receipts comparatively light. Carlot shipments to January 1 for whole country were considerably greater than last year, 23,090 cars this year, compared with 17,339 last.

Sweet potatoes advanced last week for a few days, then dropped again with much larger receipts. New Jersey basket sweets principal supply now. Quality of many shipments is poor. Prices ranged from 90 cents to \$1.65 during week, but on January 4 most sales were \$1.15 to \$1.25 per bushel.

Celery offerings from up-State sections were of inferior quality and condition, with demand light and market generally dull. U. S. Bureau of Agricultural Economics reports that 48,596 crates of celery were still in storage December 22 in Wayne County. Two-thirds crates, best, sold at New York, January 4, at \$3.25, with few sales higher.

Butter Lowers on Heavy Receipts

Butter dropped several cents a pound in the last week. Receipts are running several thousand packages per day higher than the week previous, with considerable quantities arriving from foreign countries. Creamery, salted, extra 92 score, was quoted at 51½ @ 52c per pound, January 4, as compared with 54 cents a week before. On same date last year the price was 39 to 40 cents. State dairy declined from 3 to 6 cents on top prices for given grade, and showed much wider range in quality and price. Danish creamery sold at 52 to 52½ cents per pound.

Receipts of butter at New York in 1922 broke all previous records. There was an increase over 1921 of 444,704 packages, equivalent to about 26,682,240 pounds. The total receipts for 1922 were 3,317,278 packages. Although prices during the year were somewhat

were 19,025 tubs, compared with 9,164 tubs last year.

New York State cheese, whole milk, average run colored and uncolored flats, sold the first four days in January at 27½ to 28 cents per pound, slightly above the average price of December, on which the Dairymen's League based its price for milk going into cheese manufacture. The market was steady in spite of very heavy receipts of 320,006 pounds on January 2, compared with 102,539 pounds on same day last year.

Eggs Hold Fairly Firm

Nearby eggs declined another 5 cents per dozen last week, except fancy nearby browns, which continued at about the same price. Receipts were about 4,000 cases in excess of the previous week from Saturday to Tuesday, January 2. Shipments of Pacific Coast whites were fairly liberal. The fanciest nearby extras were in fair demand, and the finest New Jersey lots sold for various prices up to 60 cents per dozen on January 3. Pacific Coast whites extras quoted at 55½ @ 56c; fancy New Jersey hennery browns, 56 @ 57c.

Receipts of Poultry Exceed Demand

Receipts of fresh-killed poultry contained liberal and in excess of demand. Nearby chickens are very irregular in quality and many shipments average considerably under the quotations. The prices on nearby best poultry, January 4, follow: Per pound, by the barrel, dry-picked fowls, five pounds and over, 29 @ 30c; four pounds, 28c; three pounds and under, 20 @ 26c; scalded, five pounds and over, 23 @ 24c; roast-pick chickens, dry picked, four to six pounds and over, 34 @ 36c; 3½ pounds and under, 24 @ 30c.

More live poultry was sold in New York City in 1922 than ever before. The total business for the year was more than 12,000 carloads, with an

New York Holstein Breeders' Annual Meeting

THE annual meeting of the New York Holstein-Friesian Association will be held at the Hotel Yates, in Syracuse, January 16. It will be followed by a banquet that evening at the Hotel Onondaga. Speakers include D. D. Aitken, Flint, Mich.; Lieutenant Governor-elect George R. Lunn, Henry Morganthau, Jr., publisher of the American Agriculturist, and J. D. Barnum, publisher of the Syracuse Post-Standard. Prof. H. H. Wing of Ithaca is chairman of the banquet committee.

Annual Winter Sale Next Week

The annual mid-winter sale of the Association will be held at the State Fair grounds on the two following days, January 17-18. Over 150 head of high-class pure-bred Holsteins will be sold, including several 30-pound cows and fourteen bulls from high-record dams.

TAGGART IN FRONT AGAIN

The winner of the Grand Championship at the International Live Stock Exposition this year was C. L. Taggart of Washington, Pa. This is Mr. Taggart's third grand champion. In 1907 he won with Squire Good, and in 1910 with Crown. The Aberdeen Angus Breeders' Association writes as follows of Mr. Taggart's achievement:

"This practical breeder from the East has always been high up in these competitions in which animals are lined up in the ring and judged alive by one judge, are then slaughtered and their beef passed upon by a second expert as they hang in the coolers of one of the big packing houses. Every year Mr. Taggart's Aberdeen Angus steers are crowding the colleges for honors, getting two firsts, three seconds, three thirds, four fourths and a fifth in classes that often number over 50 in the greatest agricultural colleges in the United States.

Starting with a good Aberdeen Angus cow picked up at the Chicago yards several years ago, Mr. Taggart began using registered purebred Aberdeen Angus bulls. From that start came all these excellent carcasses and have proved above every other feature of the show that purebreds are worth about 40 per cent more than scrubs or grades merely as a commercial proposition at the market.

To Keep the Horses in Condition try feeding carrots a couple of times a week. They act like a tonic. They also keep the coat sleek and glossy.

Choosing the Farm Radio

(Continued from page 33)

stage amplifier, a single circuit or two-circuit regenerative receiver should total about \$75 if home-made, and about \$160 if it is a manufactured instrument.

For those who are not mechanically inclined and who wish to insure results, it is advisable to purchase a manufactured outfit. Where economy is important, and the radio enthusiast is also capable with tools and of an experimental nature, the individual parts for the set may be purchased and assembled at home. This is by far a better method in these days of mail-order houses and quantity production of radio supplies than the third possibility—that of constructing the entire set oneself. Where sufficient money is invested in standard parts, it is always possible to advance from a simple to a more sensitive outfit, but home-made parts are almost always thrown away and replaced later on by superior manufactured products.

Realizing that radio broadcasting is a settled affair, and that it will be a most important factor in farm life, the American Agriculturist will publish within the next few months a series of "how-to-make-it" articles describing the construction of a number of modern radio receiving sets which have proven their worth. These will all be progressive in that the parts employed for a simple receiver may be used later on in a more advanced outfit, when the builder has fitted himself to assemble more sensitive equipment.

"THE MACHINE YOU WILL EVENTUALLY CARRY"

The Underwood Standard Portable — a necessity on the modern farm

FARMING is now a business; and farmers are business men. Surely their letters ought to be business-like letters—in other words *Typewritten* letters.

The boys and girls on the farm—and the older folks too—will enjoy writing on the sturdy, simple Underwood Portable. No lessons are necessary.

Think of the business benefits of *typed* letters. Your meaning cannot be misunderstood, or your orders mis-read. You may keep a carbon copy of your correspondence.

As for the children—an Underwood Portable is of real help in school work. Lessons, when typed, are neater, more legible, and sure to get the favorable attention of the teacher.

"If He's Five, I'm Fifteen"

Over One Hundred Twenty Thousand Circulation Weekly

At the Crossways of the World

Broadcasting Thrift and Health

By JOHN W. HARRINGTON

WHERE all the world may meet is the busiest crossing on this continent. It is the heart of a great city, this junction of the streams of traffic, where a tower flashes colored fires and streams of vehicles pause or move at the note of the police-whistle. The patient and impatient, the idle and the busy, all halt at the curb at signal, eager to be on their way again; for if they did not hurry to make room for more there would be no space for anyone to pass at Fifth Avenue and Forty-second Street. It must have been that two men, who stood silent in the crowd, saw a vision, for they did not move nor stir for a moment, although the signal to let go the sluice-gates of travel had been sounded.

A Crowded City's Most Crowded Crossing

"You are right, Kent," said the older of the two. "It is ours. Of course, I know, as well as everybody else does, that all that action, all that advertising, had to come from a definite place, and now I recognize it by the pictures."

Two Bankers View Their Building

"I had almost forgotten that our Insurance Company had moved," rejoined Wilson, of Wyoming. "That was five years ago. What a wonderful site for such a Company! It could not have just happened; it must have been by design. Why, man, here is a regular broadcasting station, sending wave after wave of 'Safety and Service' to all America! A matchless advertisement, itself generating advertisement, reaching a whole people."

"It does that," commented Kent. "In this wireless age, what less could be expected, and what is better than agentless policies available to everyone?"

That was how the memorable visit of Kent of Keokuk, and Wilson of Wyoming, who had gone to New York as delegates to the Bankers' Convention, brought them right to the very doors of the Company into whose keeping they had given the protection of their families—the Postal Life Insurance Company.

"What better location for advertising and selling insurance than right here?" proudly remarked Wilson. "Here is all mankind in endless procession, reminding one that there is no time like the present. With banks and trust companies and two great railroad stations as neighbors, our Company has placed itself at a center where it can easily reach out in every direction

with its messages. All roads lead to it, for the mail pouch is a universe in itself."

They had entered the building. "I think, now that we are here," said Wilson, "it would be a fine thing just to take a look around. We may find some one who can spare us a little time and show us through headquarters. What do you say?"

Whatever Mr. Jason Kent may have had in his mind to say, it vanished; for at that moment an attendant had asked: "Do you wish to see the President?" "If he is not too busy," answered Wilson, "although I am sure he would hardly know us, considering that we came in by the mail route."

A Place Where the Public Feels at Home

"Most of us do," rejoined a smiling person who had stopped for a moment to glean some of the new literature from the ever-ready rack. "There are a good many residents of New York who come to get their policies over the counter; but, all the same, we are all converts of printer's ink—not captives of the zealous agent."

Did you ever see, in one and the same enclosure, the office of the President and the conference room of the Board of Directors? That's an innovation. And it shows just how closely everybody co-operates in the management of the Postal Life Insurance Company. If the walls had tongues with which to speak, they would not have needed them, for everywhere were the eloquent signs of the ideal for which the Postal stands. A portrait of Lincoln and another of Roosevelt revealed the sound Americanism that is the basis of all public service. On the panel near a Fifth Avenue window was an "Address to the Flag," and from another angle could be seen the benign and dignified face of John Marshall, once Chief Justice of the United States, the very epitome of the law that guides every operation of the busy organization conserving the welfare and the future of so many thousands of Americans.

The President, who had just concluded a conference, came forward to greet the visitors.

"You don't see many of us at our face value," laughed Kent, "so we thought, if it did not take too much time, that we would just drop in and view the original home of our policies."

"It is a great pleasure, indeed," returned the President, "to have the opportunity of seeing our policyholders face to face. And it is surprising, considering the fact that our business is conducted through correspondence and advertising in its various forms, how many of our policyholders do us the honor of visiting us."

"Now that we are here," suggested Wilson, "we might state that it is often wondered at that you are able to reach so many people in the United States without personal solicitors."

"There's no mystery about it," was the reply. "Every man wishes to assure the future of his family. He also dreads to be the quarry of canvassers and agents. If the argument for taking out a policy can be presented to him when he is in the mood to receive it—say through the pages of his favorite magazine or newspaper—and the terms are within his means, there is no real difficulty to overcome. It is a matter of plain, every-day common sense. There is nothing more expensive than forcing the average American to take even what he thinks he ought to have

at a time when he does not feel inclined to take it."

"You issue a great deal of direct advertising literature," remarked Wilson. "We send that when the interest of the inquirer has been aroused. Having once written the Company, he always has some kind of an interest; and we keep on sending suitable literature, if we feel that something has interfered with his giving the matter the needed attention. When his application has been received, the balance of our task is routine. Like you, he has become one of us by that time. The details welcoming him into the Postal family soon follow, as you will soon see by making an inspection of what we call the

Policyholders' Home Office

Home Office. In a true sense, it is the home of the policyholders, whether they are present with us, as you are, or are here by proxy in the files."

Through well-lighted, thoroughly ventilated rooms, the visitors made their way, as they followed the orderly course toward the division of policy-issues. Correspondence experts with their assistants ranged in long lines were seen answering the inquiries of men and women from all parts of the country asking for particular information after they had read an advertising announcement. Many had sent the amount of their first premiums. The reports of examining physicians were in hand. The applications pass to the Medical Department, where they are carefully scrutinized. Here is a department which irradiates health, for it sends out periodical bulletins of practical advice to policyholders, for their guidance in keeping "fit."

And the visitors availed themselves of an annual privilege of every policyholder—that of being "examined" by the Company. They passed the medical muster with colors flying, as they were bound to do; for had they not had the advantage of sound counsel for years, as to the guarding of their health?

One of the features of Postal Life management is the despatch with which an inquiry about a policy is answered. The promptness with which all claims are met is known in every part of the country.

"It only takes a look through your filing and distributing departments," commented Wilson, "to be impressed with the importance with which the facilities for transacting business quickly are regarded. I have never seen such efficient handling of business anywhere."

Sometimes with watch in hand he was making himself sure that there was no lost motion in the progress or movement of the work. The experiments were most convincing. The methods by which a well-gear machine functions are interesting to everybody, but especially so when the beholder is personally interested in the net result.

Conservation is the keynote of the administration of the Postal Life. It says it "enforces economics." It is evident that, in every detail of the management, it remembers that the money in its keeping is in trust for the benefit of all who are on the books.

As at any time the examiners of the State Insurance Department are likely to make a visit, there is the extra incentive to keep the business of the Company in order, up to date, and showing evidences of Postal economy.

The experience of the two policyholders from the West on that autumn day not long ago confirms the impression so many have gained: that the Postal Life Insurance Company is an institution looming large in the life of the Nation.

David Lubin, Prophet of Agriculture

A Picturesque Leader in the Struggle for a Fair Deal for the Farmer

WILL you make history with me?"

It was a challenge which came without introductory formalities to a young Italian patriot at Pisa, some years ago. The speaker was a middle-aged man, with deep-set, kindly eyes in a worn but finely-modeled face. The young Italian listened, fascinated as the speaker went on, and later wrote of that memorable talk:

"He started from way back, and in a rambling talk, relieved by singular and picturesque expression, traced down the ages, the everlasting struggle between town and country, between the industrial and the rural population, showing how the latter, though more numerous, more virile, and the economic and military backbone of the State, has nevertheless been the 'under dog' in the struggle, politically outwitted and economically exploited more or less everywhere.

"The ideas were not new to me, but he spoke with such warmth of conviction, his eyes shot such fiery glances, that all diffidence which the eccentricity of the person or of the approach might have inspired melted away. Indeed, I felt strongly attracted to this man, obviously moved by a deep sense of injustice to be righted, of good to be accomplished. And he won my assent more and more when, analyzing the phenomena, he assigned the cause of the inferiority to the defective organization of the agricultural classes. He was speaking to a convert."

He Took Up the Farmers' Fight

The man whose devotion to this struggle of the farmer had led him to turn his back on a comfortable middle-age in America and to become practically an exile, in failing health, derided as a crank, but gradually winning European acceptance for his cherished plan of world-wide reform, was David Lubin. The challenge to help make history which so thrilled the eager young Italian, came from the lips of this unusually modest and self-effacing man in the first flush of victory after he had finally obtained an audience with Victor Emanuel, King of Italy. The King, himself fired by the enthusiasm which animated this prophet of a new order, had promised to take the initiative in founding a world Chamber of Agriculture.

The dramatic story of Lubin's long struggle to bring his plan before the ruler of some great power, is told in his recently published biography* written by Olivia Rossetti Agresti, who joined the ranks of his converts as secretary during the Italian campaign and who went with him through the exciting days of alternating success and reverse which made up the rest of his life.

What had proceeded that climax to Lubin's career is told by Signora Agresti with the sympathy that makes her account seem to

be from first-hand knowledge. The man who was to be one day regarded as one of the really great Americans—as indeed, a figure of international importance—was born of humble parents in a little town in Russian Poland. Named after the mighty King David, the boy was further believed to be set apart for service because of an incident which happened when he was only four days old. The wick of a Sabbath candle fell on the cheek of the baby, lying by his mother's side, and made a deep burn which left a scar for life. A learned Rabbi, visiting the home, interpreted this as a sign that the boy was set apart for God's service and his mother's firm belief in this omen, according to her son, influenced his whole subsequent life.

One Who Did Much

FEW who read this ever heard of David Lubin, yet farm people owe him much. The crying need of country folk the world over is for unselfish leaders and David Lubin qualified. Miss Elliot's article on this page will tell you how.

As a poor emigrant boy on the East side of New York, young David soon ceased his schooling and at twelve was at work. The cry of "Go West, young man!" came after a while to his ears, and three years in the wilds of Arizona made him strong in body, developed his keen resourcefulness and taught him the lore of the pioneer and the philosophy of the dweller in the desert. It was a many-sided, matured young man who at twenty, drifted to the coast of California and there entered commercial life. Entered it, be it said, with a spirit of fairness and justice which was a new note in the trading and barter of that crude, adventurous country, where men made or lost a fortune over night and where money and lives alike were held cheap. Young Lubin, firm in the teachings of a Godly mother and his own deep-rooted instinct for absolute justice in even the smallest transactions, announced his modest start as proprietor of a struggling little shop by hanging out the first "One Price Only" sign seen in the West. Small as the shop was, and meager the living won from it, Lubin by that step doomed the old sharpster method of haggling over prices. His fame as an honest merchant gradually spread, he carried his principles of equity to customers and employees alike into his larger ventures, and in time he inaugurated the mail-order business as we know it to-day, and was well on his way to becoming an extremely wealthy citizen.

But all this business career took into no account the continual urge towards service, the inner conviction that he was a man set apart to give his life for others. Lubin all his life long was student, a thinker; the rapid growth of the West had caused much injustice and his keen, analytical mind was constantly revolving the problems of his sur-

roundings. After a great deal of such thinking, he felt that he had reached the fundamental fact in deciding that the condition of the farmers determined a country's real prosperity.

Never a man to argue a subject with which he was not thoroughly familiar, he turned his back on commercial success, bought a farm and started out to learn the business, literally "from the ground up." How he fought for equitable railroad rates—even making a flying trip to New York and bearding the most stubborn president in his den—how he organized the fruit growers, educated public opinion, stormed the citadels of Washington and used the county-house, the store, the rural paper, the farm gate or the grange as his pulpit, makes a story of tremendous effort and a large proportion of success.

Final Success and Accomplishments

A trip abroad widened Lubin's own horizon; he began to see how the fortunes of farmers the world over were inextricably linked and gradually there took shape in his mind the idea of a sort of international court of justice for

the farmer and more a clearing house which would give him the benefit of modern business methods both in production and marketing.

The story of Lubin's fight in America, of the opposition from enemy interests and his own government, is one of discouragement and defeat. The story of his fight abroad, culminating in his successful interview with the King of Italy, is one of amazing patience and undaunted faith which finally won out triumphantly. The International Institute of Agriculture was founded—through what vicissitudes it requires a volume to tell—and Lubin saw it, hampered though it was by jealousies, bureaucratic systems and natural human deficiencies, actually functioning. The eloquence and tireless patience which finally achieved this end focussed on the Institute the attention of all Europe and made the name of Lubin famous alike in Italy, France, Austria, Germany and Russia.

International crop reporting, cooperative systems of rural credit, the stabilizing of ocean freights and new systems for direct marketing, are all concrete outgrowths of Lubin's lofty ideal to secure justice between men in their economic relations. In many other directions his influence was and still is felt to a remarkable degree. Yet so self-effacing was the man in his lifetime—he bitterly disliked publicity, in spite of his belief in aggressive campaigning for an idea—that even when he was alive he rarely got full credit for his achievements, while after his death his name seemed destined to be forgotten almost over night. From this final ingratitude of a country which, even in his hour of success, never gave him more than a grudging recognition, his devoted biographer has saved him.

Stand by the League

FOR a thousand years before the foundation of America the principle of democratic institutions where all men have equal rights was more or less of a theory. The founding of America was a great experiment to see whether that theory had any practical application. The American Civil War put the principle of political freedom to the final test of blood and firmly established it upon a basis which will endure to the end of time. As we remember that terrific struggle taking place between Americans, most of them farmers, and the terrible feelings of uncertainty and suffering which they were enduring, we can have some understanding of the feeling that inspired those immortal words which Lincoln delivered at Gettysburg. When he said:

"Fourscore and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure."

As people struggled for a thousand years to gain political liberty, so they are struggling now for economic freedom and in this struggle there is no one so much interested in the final results as the farmer. For years he has been working on the principle that the way to earn economic freedom is by cooperation. That theory is now being put to test. In the next few months, farmers will determine whether cooperation is merely a much talked-of theory or whether it has actual practical application. As Lincoln's words applied to the political struggle, they apply equally well to the present one. We are engaged in a great economic struggle to see whether the principle of cooperation dedicated to the proposition that those who work are entitled to just share of what they

earn, testing whether that principle can long endure.

Particularly from now until the end of the February cancellation period will the members of the Dairymen's League Cooperative Association be put to a test to determine the stuff they are really made of. If they secede from the League as the Southerners seceded from the Union, confidence will be destroyed not only among dairymen, but in all other lines of cooperation and the business of farm marketing will be set back many years.

Without doubt there are farmers in the League territory who would make better leaders than some of those now in charge of League affairs. Without doubt the League has made many mistakes. On the other hand, it has been doing a pioneer work and mistakes were unavoidable and the fact remains that it has achieved results. It is a crude machine, to be sure, but it is an improvement over old-fashioned methods and it cannot be made better by smashing it. As for its officers, time and opportunity for making needed changes will come in due course.

But the immediate job is to save your business by standing by it and by working out your problems in your organization from within. The membership of the League have a great responsibility and they will be equal to it.

Committee of 21 Receives Support

REPRESENTATIVES of the Committee of 21 are finishing a long list of meetings which has been held in practically every rural county in New York State to discuss the suggestions which the Committee has made for the improvement of rural schools. This series of meetings makes the second time that the Committee has been over the State to get in touch with the rural people on the school question. The first time mass meetings were held in many different counties to get opinions and suggestions from the people on which many of the Committee's recommendations for school improvement are based.

Of course, not all approve the suggestions for school improvement which the Committee of 21 is making, but rural people are pretty nearly unanimous that there has been a sincere effort made to work out a school program which will lead to better educational opportunities for country boys and girls, and judging by the sentiment of those who attended recent meetings, there seems to be at least a majority of farm men and women who are in agreement with the fundamental recommendations of the Committee's report.

Prices Determine Production

AN Ex-Secretary of Agriculture recently made the statement that during the war the farmers of America increased the number of acres under cultivation by forty million; increased the number of head of live stock by eighteen million and at the same time sent one million of their boys to war. In the same statement he said that all that is needed to increase production is an increased price for farm products.

We have before us a letter from a subscriber on this same subject who says: "Have we forgotten that when millions of our men were removed and more food was needed with which to feed the world it was promptly forthcoming? Are we unaware that when the price of any given commodity approaches the cost of production the farmers promptly bring it down by flooding the market with that particular article? If farm products sold even fairly profitably the labor now available would swamp every city in the land with a bewildering surplus and every intelligent American knows cheap labor means agricultural ruin."

The history of agriculture is completely filled with examples of increased production following increased prices. No longer ago than November, 1922, there was a serious shortage of milk. One not acquainted with the dairy business would think that the only way to increase the milk supply is to increase the number of cows. But the facts are, at the present time, only two months after the shortage there is an oversupply of milk. Why? Because the price during November, December and January was comparatively good. The farmers took better care of their cows and fed more grain, thus increasing the supply for each animal, making a large increase in total with the natural result that the price will have to come down again. If those who are constantly wondering about lack of production on the farm, about the boys leaving the farms for the city and of the need of bringing in more farm labor from Europe, would give a little more study to economic facts, we would have less foolish talk about the danger of over production.

Must Be Measured by Service

THE final test of whether the future market business of farming is to be run by the usual business agencies or by Cooperative Organizations depends entirely upon which can render the more service. We believe there is a place for both. Take the Grange League Federation Exchange, commonly known as the "G. L. F.," for example. This cooperative organization which has for its purpose the cooperative purchase of farm supplies is of tremendous value to every farmer. Its business is increasing in volume; it handles only the highest quality product and it is teaching farmers the value of quality, but its greatest use to its farmers is its indirect influence on the supplies the farmer buys, whether he buys them from the G. L. F. or from some other source.

In a conversation with a retail feed dealer recently, he told us that farmers had little appreciation of the great effect that the G. L. F. business was having upon the whole farm supply market in keeping the cost of feed and other supplies within reasonable limits and in making it necessary for every dealer to improve the quality of his product in order to meet the G. L. F. competition.

We hope that farmers will appreciate this indirect service and see to it that the cooperative organization gets enough volume of business to maintain a strong organization without a too high overhead expense on the supplies handled. At the same time we know that there is appreciation on the part of farmers for the good service that has been rendered by many feed and other local dealers and we do not think it to the interest of agriculture to have all of these dealers eliminated. We do not think the management of the G. L. F. would, if they had the opportunity, eliminate them. In fact there are many dealers already working with the G. L. F. The dealer who is content with a reasonable profit, who is on the job to serve his farmer customers all of the time and who takes a constructive instead of a destructive attitude toward cooperative competition will have a welcome and a safe place in the farm supply service.

Quotations Worth While

Avoid debt as you would the devil.—HENRY WARD BEECHER.

He who reforms himself has done more toward reforming the public than a crowd of noisy, impotent patriots.

Who Should Carry the Family Purse?

Some Say Ma, Some Say Pa, But Most Say Both

THE answer from American Agriculturist readers has been very nearly unanimous. With a few scattered votes for "Pa" and, yes, about an equal number for a purse in the hands of "Ma," the general opinion has been—make it a joint affair.

Some say, have it a sort of double-barrelled affair which opens with equal readiness to the hand of either husband or wife. Some say there should be no pocketbook, but that the bank should receive all the money that comes in and, save for a little emergency change, yield it up only to pay bills by check.

But whatever the method used the idea is the same. "Marriage is a partnership"—that sentence occurred so regularly that we came to expect it by the end of the first paragraph of each letter. And what is more, the letters went on to prove, by the personal experience and money habits of the families they represented, that the typical American farm home is indeed a true partnership, with the mother and father working together for the common welfare of all those under the home roof.

But let them tell their own stories. First we'll hear from two families, each of which represents a successful partnership of twenty years duration. In one case it is the father and in the other the mother who writes:

"I read with interest the discussion on Who Should Carry the Family Purse. When wife and I were united in marriage, (it will be 20 years ago this 24 day of December) we became as one and have clung to that idea ever since, although there are seven of us now. We have but one purse—cream money, hog money, corn money, poultry money, and all that is produced from the farm goes in the same purse, and all the family draws therefrom. As I see it, this is as it should be, for the entire family is as one company, each one helping where he can in the house, or out in the fields, girls and boys alike, father and mother the same. We try to teach our children that the home belongs to them the same as us; that wife and I are only president and vice president, and they are stock holders and all have one common interest."—W. S. B., Ohio.

"The question of who should carry the pocketbook seems to some a great problem. Father and I have been married 20 years. We have always used the same pocketbook, also had the same privilege of signing checks. The money we both receive from the sale of farm products, stock and so forth all goes in one fund to make up our income. Whenever we wish to purchase anything, we discuss this together. I would no more think of buying new curtains than father would buy a horse until we have talked it over together. We keep a little money on hand for our personal use. This is also for the son in High School and the son and daughter in the grade school.

We have always discussed our financial problems before the children in order to teach them the value of money. After all, when a home is founded on love, money matters can easily be settled between husband and wife."—MRS. E. W., Ohio.

Hearing from the Younger Ones

JUST to show that the younger generation is not behind its elders in common sense and the ability to work hard and pull together, we'll now introduce two young married couples. In both, it is the wife who finds the time to write:

"I saw your question, Who Carries the Pocketbook?" in the December 16 issue, and thought perhaps you could use our little plan, which is working splendidly. We have been married a little more than two years, and find we must figure quite often to make

our ends meet, and this is how we carry our pocketbook. All the money which comes in is placed in a box which we keep in a place we are both familiar with, and we both take out what money we feel necessary to spend; but first we consult one another as to what we are going to buy and then buy according to our decision. Then we have what we call a "housebook" and what is spent for the house and for pleasure and general use is put down every day in this book. We also have a book called the 'barn and outside ex-

Marriage is a Partnership

We introduce you to Mr. and Mrs. J. S. Clarke of Forestside Farm, Steuben County, New York. They were married 61 years ago last April and have lived for the most of that time upon Forestside Farm where Mr. Clarke was born. Not much danger of any serious argument in a real partnership of this kind about "Who Shall Carry the Purse" or about any mutual problem.

pense book,' where we keep account of all things bought and sold from outside.

Now in this way we are able to tell just how much we are spending a year and just how much is necessary to have on hand in case we would run short. I think it a splendid plan. Then at the end of each year we take inventory and see what outstanding bills and so forth are waiting, and are able to know whether we are going ahead or behind in any way.

We hope some one else would like to adopt our plan and run it as satisfactorily as we are doing, for we want to be honest with each other, and in this way we feel we are."—MRS. P. H., N. Y.

"Yes, indeed this is an important problem for every family. This is the way we look at it. We rent a flat in a small village. My husband works about thirty miles from here and commutes every day. We are saving money to buy a home, (we want a small farm, about thirty acres of good land), so we both want to put in the bank every cent that we can spare. Every week, my husband writes out a check for my allowance, which we decided would be three dollars and a half a week for the provisions and my spending money. Sometimes I pay the electric light bill, which is a dollar or more a month. Of course that means careful planning to keep the house well stocked with groceries and necessities. This summer I bought fruit and sugar to can it. Last week we bought half a hog. My husband paid for it and I

plan to pay him back out of my allowance this winter, as I will not have to buy pork, sausage, ham and lard. We expect to buy a quarter of beef also, and can it. My husband pays the rent and buys the wood and coal. Every two weeks when his check comes we send it right to the bank, then he checks out just what we really need. We find this a very satisfactory way. I am very strong for the allowance system for each member of the family, and then keep within that allowance, even though it be small."—MRS. M. P., N. Y.

Sometimes a Second Start is Needed

A WOMAN who has learned by experience the bitter results of an unfair system of handling money, tell frankly of her past unhappiness and present content in the hope of helping others just starting out:

"As a rule a woman nine out of ten has the business in her and sees through things better than a man, as men as soon as they get a good start have a big eye and want everything they see. When we first got married we got 54 dollars a month—I was for saving, and saved a hundred dollars in fifteen months. We had a daughter and I thought we could be cared for nicely. One day I told my husband where the money was and when I got around there was only \$20 left. I never said anything, but I could see he could not run his income. Like some women, he did not care to work as long as the money lasted. He then handled his own pocketbook. He got very selfish and I couldn't get a dollar from him without his getting mad, and yet he expected three meals a day.

Then I got mad and left him for a week. He asked his neighbors to phone me, and they told him to fetch his wife himself, which he did, and we talked it over and agreed to discuss it together when we wanted anything. We both handled the pocketbook and saved \$1,000 in four years. We bought this farm of 70 acres, and now are happy with three little daughters, three horses, four cows, four pigs, 60 chickens, and are contented to stay at home with the American Agriculturist."—MRS. R. B. N. Y.

We must find room for two more letters, one a very jolly one, which shows that a sense of humor comes in handy in even the most serious matters; the other from a young woman who started learning thrift habits at the mature age of four:

"Who should hold the pocketbook?" That is easy to answer. You should all have a joint account, just as we do. I told that to a friend once and he said his wife would bankrupt him in less than a year if he gave her a checkbook, and told her to go to it. He reminded me of a woman who was so surprised when the bank said she was overdrawn because as she said, "I haven't used half the checks yet." I can't tell what my friend's wife would do of course, but I can say that I haven't been bankrupt yet because of the joint account. In fact I am both glad and sorry to say. I believe my wife is a more economical spender than I am.

If you are as nervous as my friend was about trusting your helpmate with a checkbook, it seems to me that there are several remedies that may help you. First, don't marry the girl you can't trust with money. I presume that advice is too late for a large number of my readers, and it is somewhat difficult to follow at best, because there isn't enough of the right kind to go around for everybody and even the wisest men have been known to make mistakes and the little lady who is so saving before she lands you, may be acting for your especial benefit.

A Plow Handle Talk on Selling Milk

WE have been able to buy old process oil meal this winter at \$50 a ton and we are feeding a little to all of our stock. I can't account for the splendid effect of a pound of oil meal a day. Even less than that seems to lubricate the whole system. Our milk is used almost entirely for babies. It keeps one thinking and sometimes guessing how to be absolutely sure every day in the

H. E. COOK

year that no mistakes creep into the milk. If they do, mother will soon stop buying, the trade is gone, and the business is on the scrap heap.

I feel pretty safe in saying that farmers do not as a whole take seriously enough their responsibility in making their products the best

they know how. I know the impetus to "do" is retarded by a lack of careful grading. We see milk and veals and vegetables of second quality bought at a common price with better grades, on the general plan that, all together the mixture will pass. It was this faulty plan of grading that started our farms producing a grade of milk that could not be mixed with other grades. It must be manufactured and sold absolutely on its own merits. If we let down the bars of quality we cannot charge the fault to a neighbor. We have to stand it ourselves. Occasionally there is a tendency to shift the responsibility from one person to another but that is so rare as to become negligible; all hands immediately go to it and locate the cause.

Service Helps Maintain Demand

Another thing we find most helpful in giving permanence to our demand, and the best has no value until marketed, is to study in season and out, how much we can do to facilitate the dealers or distributors problems. Of course, there is a limit to what one can do along helpful lines and have money enough left to pay bills, but not many of us have reached that limit. I think business houses call it service,—that's a good word or phrase to use. I know how it ruffles the feathers to have an unscrupulous person take advantage of a kindly disposition when one makes it easy for him. But that class of people are in a hopeless minority after all.

If our business gets thoroughly saturated with real service so that it comes to every worker unconsciously on the spur of the moment and without special thought, enough appreciative customers will soon appear to take the output. Then we can drop off the one that does not fit into the general harmony of the service plan. Customers who uniformly have the best that can be given are wonderfully charitable when an occasional slip occurs, but we must always allow them to be the judges of when the case warrants their charity. Whatever we do in our business to go to extremes in giving service does not altogether come from high ideals or an unselfish devotion. It is good business and is worth while in dollars and cents, and also gives permanency. The time one gives to worrying over the loss of trade cannot go into the productive effort.

Pays to Advertise the Service

Well, what has all of this philosophizing to do with feeding oil meal. It has a lot to do. In our case the general health and appearance of the stock is an asset comparable to getting our milk to the distributor or consumer in good form and on time. We have not learned how to prevent cow troubles, like udder and uterine diseases, I am sorry to say. But we can immediately isolate the animal until she is again in proper shape physically to produce milk that I would use myself or give to a child,—not a bad test by any means.

The New York Milk Commission rules say that a fresh cow must at least give milk for 10 days before her milk can be put into certified bottles. I do

not know any way to have every cow physically fit at that time, but we can easily keep her out until she is fit. In our local markets where we come close to consumers we do some advertising. We find that a small double folder printed on a thin card, envelope size, stating in brief paragraphs how the milk is produced and what it will do, is the best kind of advertising. Busy people can read it easily and quickly and these folders can be placed in the hands of mothers and invalids. Advertising is necessary in this day. If one has something to sell, somehow, some way and somewhere, a buyer must be found.

Shrewd advertising often finds or creates a buying clientele which is legitimate and worthy, when the product sold is a needed one, and—surely farm products when of good quality are needed. The work of the Dairymen's League in advertising milk and milk products has been of value beyond its cost. When we are complaining that the returns should have been more, let us not forget that the investment in advertising has been a good one.

Advertising is expensive, as I know from experience. One must be pretty sure that the methods employed are proven ones or if not, that experiments be conducted in harmony with the funds at hand. The fact that milk profits are small, if any at all, leaves small margins to be spent for advertising purposes. If we had a method whereby we could change milk values as easily as corn and wheat prices are changed when they pass through a breakfast food factory, we could carry a full page advertisement in every paper in the land. Maybe in some future day such a thing will happen.

Dr. D. B. Armstrong of Watertown, N. Y. a director of the American Holstein informs me that the association has voted an initial amount of \$65,000 for advertising Holstein milk and more will be coming later, a most commendable enterprise.—H. E. Cook.

SPREADING MANURE PROPERLY

PETER WILEY, NEW YORK

Very few people understand the proper way in which to spread manure. The majority of men take a load of manure to the field and literally throw the manure off in chunks, caring very little about the way in which it landed, only so it reached the ground. This practice is very wasteful, causing fermentation and a great loss in fertilizing constituents. When this practice is followed, vegetation grows very unevenly. Some places in the soil the crop grows sparingly, and in other places so rank that the grain will lodge and thereby be wasted.

An effort should be made by the man in charge to have the manure taken direct from the stable to the field, no matter whether in winter or summer, and see that the manure is evenly spread over the soil. In our practice the manure is taken direct to the field and spread evenly over the ground. Even though it might be a sloping field, the practice is followed. We find that very little of the ingredients are washed away down the slope. Occasionally we find those who believe this to be the case, but from experience covering many years we believe the greater part of the fertilizing value goes directly into the soil. Through the summer we bought a spreader for this work, but during the winter we spread by hand. It gives better satisfaction, as the freezing of the manure interferes with the working of the machinery.

Test Seed Corn—All seed corn should be tested for a spring planting. March is a good time in which to make the test. The most satisfactory way is to test four to six kernels from each ear. The requirements for germination are moisture, warmth and air. The ordinary temperature of the living room is about right if it does not go below 50 at night. A shallow box filled with wet sand and marked off into numbered squares with twine makes a good germinator.

The Pace Is Getting Faster

Good Seed Gets More Potatoes With Less Cost

"POP" SCALES used to like a fast horse. Indeed when anybody around Malone got a faster horse than his, Pop had a horse for sale. Once he sold a little brown mare that had lost his favor in this way and he told her new owner

ists from the College of Agriculture at Cornell visit seed growers crops three times during the season and in which the growers organization certifies to the buyer that the seed stock he buys is actually from one of these crops

Potato Growers Studying their Business

During the past season the Farm Bureaus in over half of the New York Counties organized inspection tours or field meetings to enable potato growers to get together and study the new problems confronting them in the cultivation of this crop. The group snapped above are seen inspecting a Suffolk County Farm Bureau Demonstration

that she could "go" in about 2.10. The new owner trained her faithfully for a month but brought her back and said she couldn't do the mile in less than 2.40. Pop said, "Well, what of it? You must be in quite a hurry if you can't wait half a minute."

We suppose when the world's record was held by Maud S, a trotter that

The Best by Test

The three baskets on the right contain the product of one square rod planted with certified seed. The picking basket on the left holds all the potatoes that grew on a square rod in the same test planted with diseased seed. Last year the Suffolk County Farm Bureau tested in this manner 54 strains of Green Mountains and found the New York certified seed to give the highest yields

could make the mile in 2.10 was just as valuable a racer as Peter Manning is to-day. But race horses go faster now than they did forty years ago. Similarly potato yields have increased rapidly in recent years. Here in New York for 50 years the average yield for an acre of potatoes was only 85 bushels. But in spite of a record breaking drouth in 1921 and a sea on of floods and blight this year, the average yield for each of the past four years in New York has exceeded 100 bushels per acre. We think this increase is largely due to the use of better seed.

The Evil of Trading Seed

Potato growers have always tried to get the best seed obtainable. Up to five or six years ago, a grower wanting new seed could either send to some commercial seed man for it or change seed with his neighbor. The first mentioned practice accounts for the rapidity with which all new potato diseases spread to every part of this country. The practice of changing seed between neighbors has proven an intensive means of spreading potato diseases locally.

But recently with a system of inspection and certification in which special-

which has been found to be suitable for seed, real improvement has taken place.

"The chair" recognizes the gentleman who now takes the floor to remark that we don't want any more potatoes. "We are already producing too many potatoes," he says. That seems to be true this year. But why not look at potato improvement as we do at trotting records and say like clipping ten seconds off the trotting record, we have clipped two acres off the land labor and fertilizer—the cost, in other words, needed to produce a thousand bushels of potatoes. Has the gentleman, who is touchy about this "two blades of grass" talk, any objection to getting the same quantity with from one-half to two-thirds the investment of capital and labor.

A Matter of Economical Production

But whether they wish to grow more or fewer potatoes next year, they will likely find it more economical using good seed and adjusting their acreage in accordance with what is sound farm management for them. What no potato grower can afford is to continue to plant poor or mediocre seed and then hope to compete successfully in a branch of farming, the efficiency of which has advanced 20 per cent in five years by the general adoption of improved methods and practices. We have clipped two acres off the land needed to make a thousand bushel crop. Let the man who is not in a hurry drive his slower horse and cultivate his lower yielding strain of potatoes. But just as fractional parts of a second decide the

"Before and After Using"

The Warren County, N. Y. growers who planted certified seed in 1922, found that it takes more than a favorable climate and soil to make a good crop. The average increase in yield of certified seed over home grown seed was 64½ bu. per acre

winner in a horse race, so do a few more bushels of potatoes to the acre in a season like the one just past determine whether the grower breaks even or goes in the hole.—J. M. HURLEY.

As necessary as stable manure

A good farmer would be astonished if you questioned his wisdom in using manure.

Manure is all right as far as it goes, but it fails to give the phosphoric acid your land needs, and does not usually give nitrogen or potash in the proportions required by crops whose needs for food differ.

Learn the truth about feeding your crops. Experiment stations have proven beyond question the common sense and profit in the use of commercial fertilizers. Properly used, they will profit you by increasing your yield per acre; improving the grade of your grain, hay and truck; maturing crops sooner; saving labor cost, and building up your soil.

For advice or help, write Farm Service Dept. F. S. Royster Guano Company, Baltimore, Md.

ROYSTER
Field Tested Fertilizers

IMPROVED AND PEDIGREED SEED

PEDIGREED OATS treated to prevent smut. Cornelian—Development—Single plant selection by Plant Breeding Department New York Agricultural College. A tree oat slightly gray in color, good stiff straw. In five years trial on Agricultural Experiment grounds at Ithaca, has yielded about five bushels more than nearest competitor. Of all varieties under test there in 1920, it was the thinnest hulled variety and had the largest percentage of meat.

Svalof Varieties, Stocks second crop from Sweden.

Victory is the leading white variety in New York State. In four year tests by Department of Plant Breeding shows this second to Cornelian. Good stiff straw. Should be sowed thin.

Crown newer sort than Victory, longer kernel. In Sweden outyields Victory on particularly good soil. Lodging resistance good. Should be sowed thin.

Golden Rain, yellow oat, remarkably stiff straw. In Sweden is unexacting as regards soil. Grain medium and heavy with thin hull.

Price on all above sorts \$1.50 per bushel.
PEDIGREED BARLEY, Cornell's two favorites, Featherston No. 7, a six row barley originated at Minnesota Agricultural Experiment Station. Medium, tall stiff-strawed sort, high yield heavy grain. Recommended for separate grain crop. Most consistent high yielder of all six row sorts at Cornell Agricultural Experiment Station. None of this variety available but what shows trace of two row.

Alpha two row, a hybrid. A tall stiff straw

All prices are freight paid, bags free. All orders to be accompanied by 25% cash or 3% may be deducted if making payment in full.

Investigation through Farm Bureaus or Agricultural Colleges invited.

New
Burbank
Tomato

LUTHER BURBANK'S wonderful genius has created a Tomato that from seeds planted in open ground will bear fruit earlier than plants set out at the same time.

A. I. Root, editor of Bee Culture, states that he planted Burbank Tomato Seed when his other Tomato plants were budding, yet his first ripe Tomatoes came from the Burbank. Mr. Burbank, himself, says, "A second crop of Tomatoes has been grown the same year from the seed of the first crop." This earliest Tomato in the World is blight-proof—fine flavor.

Seeds guaranteed genuine. We control the supply. Sold 100,000 packets last year. Pkt. 50 seeds 10c; 3 pkts. 25c; 7 pkts. 50c; 15 pkts. \$1.00. By mail with Catalog of Seed Novelties.

Over 1,000 acres in our own Seed Farms.

Picking the Best Varieties

What to Look for When Reading the Seed Catalog

THE seed catalogues have begun to arrive. A few weeks ago we suggested careful reading of catalogues as a help toward better seed buying. Too many gardeners assume that the catalogues are of no value and so do not send for them. It is worth while to look through from three to a dozen each season, even though one does all his buying through salesmen who call at the farm. The reader of catalogues is more ready to deal intelligently with the salesman than the non-reader. He

PAUL WORK

has learned something of the varieties that are offered. He is able to talk more intelligently on prices and values. This does not mean seeking cheap seed, but it does mean having some idea what well bred strains are worth. In this connection, one who plants to sell should ask for the market gardeners wholesale list. Some houses print a separate catalogue for commercial growers, some quote special prices and others offer a flat discount.

One who reads catalogues will speedily learn to judge the relative value of statements that appear. This judgment will be by no means final but it will help greatly in making selections. In the first place the extravagant claims of a decade ago are fast going out of style and we seldom see pictures showing a tomato field blood red with ripening fruit. Even yet such boasts as this, are to be found: "Most beautifully shaped tomato the world has ever seen," "Absolutely no waste"—"The best cantaloupe ever grown."

Seedsmen Following Better Practice

Seedsmen have learned however, that such statements are discounted the instant they are read and they are bending their efforts instead toward telling the actual characteristics of variety and strain. Such comparisons as the following tell us at least what the writer thinks: "Not quite so hard but fully as large as Express, which it resembles."

Statements as to origin of variety, strain, and seed are, when made by reputable houses, of great significance. The originator or introducer of a variety is likely to take more pride in it than the general run of seedsmen. Also whether or not a certain bean is "the very best, most tender and delicious" may be a matter of opinion. "Our selected strain is grown here at

Farm" is a statement of fact and this is not the sort of thing that can safely be falsified even though the dealer were so inclined. An offering that is so described may be assumed to have received more than usual care on the part of that particular seedsmen, and is usually worthy of a trial.

In the same catalogue are listed many sorts concerning the source of which nothing is said. If the house is a good one, the seed may be expected to have been bought with the best care available, but it is not likely to have been the object of special selection by that seedsmen. Of course seed bought by a dealer from a good breeder may be better than the results of a given dealer's own selections. In general, however, it is best to buy as near the source as possible, to buy from a house that specializes in a given item, and above all to choose a house which has built a reputation among commercial growers for thorough-going reliability.

Beginning the Year's Operations

The first weeks of the new year find the thoughtful grower bringing the plans for the coming season into definite form. In fact, greenhouse seed-sowing will begin in much of American Agriculturist territory before the end of the month.

There can be little quarrel with the average vegetable producer on the ground that he does not work hard enough or long enough with his hands. The danger is that he be so hard pressed with the tasks of each day that he neglects the head-work that is necessary for the best management of his operations. Intensive effort throughout the day results in bodily weariness and neither tends to encourage the long look ahead. For this reason the plans for the season should be developed as completely as possible before the rush is on.

Some say: "Why plan when you can predict neither the weather nor the markets?" Such being the case, planning requires even more skill and attention. Anyone can plan for a certainty. It requires intensive thought to master the situation so well as to be ready for each turn of conditions. Suppose the early cabbage crop hangs on two weeks later than usual, throwing celery out of the running as a second crop. What is the best thing to plant to afford a fair chance for both crop and market?

Advantages in Early Planning

Advance planning offers clear cut advantages. Economy of land may be gained. The situation mentioned above may be foreseen, and better plants may be used, so making timely maturity reasonably safe, and permitting the more profitable crop to be grown the latter half of the summer. Planning provides the best possible distribution of labor, of expense and of income. In many sections floating labor is hard to get. An even schedule makes it possible to work a few all-season men rather than large and small gangs picked up according to current needs. Expense and income well distributed make for better bank credit and lower interest cost—a smaller idle reserve tied up without interest to carry the peak load. Planning permits careful study of seed, fertilizer and plant problems. The best strains of seed are often entirely sold out by planting time. Planning makes it possible to prepare land in advance, to provide for cover crops and proper rotation, and to consider and relate all the factors of soil, market, climate and labor which work together toward success or failure. Best of all it makes a man think. It leads to reading, study and the asking of questions. It leads to the keeping of records, for a plan on paper is itself one of the most valuable of records.

Ditching Pays—Ditching doesn't cost money, but makes money. Orange County, N. Y., farmers found this true even when they had to blast 400 feet of heavy shale to get their ditch.

I can't get along without your paper since I have become acquainted with it.—Mrs. W. H., New York.

Who Should Carry the Family Purse?

(Continued from page 45)

The second remedy is to reform her after you marry her. Since this is impossible, I won't take time to tell you how to try to do it.

The third remedy, which is probably the best, is to shut your eyes and calmly let her bankrupt you. Perhaps she won't do it after all, and if she does you can start all over again and give her another chance. She may be a lot, as I was the first few days I worked in a grocery store. I ate more candy than my time was worth, but the novelty soon wore off, and my taste for candy was satisfied.

I realize that it is easier to have a joint account on a salary than it is for a man in business. I must confess that we do not keep accounts, but when our check arrives, we do budget it, and so we both know how much we have for incidentals. A lot of the so-called extravagance in wives is caused by the fact that the wife has no knowledge of what she can afford or how much her husband really earns.

It simply isn't a square deal for a man to expect his wife to come to him for every cent she wants to spend. Marriage is a partnership and not an agreement on the part of a woman to keep house for a man for the rest of her life for her board and clothes."

—H. L. C., N. Y.

"I believe every one has a desire to carry a purse. Whether we continue to carry one or turn it over to another's management, is a question which I wish we might each decide for ourselves. When I was four years old, a lady gave me a small glass box in which for years I stored my self-earned coins. These I spent as I chose. After I was married this little box was of no use to me for that purpose.

The first morning that my husband went to work he left his pocket-book with me for safe keeping. He has continued leaving it ever since. For some time he kept an account of our expenses and savings, but gradually he left that for me, and now, after fourteen years, he does not know the amount. I cannot say that the handling of money is a pleasure, sometimes it seems almost a burden. Yet I can truly say that the only sorrow I ever knew was the burial of our eight-year-old boy. However, I feel I owe my success with my home affairs to the little glass box and my mother."—Mrs. L. D., Pa.

And here is a letter which sums up the whole question in a business-like, sensible way:

"The question of 'Who should carry the family purse?' is one which should be settled fairly definitely before marriage. By this, I do not mean that it can be settled simply by making a decision as to which party shall control the family money. The problem of the apportionment of family finances is a delicate one. It is a problem which must involve a great deal of concentrated thought if a satisfactory solution is to be made. Unless this question is settled early, much unhappiness is likely to result.

The family money should be handled jointly. The wife should receive an amount sufficient to cover her household expenses, buy her clothing and that of her children, and, in short, to meet all expenses which come within her domain as mother, homemaker and housekeeper. She is the head of a very important enterprise, and in this capacity should have command of the finances necessary to it. In the same way the husband should have his share, according to his business and other needs. After the money for the necessary expenses of both husband and wife is provided, a certain amount may remain. This can be saved or invested as they jointly decide. Circumstances and conditions differ so widely that each couple must work out for themselves a satisfactory plan of apportioning their money. It is not so much a question of 'How much of the purse shall the husband carry?' and 'How much shall the wife carry?' Right here is a chance to prove whether or not marriage is a partnership. If it is, there will be more than one purse!"

—D. E., N. Y.

Common wood ashes are very good for scouring knives and forks.

GREGORY'S HONEST SEEDS

It Pays to Plant the Best

AS PRACTICAL farmers and seed growers, we have learned to look at things from the farmer's viewpoint. Our own experience has taught us the wisdom of planting the best seed obtainable. For instance, we have just paid \$15.00 a pound for the seed of a greenhouse cucumber to plant another season. This emphasis on quality has made it possible for us to satisfactorily serve critical gardeners for more than two-thirds of a century.

COOK SEED CO., WATERFORD, N. Y.

Do We Prune Too Severely?

Prominent Growers Say "Yes"

"DURING the first year my apple trees are trimmed back to about two feet high and with three branches," writes Arthur Sill of Wayne County, N. Y. "During the second year they receive practically no trimming, while in the third season I cut out a few of the inside limbs which cross. During the next two seasons little trimming is made. That which is done, however, is to develop the tree into a shape which conforms as nearly as possible to the ideal type.

"The older trees receive enough pruning to remove the suckers and to take out enough branches to admit light and spray materials. According to my observations, I believe the tendency is to over-prune apple trees, especially while young. To renovate real old apple trees, the head of the tree should be cut down radically just above the branches which have an outward tendency. The sides of the tree are then thinned. To facilitate matters early in the spring, I suggest that as much orchard work as possible be done during the winter months when the weather permits."

Right Pruning the First Three Years

"During the first three years my apple trees are trimmed only enough to avoid crotch limbs and to guide the shape which seems nearest to the perfect tree," is the message of C. R. Howard of Columbia County, N. Y. "During the next two years I keep constant watch of the trees and cut them back when the growth is abnormal. The older trees are pruned in the late winter, when the branches are not frozen. To renovate an old apple orchard I would cultivate and fertilize the ground to encourage new growth. Then, I would cut back the trees mercilessly.

"To put the commercial orchards in good shape for next season, I am planning to put particular attention upon the removal of dead wood, crossed limbs and a little outside thinning of the branches where they grow too closely together. I do not remove outside branches except where two are present, and if there is only room for one I will remove the upper one."

"It is my practice to give no pruning to apple trees under three years old," writes J. A. Hepworth of Ulster County, N. Y. "Between three and five years old I merely prune out the interlocking or crossed branches. The old trees are pruned at any time between November and April, when weather and labor conditions permit. I keep out the sprouts and thin out the branches for light and air a little bit every year.

Tendency to Over-prune

"It has been my observation that the tendency among fruit growers is toward over-pruning of apple trees. If I were to renovate real old apple trees this coming season, I would head them back severely. It takes two or three years to get an old apple tree in right condition. In general, I think that pruning should be done every year rather than occasional severe pruning."

"During the first three years that I have young apple trees, I simply cut out all crotches and crossed limbs and keep the tree open; in fact, this is my practice until the tree is five years old," writes T. E. Cross of Dutchess County, N. Y. "The older trees are pruned whenever there is time, in much the same way as the young trees. I aim in my pruning to retain as much leaf surface and bearing wood as possible. Sometimes I believe that the tree is

injured by over-pruning. In the case of real old apple trees, the means of renovation vary with the shape and condition of the tree.

"Until the young trees begin to bear I thin as little as possible and from my observation in recent years, I think the tendency has been to cut the trees too low. The limbs come down quickly enough when loaded with fruit and should not over-lap."

Profit by Past Experience

"In my apple orchards I have Baldwin and King in solid blocks and also the same varieties interplanted with one another," writes D. J. Marvin of Oswego County, N. Y. "If I was to do the same job over, I should specialize on the following varieties: Baldwin, King, Wealthy, Dutchess of Oldenburgh and Winesap. At present my trees are spaced 32 feet apart, but for new plantings I would set them 40 x 40 feet. As the trees get older they interlock and make difficult picking. I have eight acres in apples.

"To bring my apples into early bearing I care for the trees and the soil by practicing rotation of crops, consisting of corn, potatoes, wheat and clover. The clover is plowed under in the second year. This rotation is continued for 15 years, when the orchard is left in sod and used as a night pasture for my cows. I spray with Bordeaux mixture after the blossoms fall and again about 10 days after. During the rotation of crops I give the orchard a good coat of barnyard manure."

Choice Varieties Are Baldwin and Spy

"My principal varieties are Baldwin and Spy," writes John H. Lewis of Allegany County, N. Y. "These are planted in solid blocks. I have also one row of Belleflower, two rows of Russet, one row of the two varieties mixed, one row of King and two rows mixed, a block of King and a third orchard with all mixed varieties. If I was to do the same job over again I should plant the apples in blocks, with cherries interplanted between them. The varieties of apples I would use would be Spy, Greening and Baldwin. At present my trees are spaced 30 x 30 feet, but in new plantings I would space them 60 x 60 feet because they need more chance to branch and more sunlight for color. I now have 10 acres in apples and do not plan to set out any more this coming season.

"Since my trees are all old and large I have never given them special cultivation, except to trim them heavily when I first purchased the farm 10 years ago. Since that time they have received lighter trimming. I fertilize the orchard with barnyard manure and spray about three times a season. My apples are usually sold in bulk, as that seems to be the best way in this locality. The general run of orchards in this section is small."

Protect Orchard Trees—Valuable fruit trees are likely to be girdled by mice and rabbits if deep snows lay on ground for a long period. Remove grass from the base of the tree and mound a little earth around it; this will help to prevent injury by mice. Close mesh wire, tar paper or wood veneer bound with tarred string around the trunk to a height of twenty inches will give protection from rabbits.

Your paper is very popular.—PHILIP MENGES, Chautauqua, N. Y.

Farmers Back College Needs

News from the Snow-Clad Farms of New York

NEW YORK State Conference of Farm Organizations met in Syracuse, on the evening of January 5th, to give consideration to problems effecting all the farmers and all of the organizations of the State. Dean A. R. Mann, of the College of Agriculture, was present and outlined to the Board the deplorable conditions at the College which exist because of lack of adequate buildings for housing the different activities.

Considerable study has been given by the farmers of the State to the needs of the College and recommendations to the State were made by the farm organizations two years ago for a building program which when completed will give New York State a college of agriculture in keeping with the State's greatest industry.

Governor Smith in his first administration approved this building program as recommended by the farmers, and the Legislature made the appropriation for a dairy building, the first unit in the program. Governor Miller, while in general sympathy with the building plans, did not think that there was money available to carry the program forward at the time, and the program was therefore held up.

Conditions at the College are so bad because of lack of facilities and room that the Conference Board of Farm Organizations feel that there should be no more delay in the completion of the program as it was planned two years ago, and voted unanimously to so recommend to Governor Smith and the new administration. Senator Blauvelt who attended the meeting of the Conference Board stated that he was sure that Governor Smith was in sympathy with the idea of completing the college building program as rapidly as the finances of the State would permit.

Discuss Building Needs of State Fair

Some discussion was given by the Board to the building needs of the New York State Fair Grounds. There is need for a Horticultural Building as was stated in one of our recent issues and there is also need of a Coliseum. E. R. Zimmer, Secretary of the New York Holstein-Friesian Association made the point at the meeting that his Association was interested in having a Coliseum built on the Fair Grounds before the Horticultural Building was built, because the Coliseum might be the deciding factor in getting the World's Dairy Congress to come to Syracuse in 1923. Mr. Zimmer also made a very fair statement. He said that his Association would work in full harmony with the other organizations on this as well as on all other matters, and that his Association would not have suggested the building of a Coliseum before the Horticultural Building had been informed that there had been an agreement by the Conference Board that the Horticultural Building should come first. The Conference Board laid the matter of the State Fair buildings on the table until it was definitely decided whether or not the World's Dairy Congress would come to Syracuse.

Mr. H. E. Babcock resigned his position as secretary of the Conference Board of Farm Organizations because of so many other pressing duties and E. R. Eastman was elected to succeed him.

NORTHERN NEW YORK NOTES

Farmers in northern New York are suffering from a drought as severe as any normally encountered in summer months. Not in many years have springs and wells gone dry in December, and Christmas found farmers drawing water for their stock or driving them long distances to drink. Each day finds more men in the northern counties at their wits end to provide water for their animals and for their homes too in a number of instances. Some of the older men say that a similar condition prevailed about 42 years ago.

Clover in St. Lawrence, Jefferson and Lewis counties went into winter in very good condition, and bids fair for a good crop for the next season. The covering of snow has been very light so far, a total of only some five or six inches on

the average by the 20th of December, and most of that coming in the last week.

Jefferson County Pomona Grange is inaugurating a move for a uniform text book law for Jefferson County, for those schools outside of cities or any union free school district maintaining an academic department. Such a law has been functioning in St. Lawrence county and giving satisfaction. With the "hit or miss" text book system, it is a common experience for the renter to fit out his children with a complete set of books, only to find the following year when he moves to an adjoining town that he must go all the way around again as the books used in the new school are different.—W. I. R.

IN CENTRAL NEW YORK

Tioga Co.—Campaign for raising funds for Farm and Home Bureau committees have been appointed to canvass each town. The seventh annual convention of Farm and Home Bureau was held recently, with separate sessions in the morning and combined meeting in the afternoon. The speakers were Miss Jennie Jones, Montgomery Robinson and Jared Van Wagenen. The Nichols Male Quartette furnished the music. Farmers are generally talking about the pool. Non-poolers held a festive occasion at their new plant in Owego recently. Poolers claim they are making the most out of their dairies, and non-poolers claim the same, though bemoaning the cost of hauling. Some feel better regarding the milk situation and some do not. The price paid for milk is not in accordance with that of feed and labor. Farmers receive 45 to 50 cents for butter, eggs 54 to 65 cents a dozen, potatoes 60 cents to \$1 per bushel. Hogs are selling from \$10 to 20.—Mrs. D. B.

Chenango Co.—Farm Bureau and League meetings have been most important lately. Farmers are discussing the distressing price and the pool more than anything else. Poolers are getting attendance at their meetings, while non-poolers' meetings do not so much. Just now there seems to be a little better feeling toward the pool, due, I believe, to better prices and a little more information being given. Cabbage and potatoes are about all that is being sold except milk. Potatoes have not been bringing enough to pay for raising them generally. In a few cases they have trucked them for 35 to 40 miles, and have sold small quantities for \$1. Most have gone around 50 cents.—H. H. LYON.

Poultry Schools Successful

The series of poultry schools arranged by the County Poultry Committee of Suffolk County are proving very successful, as many as 200 poultrymen attending a single session. It is estimated that from 65,000 to 75,000 hens to be carried over this winter are represented in the flocks of the poultrymen present at the meetings. A charter has been issued to the Acme Duck Farm, Inc., of Eastport. Capital stock to the value of \$15,000 has been issued. The concern operates the plant of the late Hugh G. Seamans.

CUT YOUR OWN HAIR EASIER THAN SHAVING

You do not need any experience or practice to use the DUPLEX AUTOMATIC HAIR CUTTER. It comes to you ready for instant use, and five minutes after you receive it you can have your hair cut better than it was ever cut before.

The DUPLEX will cut as closely or trim as long as you wish it to be. No clippers or scissors are needed with the DUPLEX; it finishes the work completely. It cuts the front hair long and the back hair short. Trims around the ears, etc.

Inside a very short time you will have to pay \$2.00 for the DUPLEX. The price today is \$2.00, but while our present stock lasts we will accept this advertisement the same as \$1.00 Cash. Cut it out and send it with ONLY \$1.00 and we will send you the DUPLEX AUTOMATIC HAIR CUTTER, ready for instant use, postage paid, to any address. Send today. AGENTS WANTED.

Valveless - Blue Flame
BROODER

\$10⁰⁰_{up}

Unquestionably
the best way to raise chicks-

PUT every one of your chicks under a Wishbone Brooder. You'll get better chickens—stronger and healthier chickens. No more losses—the Wishbone gives every chick exactly the right amount of heat and fresh air in any weather. They're bound to thrive, to grow strong and healthy.

The Wishbone is beautifully constructed—it is simple, economical, and absolutely trouble-proof. Many thousands are in use in all parts of the country—every one giving 100% satisfaction, even in coldest Canada.

THE AMERICAN INCUBATOR MFG. CO., 405 Neilson Street, New Brunswick, N. J.

1000 EGGS In EVERY HEN

**If You Keep Chickens
CUT THIS OUT**

"The great trouble with the poultry business has always been that the laying life of a hen was too short," says Henry Trafford, International Poultry Expert and Breeder, for nearly eighteen years Editor of Poultry Success. The average pullet lays 150 eggs. If kept the second year, she may lay 100 more. Then she goes to market. Yet, it has been scientifically established that every pullet is born or hatched with over one thousand minute egg germs in her system—and will lay them on a highly profitable basis over a period of four to six years' time if given proper care.

How to work to get 1,000 eggs from every hen; how to get pullets laying early; how to make the old hens lay like pullets; how to keep up heavy egg production all through cold winter months when eggs are highest; triple

egg production: make slacker hens hustle; \$5.00 profit from every hen in six winter months. These and many other money making poultry secrets are contained in Mr. Trafford's "1,000 EGG HEN" system of poultry raising, one copy of which will be sent absolutely free to any reader of this paper who keeps six hens or more. Eggs should go to a dollar or more a dozen this winter. This means big profit to the poultry keeper who gets the eggs. Mr. Trafford tells how. If you keep chickens and want them to make money for you, cut out this ad and send it with your name and address to Henry Trafford, Suite 870 W. Herald Building, Binghamton, N. Y., and a free copy of "The 1,000 EGG HEN" will be sent by return mail.

A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.

Working along entirely original lines, Mr. Smith discovered why hens lay less in winter than in summer, and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certain to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large \$1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only \$1 on this introductory offer, otherwise, nothing.

Send No Money—just your name and address to M. B. Smith, 1210 Coca Cola Bldg., Kansas City, Mo. The two \$1 packages will be mailed immediately. When they arrive, pay the postman only \$1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

Penn State Fund Grows

As Grangers, Dairymen and Potato Growers Unite

THE milk producers of the southeastern part of Pennsylvania, through the Interstate Milk Producers' Association, recently joined in the emergency building fund campaign of the Pennsylvania State College by contributing the money equivalent of one day's milk supply toward the erection of a student dormitory to be built by the live-stock men of the State. The farmer milk producers in other parts of the State are undertaking movements in support of the Penn State \$2,000,000 drive.

Tioga Grange Gives \$1000

Scores of Granges throughout Pennsylvania have pledged funds to the Pennsylvania State College emergency building campaign for \$2,000,000 for student health and welfare buildings. One of the most recent of these pledges was for \$1,000 from the Pomona Grange of Tioga County, where the members are all enthusiastic boosters for State College. The pledge is so far the largest on record from a Grange organization.

Prominent Potato Grower Gives \$3000

"The Grand Old Man" of Pennsylvania's rapidly growing potato-raising industry, Dr. D. D. Fritch, of Mecumie, Lehigh County, has given his approval to the welfare building campaign of the Pennsylvania State College, with a pledge of \$3,000 toward the new student hospital.

Announcement is expected shortly that the boy potato clubs of Butler, Beaver, Potter and Cumberland Counties will have completed the raising of \$15,000 toward the hospital fund, or one-tenth of the entire amount needed.

PENNSYLVANIA COUNTY NOTES

Clarion Co.—We are having very fine winter weather. Up to the middle of December it had been very mild, without a great deal of rain. In fact, we have had a very excellent season, and farmers have been able to clear up their outside work very well. Some were rather late husking corn. Prices on farm products are low. Butter, 50c; eggs, 50c; corn, 40c; oats, 45c; wheat, \$1; fresh grade cows, from \$40 to \$90; pure-breds from \$100 to \$300; horses are low in price and selling slowly.—C. Reybuck.

Crawford Co.—Lots of fall plowing and work in general was cleaned up before snow comes. Our roads froze up quite smooth, so that traveling is not really bad. The temperature has been averaging from 10 to 20 degrees below zero. Many public sales are taking place, but things are not selling high. Most farmers are now hauling out manure and cutting wood. Eggs are bringing from 65 to 70c; butter, 50c; dressed pork, 13c; live veals, 10c; chickens, 16 to 18c live weight; potatoes, 75c; apples, \$1 a bushel; buckwheat, \$2 a hundred.—J. F. S.

CENTRAL NEW JERSEY NOTES

Wheat of the present year is badly infested with weevil and much of it is unfit for flour or seed. Poultrymen, however, are eager buyers, and there is an inadequate supply of grain for their use. Some of them who have invested all they have in large plants look with some fear on the rapid increase of large commercial plants. Two to four thousand layers is the usual thing. The long drought remained unbroken the second week in December and wheat has made a poor growth. There is a decreased acreage; early sown has a poor stand, while that sown late in October and early November has come up nicely. The cold dry winds retarded growth.

Many farmers are backward in husking, and some fields were untouched in early December. The many public improvements, state roads, new schools and buildings of many sorts, have drawn all laborers from the farms. Farm owners have, in many instances, postponed their own work to accept the attractive pay in their pursuits. There are several corn shows staged for this month, but it is very doubtful that the splendid display of last year can be

equaled. The apple crop has been more than abundant and prices have ruled low, but much better than in more remote localities. Losses have been large owing to unfavorable weather and lack of pickers. A great quantity of cider is being made and has a fair demand. Early pullets have been laying steadily for several months and the condition of the flocks is very favorable. Pasturage has been prolonged later than usual notwithstanding the drought.—George E. Schwartz.

Monmouth Co.—Practically all fall work has been completed. Potatoes have been fairly well cleaned up. No money was made last year. Undoubtedly acreage will be curtailed this year by one-half. Farmers are arranging for a greater variety of crops and vegetables. Corn, 50 cents a sheaf, rye, \$17 a ton, hay, \$18, corn stalks, 3½ cents a bundle. Milk in Trenton, 7 cents.—C. W. H.

Hunterdon Co.—Rains during the middle of December brought great relief to this part of the State. We have been suffering from drouth since August, and many small streams have been dried up. Corn husking was all done up to the middle of this month; farmers have been ready for heavy weather. Many farmers say that they have never known such conditions for fall work. The weather has been very dry, windy and cold. Much fodder was lost. Farmers are complaining that their cows are not doing well. In fact, everything seems to be going endwise. Everything the farmer has to buy is too high for what he has to sell. Eggs bringing 60c, butter, 55c; wheat, \$1.10 to \$1.20; corn, 70c; oats, 50c. Apples are dull; hay, \$18; pork, 13 to 14c.—J. R. F.

CENTRAL OHIO FARM NOTES

W. E. FARVER

During the past several weeks the weather has been quite changeable. Now the mercury is hovering around 10 above and the frozen ground makes traveling difficult on the mud roads. Wheat has had a fair chance, although dry weather held it back somewhat. Springs and wells were very low all fall, but rains during past week or two have accelerated the flow of water.

Farmers are busy with seasonal activities; hauling manure, cutting and preparing firewood and butchering taking lead at present. Butchering is mostly done, many hogs having been killed for home use. Stock went into winter in good shape. Some still running on pasture by day at present. Never have we seen stock out so late in the season here. Considerable live stock being marketed and all in good condition. Prices have remained quite uniform all fall.

Eggs are selling locally at 53 cents now—62 cents was highest here. Very few flocks were busy at the time prices were up. Late hatching resulted in a lot of immature pullets. This means spring eggs. For some reason or other many whose pullets were hatched early did not get any eggs. Not all can be laid to the feeding, for among these were good feeders. Seems as if some seasons are not conducive to late fall and winter egg yields.

Professor Vickers, of Ohio State University, met with the flock record keepers at Millersburg, November 29, in an all-day session. Vickers is a live wire, and he kept the bunch awake and interested from beginning to end. All seasonable topics were touched, and the meeting ended with a mash hopper and baffle board ventilator construction demonstration on one of the demonstration farms near Millersburg.

Locate Wet Spots Now—The farmer would do well to inspect his field of corn at this time, noting all low, wet areas that have failed to produce on a par with the rest of the field. Plans should be made now for draining these wet spots after the crop has been harvested and before cold weather sets in.

Lights in the Poultry House

Mrs. F. W. Owen Tells How She Increased Egg Yields

I HAD very good luck this summer. By October 1st, I had 325 pullets and 85 yearling hens in my laying houses. Our farm lighting plant was installed in October and by November 1st, was ready for use. At this time the pullets were five months old and part of the hens had molted but were not laying yet. The hens which had not molted were laying about a dozen eggs a day. The pullets were large in size and had had free range all summer, so were strong and healthy, and with a little coaxing, ready for a good winter's work.

The lights were turned on November 4. We got eight eggs from all of the flock that day. At the end of a week they had increased to 20 eggs a day. In just 20 days, on the 24th of the month, they laid 100 in a day. The 4th of December, just one month from lighting, the number was 155 which jumped to 200 on the 8th. On the 19th, 222 eggs were laid. About 30 pullets were too young to lay so you see this is almost 60 per cent production.

One point I notice is the regularity of the hen's laying, the number of eggs now averaging about the same from day to day. I also notice that very few eggs are laid after 3 o'clock in the afternoon and not very many on the roosts as many of the hens will get on the nests almost as soon as the lights are on in morning. If plenty of shells are kept before the hens, I have practically no loss from soft shelled eggs so do not think I am forcing the hens too much.

Feed and Care to Get Eggs

As I have told of my results, I will now try to give a few suggestions as to how I feed and care for my flock to obtain eggs. The lights are all controlled from the house and are put on at 4:30 in the morning and as there is always feed left over, I do not feed until 5 o'clock. Then I water and give about one quart of mixed grain to every 30 or 40 hens. The mixed grain is composed of one bushel wheat, one bushel buckwheat, and one-half bushel heavy oats. At 9 o'clock I feed about the same amount of grain again, water, fill dry mash boxes and gather eggs.

Oyster shells are always kept before the hens. The dry mash is mixed as follows: 200 pounds wheat bran, 200 pound meal, 100 pound gluten, 100 white middlings, 100 meat scrap. Every other batch I use only 100 pounds of bran as I do not want the hens to lose weight. At noon I give apples, potato parings or whatever green feed I have, refill water dishes, gather eggs, etc.

About 2:00 or 2:30 I give a warm mash of the dry feed mixed with water or sometimes cooked potato parings. I am careful to feeding only what the hens clean up in 10 or 15 minutes. At dusk the lights are turned on again and at 5:30 the hens get their last feed for the day which consists of one-half cracked corn and one-half mixed grain. One quart of grain is fed for about every twelve or fifteen hens. As the floor is kept well littered with chaff and straw, quite a lot remains for the next day and the hens keep busy most of the time. The coops are kept clean and dry. Plenty of fresh air is admitted through 2 feet by 4 feet open spaces, two or more to a coop. I am very careful to keep enough oyster shells in the hoppers so the hens will not be compelled to eat the very fine particles in the bottom.

Range Restricted in Bad Weather

Then hens are given free range when there is no snow on the ground. By feeding a large amount of grain at night the hens will go to roost even with the lights on and have plenty of feed to last well into the night. One-half or three-quarters of an hour after the hens are fed at night they will all be on the roosts and the lights can be turned off. One 50 watt bulb is sufficient for a coop 12 feet wide and up to 24 feet in length. It should be placed nearer the front than the back of the coop so as to light the floor under the dropping boards.

I have been in the poultry business for 15 years and have learned many lessons in the hard school of experience.

I am the first one in this vicinity to install lights in my henhouse and I am well satisfied with their success as a means to greater winter egg production. I am sure that electricity will prove a great help to poultry keepers and sincerely hope that the readers of American Agriculturist will gain help and encouragement from my suggestions and have a happy and prosperous New Year.—MRS. FLOYD W. OWEN, Steuben County, N. Y.

MADISON SQUARE POULTRY SHOW BREAKS RECORD

The thirty-fourth annual occurrence of this Premier event in the Poultry World takes place from January 24th, to January 28th inclusive. Entries closed on the 3rd, with by far the largest number of exhibitors ever on record at this show. Every State in the Union is represented, either with poultry or pigeons, rabbits or covies. Geography makes no difference in the minds of exhibitors, when it comes to Madison Square Garden. Entries as far west as California and from almost every Province of Canada, as well as a large entry from Lord Dewar, of London, England.

One of the educational features of intra-state interest will be a judging contest composed of teams of students from the Agricultural Colleges of Connecticut, Massachusetts, New Jersey, New York, North Carolina and Pennsylvania. Club teams of boys and girls will be entered also from Connecticut, Massachusetts, Mississippi and New Jersey. These judging contests will be held Friday morning, January 26th, at nine o'clock.

Big Corps of Judges

Judges of international reputation will handle the numerous classes. Some indication of the magnitude of their task will be appreciated when we observe that it takes these twenty-two experienced men two full days to do their work.

Keen interest centers this year in the competition for a special prize of \$250 cash for the best exhibition pen in the show, a pen consisting of a male and four females. The "Tex Ricard" cup for the best display of Pit Games has brought out entries from several places in England. Mr. George McKee Bowman, of the Biltmore Hotel, is offering two cups, one for the foreign exhibitor winning most points in Bantams, and another for most points on Sussex. The Rufus Delafield Memorial Cup is offered for the best Buff Orpington Cockerel.

Pekin Duck breeders will gather from all parts of the country with large exhibits for their National Club meeting in commemoration of this being the fiftieth year in which these ducks have been bred in this country.

This Show will see the introduction of another new variety of poultry—the Chanticleer. It marks the successful culmination of a series of experiments begun about fifteen years ago by a Trappist Monk, Brother Wilfrid by name, at the Canadian School of Agriculture in the Province of Quebec.

PECULIAR TURKEY TROUBLE

My turkey gobbler is affected with some thing that causes a swelling of the head and discharging from the nose. We thought it was just a cold, but now the rest of the turkeys are acting in the same manner. They dig their necks making them blood-red and sore. The tom's head swells to such an extent that his eyes are often almost closed. The birds do not seem to be failing.—(Wilton T. Powell, St. Lawrence County, N. Y.)

A first thought seems to indicate some contagious throat trouble. Isolation of unaffected birds should come first. Apply a 10 per cent solution of argyrol to the head and throat, using a camel's hair brush or feather. The following may be procured at your local pharmacy, and added to the drinking water every time the supply is renewed: Tincture capsicum, ½ ounce, and Fennell water, 1 quart. One teaspoonful is sufficient in a pint of water. Thorough disinfection of the roosts and house should be taken into consideration, using some of the creosote or kerosene preparations.

Get Winter Eggs!

See to it that there is song and cackle, scratch and action, going on in your poultry yard.

That's when the eggs come.

Feed

Dr. Hess Poultry

PAN-A-CE-A

See them get busy. It gives hens pep.

Nux Vomica is what does it—that greatest of all nerve tonics. A Pan-a-ce-a hen can't hold still. It's her good feeling that makes her hop around.

Pan-a-ce-a has Quassia in it to make hens hungry. Great combination! One makes them eat—the other helps them digest what they eat.

No dormant egg organs when that combination gets to work on a hen's system. You just get eggs—eggs.

A Pan-a-ce-a hen is always a hungry hen—an industrious hen. She gets off the roost winter mornings, ready to scratch for her breakfast.

Tell your dealer how many hens you have. There's a right-size package for every flock. 100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail 60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum For fewer hens, there is a smaller package.

Why Peerless Fence Satisfies

PEERLESS WIRE & FENCE CO. Cleveland, O.

Having a general acquaintance with the desirability of Peerless Fence and the well managed company, I can highly recommend it as the best all-purpose fence in this country. I know of fence still in use which has been up for 20 years. Yours truly, Henry W. Stevens, Tecumseh, Mich.

Peerless FENCE

Now Sold Direct from Factory

Our New Plan of selling the famous Peerless Fence direct from three big factories is "glad news" for farmers. It means the cutting out of all "in-between" profits and a slash in prices that will save farmers thousands and thousands of dollars. Now you can get this well-known, high-standard fence, also gates, steel posts, barb wire, smooth wire, paints and roofings, at the

Lowest Prices Ever Quoted

on Peerless Fence, Gates, Roofing and Paints. Don't fail to send at once for our New, Direct-from-Factory Peerless Catalog—over 100 pages of sensational bargains—prices that will be a glad surprise to you. For example:

Peerless Farm Fence, per rod, 17 cts and up	
Steel Farm Gates, each . . . \$3.65	Lawn Fence, per ft. . . . 7cts
Steel Posts, each . . . 22cts	Paint, per gallon . . . \$1.19
Barb Wire, 80 rod spool . . . \$2.47	Roofing, 100 sq. feet, roll . . . \$1.25

And so on, throughout this great money saving book, our prices will be a revelation to you. The same, old time, high quality—the prices cut to rock bottom through our change in selling direct from factory to you.

Why I Chose Brown Swiss

Some Surprising Facts About A Little Known Breed

IN the spring of 1919 the writer assumed the duties of herdsman on a Montana dairy farm. The herd consisted of about sixty pure-bred Brown Swiss cattle. It was my first experience with this breed, therefore they were watched with an "eagle eye."

Each cow's milk was weighed and her record carefully computed at the end of every month. In this manner it was easy to establish concrete facts concerning the value of each cow rather than to employ the ordinary "guessing system."

It was plainly evident that the Brown Swiss were unusually good grazers and efficient consumers of roughage. Without an exception every cow produced very liberally. The herd test ran about 4 per cent. That there were no "lemons" in the entire herd raised a question in my mind—Is this an accomplishment

on test, and it is expected that 1922 will bring the breed average well above 11,000 pounds milk and 450 pounds butterfat.

Compact, well-held udders of this breed accounts largely for so much freedom from teat troubles. Quietness and gentleness aid them in longevity, as many cows from 15 to 20 years of age are breeding regularly and producing well.

On May 18, one of our cows, Beauty Collier, freshened—a surprise, however, as the owner had her booked to freshen later in the summer. We had decided to put her on test along with ten other cows. She had no fitting. Unfortunately she had been milked up to calving. She started off at a good clip and was soon giving 60 pounds milk per day. Even under her handicap we foresaw that she would make a cred-

True Brown Swiss Type

Nellie's Stasis, champion Brown Swiss Bull at the National Dairy Show, owned by L. S. Marshall & Son, of Michigan

of a breeder or a characteristic of a breed?

Within a few weeks I became rather enthusiastic over the Big Brown Breed and wanted to learn of other herds rather than just the one under my care and observation. Immediately I got in touch with other herds men and found that the merits of the herd in which I was working were possessed in a similar degree by other herds in both Switzerland and America. This was evidenced by official records, and especially in cow-testing associations where the Swiss invariably give good account for feed consumed.

An Old European Breed

With much interest I found that Switzerland is the country where the breed has been developed. For many centuries this peaceable little republic nestling in the heart of the Alps has been famous as a dairy center. Even to-day it occupies one of the highest places among nations in regard to cattle and dairy products. The best dairies in Germany, Italy and bordering countries are made up of Swiss stock whose produce has long commanded a premium in Berlin and other European cities. Size, beef qualities and milk production tend to class the Brown Swiss as dual-purpose cattle. So many reports of high producing cows were made, however, that in 1922 the American Brown Swiss Cattle Breeders' Association organized a Registry of Production.

Owing to the fact that this organization is in its infancy and that most cattle of this breed are owned by farmers of only ordinary circumstances, the Brown Swiss Cattle in America have never completed very many sensational records. Yet their owners are justly proud of the high average in milk and butterfat made by the breed. Furthermore, each year shows that rapid strides are being made. Already this year the two-year-old record has been raised from 558 pounds butterfat to 570, three-year-old from 585 to 722, and the mature-cow record from 798 to 927. Many other good cows are now

itable record. During the month of June she averaged 75 pounds milk a day. Her high day came in July, which was 80.1 pounds.

Production Under Average Conditions, and Less

Pasture was good for the first four months, and Beauty cared little for grain, yet she averaged 71.6 pounds milk a day, this being more than double the production of the average cow in the United States for an entire year and produced at less expense.

October had come and the Montana days were chilly. The mercury dropped to zero. We were not favored with a comfortable barn in which cows could be kept. A straw-stack afforded their only means of shelter. Beauty had to take her medicine with the others of the herd. Her previous half-dozen winters had fitted her for the job. Fortunately she had a great capacity for feed and a fondness for alfalfa hay. She seemed to realize that the more she ate the more would be left to produce milk after a required amount was taken by nature to melt the snow which fell on her back.

During the winter a number of good cows freshened—several belonging to the Beauty family. It seemed easy for these cows to produce from 60 to 80 pounds milk a day. In fact, Beauty Collier 2d, a full sister to Beauty Collier, gave 81.6 pounds on January 31.

Hardiness and endurance were displayed on every hand. Calves often froze their ears, and occasionally an ear came off. Yet they made vigorous growth. A granddaughter of Beauty Collier 2d won second prize at the National Show, and both ears were frozen off tight to her head.

Old Beauty completed her 305-day double-letter test with 18,076 pounds milk, 633 pounds butter. Within her year she produced 19,664 pounds milk and 709 pounds butterfat. The grand cow freshened again just twelve days after finishing test, and gave over 60 pounds milk a day from two milkings. This great cow returned \$600 worth of

Senate Reports Voigt Bill

Dairymen's League Announces December Pool Price

THE Senate Committee on Agriculture has reported favorably the Voigt Anti-filled Milk Bill. This constitutes one more step toward the passage of this bill to protect the public health and the dairy industry by forbidding the movement in interstate and foreign commerce of compounds of skimmed milk and vegetable oil made in the semblance of milk.

The Voigt bill passed the House of Representatives by a large majority in May, 1922. It has been in the Senate Committee ever since.

The comments of the Senate Committee in its favorable report on this bill are extremely interesting. The report says that "your committee does not doubt that the sale of filled milk as at present carried on is a violation, if not of the letter, of the spirit, of the Pure Food and Drugs Act." The report states that "investigations in many cities revealed that dealers were selling the compound as being as good and better than regular evaporated milk."

The Committee also points out that this substitute is used in some hotels and restaurants and by ice-cream makers in the place of genuine milk, and that a label could not protect the consumer against such fraud. The Committee says "vitamines, which are so necessary to main health, are not found in vegetable oils and fats. It is therefore all the more necessary that we supply the vitamins in the milk. Milk is the one chief food of the nation, and no adulteration of it or substitution for it should be permitted."

Committee Appreciates Importance of Dairying

The Committee's comment on the importance of the dairy industry is also interesting. "The civilization of our country is dependent upon the dairying industry. We should do everything possible to encourage it. We need it to preserve the fertility of our soil, and the time to prohibit the filled milk traffic is now, before it has done greater damage to our health or to one of our basic and indispensable industries."

The Senate Committee is to be congratulated upon its report on this important bill. It now remains for the Senate to pass it. It probably will be passed if it can be brought to vote this session. You can do no single act of any more importance to your business than to write the Senators from your state urging on them the necessity of pressing the Voigt Filled Milk Bill for passage and for voting in support of it.

DECEMBER POOL PRICE \$2.82

The Dairymen's League Co-operative Association announces \$2.82 a hundred as its gross pool price for the month of December. From this 7 cents per hundred are deducted by the association for expenses of administration and advertising and 20 cents are borrowed by the association on its certificate of indebtedness plan. This leaves a net cash price to farmers of \$2.55. This is the base price for milk containing 3 per cent butterfat in the 201-210 mile freight zone from New York City.

The association calls attention to the fact that the net cash price of \$2.55 to farmers is 28½ cents per hundred more than the November price. The December price compares very favorably with the December 1921 price which was \$2.39.

PUTTING UP ICE

CHARLES L. STILES, NEW YORK

Now that the cold wintry season is again at hand too much cannot be said about the importance of putting up ice. It is essential that sufficient quantity be stored to tide the dairyman over next summer's hot spell, which is sure to come as the seasons pass and go. Although it is essential that one should have a well-built ice house, very good results can be obtained in utilizing an old barn or outbuilding for packing away the season's supply. Of course, the ideal place for storage is in a double-walled house, especially built for storing ice, especially where it is possible to have air space to cut down the rate of melting.

It is not really necessary to have a modern, up-to-date ice-making tools. Of course, they lessen labor and speed up the work considerably, but very good results can be obtained if just an ordinary cross-cut saw and a long board used as a straight edge, so a straight line can be followed in cutting out the square blocks. In order to facilitate rapid handling and make it more convenient in packing, the cakes should be cut in rectangular forms. Pains should be taken to keep the edges straight, as it packs very tightly, and consequently keep much better.

Overcoming the Help Problem

A good plan to follow is to change work with neighbors during the ice-harvesting period, especially if the ice is to be hauled a considerable distance. It calls for heavy labor at its best, and having plenty of help around is highly essential. It is a very unpleasant experience to have a big mess of milk, perhaps \$15 worth, sent home some sultry morning next July. But that happens once in a while in the best regulated dairies. A few dollars spent in putting up a quantity of ice at this season of the year will eliminate much of the danger of such an occurrence taking place.

The quantity put up, of course, depends upon the size of the dairy. But three tons per cow is ample allowance if milk is being produced for the fluid market. That allowance is sufficient to overcome wastage and to take care of the household requirements as well.

Sawdust, ground cork or poor quality swamp grass, make good coverings. Personally, I prefer sawdust, if it is available, as it is easy to handle, more compact and makes a mass more air tight. It is quite essential that air should be kept from the ice as far as possible.

Why I Chose the Brown Swiss

(Continued from page 54)

milk in one year, this being sold to a local creamery. Moreover, she had a three-year-old daughter that produced 15,154 pounds milk and another daughter milking in the two-year-old class that reached 62 pounds milk a day and 1,726 pounds in a month.

High Herd Average under Severe Conditions

The entire herd of milking cows averaged over 10,000 pounds milk. They had no silage. They slept outside even when the thermometer registered 40 degrees below zero. Such performances lead to a definite conclusion—that there were no "lemons" in this herd, is truly an accomplishment of a breeder, made possible by the strong characteristic of a breed to "produce and reproduce."

With a bunch of "just" cows on the home place, and being attracted by the Swiss, my father decided to give the Big Brown Breed a trial. Nine young females were purchased. Eight were of Beauty breeding. Two more were soon added. Last year the herd averaged 11,294 pounds milk and 560 pounds butter.

Jura Master's King was selected to head the herd. King was from a splendid high-testing two-year-old heifer whose two nearest dams average 16,353 pounds milk and 632 pounds butter-fat. Along with this production he has correct type. As a calf he finished the fair circuit without defeat, his victories being at the Iowa, Illinois and Wisconsin State Fairs, Waterloo, N. Y., and the National Dairy Show. Our Brown Swiss calves have been very pleasing. They have averaged 94 pounds when one day old, although mature cows usually drop calves weighing from 100 to 110 pounds. They gain from 40 to 48 pounds during their first month.

King's heifers are now of breeding age and are a very promising lot. They show highly developed udders and milk veins. Their top lines are of the kind that enabled their sire to carry off the blue ribbon in keen competition.—A. E. DEAN, Chautauqua County, N. Y.

Prove it — this way

Don't take anyone's word for it that KOW KARE definitely increases the milk yield. Actual proof is too easy to secure.

Make a simple test — and make it now, so that you may benefit all winter and spring by what it proves. Select a part of your herd — even one cow — and place in her feed morning and evening, for just one week out of the month, a tablespoonful of KOW KARE. If you keep accurate production records, you will be surprised at the increased yield, and at the surprisingly low cost of the treatment.

The reason is simple. The vigor of the cow's digestive and milk-making organs "runs down" during the winter months when green pasture is not available. KOW KARE has the medicinal properties to keep these organs toned up and working at summer capacity.

It is just this building-up of the genital and digestive functions that makes KOW KARE so valuable in treating the diseases which originate in these very organs, such as Abortion, Retained Afterbirth, Barrenness, Scours, Bunches, Milk Fever, etc. No medicine shelf is complete without this nationally-used cow remedy.

KOW KARE is sold by feed dealers, druggists, general stores; large size \$1.25; medium size 65c. If your dealer is not supplied, we will send postpaid. Our valuable book, "The Home Cow Doctor," free.

Dairy Association Co., Inc., Lyndonville, Vt.

UNADILLA SILOS

They Lead

MORE Unadilla Silos are bought each year than of any other two makes in the East. They lead because of their economy, convenience and exclusive features. The Unadilla door-fasteners form the famous, wide, safe, permanent ladder under the door opening. All hoops are adjusted from this ladder. The continuous door opening and Unadilla airtight but non-sticking, non-freezing doors permit silage to be shoved out instead of pitched overhead.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

REAL RED REDS, Single Comb, purebred, deep, rich, red, vigorous Cockerels and Pullets; three, four, five dollars; satisfied customers. MEADOWBROOK FARM, Route 3, Box 210, Lancaster, Pa.

MANY VARIETIES—Pure Bred Poultry. Baby Chicks and Pigeons at low prices. 100 page book in colors describes them. Mailed for 5 cents. FRANK FOY, Box 14, Clinton, Iowa.

REDS—Single Comb Rhode Island Reds. Harold Tompkins and Mahood strains. Satisfaction guaranteed. Prices right. W. D. HUTCHISON, Claysville, Pa.

HATCHING EGGS, from Pure Bred, Reds, Rocks, Minorcas, Leghorns, Anconas. Fine breeding males reasonable. L. D. CLARK, Binghamton, N. Y.

STOCK EGGS—Chicks White Leghorns, Reds, Black Minorcas, White China Geese, prices reasonable. BROOKSIDE FARM, Key-mar, Md.

COCKERELS—Golden and Silver Wyandottes. Good ones \$2.50 each; extra good \$3.50 each. J. L. HOAK, Spencerville, Ohio.

TOULOUSE GEESSE, ROUEN DUCKS. Grey Call Ducks, Pearl Guineas. CRANE BROOK FARM, Port Byron, N. Y.

WHITE WYANDOTTE COCKERELS. Mammoth Pekin ducks, Pearl Guinea. LAURA DECKER, Stauffordville, N. Y.

S. C. BUFF ORPINGTON COCKERELS. Exclusively Poertner strain sturdy farm raised. I. B. ZOOK, Ronks, Pa.

CHOICE DARK RED, S. C. R. I. RED COCKERELS from selected stock. SETH J. COOK, Byron, N. Y.

JERSEY BLACK GIANT COCKERELS. May hatched \$5. THOS. B. BOWLBY, Elmira, N. Y.

PARDEE'S PERFECT PEKIN DUCKLINGS. Eggs, catalogue. ROY PARDEE, Islip, N. Y.

LARGE AYLESBURY DUCKS; pairs \$7. M. V. CALDWELL, Lisbon, Ohio.

60-R. RED'S laying. Lot \$105. DANIEL WEYANT, Highland Falls, N. Y.

BUFF ROCK COCKERELS. EDGEWOOD FARM, Ballston Lake, N. Y.

TURKEYS

TURKEYS BLACK AND BRONZE. The big, husky hardy ones. Toms \$9.50 to \$12.50. Hens \$7.50 to 9.50. A few fine first prize winning Pekin duck—both sexes at \$3 each. Several wild Mallards at \$2.50 each. All very fine stock. ROCK-CLIFF FARM, Brogueville, Pa.

TURKEYS—Hens and Toms—with size and quality. Pairs and trios no akin. Mammoth Bronze, Bourbon Red, Narragansett, White Holland, write, WALTER BROS, Powhatan Point, Ohio.

TURKEYS. 40 giant Bronze and Bourbon Reds. 25 Ind. game Cockerels. Write quick. Box 565, Freeport, O.

MAMMOUTH BRONZE TURKEYS. Toms and Hens. F. B. GARNSEY, Clayton, N. Y.

MAMMOUTH BRONZE TOMS. LAURA DECKER, Stauffordville, N. Y.

BEES

HONEY—Strictly pure, first quality, extracted clover-basswood. 10 lb. pail \$1.75; 5 lb. pail 90 cents delivered anywhere. THOS. BRODERICK, Moravia, N. Y.

PURE HONEY—Circular free. ROSCOE F. WIXSON, Dept. A. Dundee, New York.

TOBACCO

HOMESPUN TOBACCO. Chewing, 5 pounds \$1.75; 10 pounds \$3; 20 pounds \$5. Smoking, 5 pounds \$1.25; 10 pounds \$2; 20 pounds \$3.50. Send no money, pay when received. COOPERATIVE TOBACCO GROWERS, Paducah, Kentucky.

NATURAL LEAF TOBACCO. Chewing, 5 pounds \$1.75; 10 pounds \$3; 20 pounds \$5. Smoking, 5 pounds \$1.25; 10 pounds \$2. Pay when received. TOBACCO GROWERS' UNION, Paducah, Ky.

KENTUCKY TOBACCO—Three year old leaf. Pay for tobacco and postage when received. Chewing 5 lbs. \$1.65; Smoking 10 lbs. \$1.50. FARMERS' GRANGE, D100, Hawesville, Ky.

LEAF TOBACCO—Chewing 4 lbs. \$1.40; 12 lbs. \$3.60; Smoking 4 lbs. \$1; 12 lbs. \$2.40. Collect on Delivery. KENTUCKY TOBACCO GROWERS, Sedalia, Ky.

CIGARS

BUY YOUR CIGARS direct. 50 LaColumnas, prepaid for \$1.50. Agents wanted. HAVANA SMOKEHOUSE, Homeland, Ga.

Your Market Place

This is YOUR Market Place. It helps you to sell, buy, rent or exchange; to secure farm help or to find work. The address must be counted as part of the advertisement, and each initial or number counts as a word. Because of the low rate to subscribers and their friends, cash must accompany your order. Copy must be received by Monday to guarantee insertion in the following week's issue. Phrase your wants, as others have secured your interest, by following the style of the advertisements on this page. Classified advertisements are inserted at the rate of five cents a word per insertion; no single advertisement accepted for less than one dollar. Address all communication to:

American Agriculturist, 461 Fourth Avenue, New York City

REAL ESTATE

CALIFORNIA STATE LANDS—The State Land Board of California has for sale 87 irrigated farms at Ballico, near Merced, in San Joaquin Valley on main line Santa Fe Railway. The State makes it possible for you to own one of these farms, only requiring 5 per cent of purchase price, remainder in semi-annual installments extending over 36½ years with 5 per cent interest annually. Here is an opportunity to become a home owner on terms as favorable as renting. It will be a long time before any more land will be available under such generous provisions. Money advanced on improvements and dairy stock. Those already located very enthusiastic; you can farm all year in California; all deciduous fruits profitably grown; alfalfa a paying crop. Ideal conditions for stock and poultry; many persons long some day to make their homes in California, with its winterless climate, plenty of sunshine, seashore and mountains, fertile valleys, paved highways, very efficient marketing, excellent schools; State Board's pamphlet, also Santa Fe folder describing San Joaquin Valley mailed free on request. C. L. SEAGRAVES, General Colonization Agent, Santa Fe, 951 Railway Exchange, Chicago, Ills.

FOR SALE—160 acres, 10 miles east of Oil City, Pa., about half under cultivation; balance in timber and pasture; with good 8 room house and good barn and other buildings; 2 good orchards, at a low price of \$4,000. Address, J. C. WOKASIEK, Denus, Pa., R. F. D. Box 42.

FOR EXCHANGE: Small farm, for vacant lots. Also other farms for exchange for income property. S. M. BREED, McDonough, N. Y.

FOR SALE. Two of the best fruit farms in Western New York, near Lake Ontario. SETH J. T. RUSH, Morton, N. Y.

FEMALE HELP WANTED

THE OLIVIA SAGE SCHOOL OF PRACTICAL NURSING offers one year's course in special bedside nursing to limited number of women. Classes formed quarterly. Pupils receive maintenance, uniform and salary. Apply to DIRECTOR, NEW YORK INFIRMARY FOR WOMEN AND CHILDREN, 321 East 15th St., New York.

WANTED—Single women as attendants in State Institution for feeble-minded; salary, \$44 per month and maintenance. Apply stating age and inclosing letter of reference (from previous employer if possible) to SUPERINTENDENT, LETCHWORTH VILLAGE, Thiells, N. Y. Rockland Co.

WANTED—Seamstress for boys' school, under 37, experience preferred; understand mending boy's clothes and making shirts. Salary \$60 per month and home. Three references first letter. SUPT. COUNTY TRAINING SCHOOL, Lawrence, Mass.

NEAT capable widow or maiden lady to do housework on farm, family of five, good home, electric conveniences, state wages expected in first letter. References. MRS. A. L. MOATS, Jamestown, Pa.

MALE HELP WANTED

WANTED—Middle-aged couple with no children, nor furniture to assist with general farm work, must be reliable and dependable. Good position to right party. A. L. YATES, Whitney Point, N. Y.

ALL men, women, boys, girls, 17 to 60, willing to accept Government positions, \$117-\$190, traveling or stationary, write MR. OZMENT, 258 St. Louis, immediately.

ACTIVE MAN TO TAKE ORDERS FOR NURSERY stock and hire agents. Highest commission, exclusive territory. THE WAYNE NURSERY, Inc., Newark, N. J.

WANTED an experienced Dairyman and farmer to work my Farm on shares. Best suited for the man who has help. EVERAL MCINTIRE, Worthington, W. Va.

SITUATIONS WANTED

FARM MANAGER OR SUPERINTENDENT open for engagement about February 1. Nine years executive experience. Familiar with large operations. Experienced in handling men and machinery, care and management of livestock and poultry, cow testing, orcharding, general farm crops drainage and marketing. Would like to hear from those having first-class business proposition. Address box B. K., AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

PRACTICAL—experience—farmer wants—position—as manager on stock farm, can furnish references. Box No. 47, R. D. No. 2 Allenwood, Pa.

WOMEN'S WANTS

ALL WOOL KNITTING YARN for sale, from manufacturer at 95c, \$1.35 and \$1.60 a pound. Postage paid on \$5 orders. Free samples. H. A. BARTLETT, Marmory, Maine.

PATCHWORK—Send fifteen cents for household package, bright new calicoes and percales. Your money's worth every time. PATCHWORK COMPANY, Meriden, Conn.

AUCTION SCHOOLS

LEARN AUCTIONEERING AT HOME—Full course, diploma. Free catalog. AUCTIONEERS' SCHOOL OF EXPERIENCE, 1215 Arlington Ave., Davenport, Iowa.

SEEDS AND NURSERY STOCKS

SEED POTATOES—Russet Rural Variety. Selected twelve years. FAIRACRES POTATO FARM, E. R. SMITH, Specialist, Kasoag, N. Y.

ALFALFA HAY—First and Second Cutting, also Light and Heavy Clover Mixed. Ask for delivered prices. SAMUEL DEUEL, Pine Plains, N. Y.

SWINE

REGISTERED CHESTER WHITE PIGS. Only a few left. "Prince Big Bone" blood. ALLAN MORTON, Ashville, N. Y.

PURE BRED DUROC SERVICE BOARS and Bred Gilts. F. B. GARNSEY, Clayton, N. Y.

RAW FURS AND TRAPPERY

WE SOLICIT LARGE AND SMALL country consignments of beef, horse hides and kindred lines. Prompt and fair returns. Write for tags. PENNSYLVANIA HIDE & LEATHER COMPANY, Scranton, Pa.

SELLING SILVER FOXES—\$5 monthly. SILVERBAR ASSOCIATION, 143E, Dracont, Mass.

CATTLE

BULL CALF—15 Registered, short horns. Will exchange for Guernseys. ALEX. FISHER, Madrid, N. Y.

Make Certain It Is Safe

Financial Department:—What do you think of the Clarence Hodson Company, 135 Broadway, New York City, Beneficial Loan Bond? Would you think them a safe investment?—(N. W., New York).

The main difficulty with the Beneficial Loan Bonds is their lack of a market which might be serious in case you needed sometime to realize on your investment. The business of the company is the making of small loans which so far has proved profitable but the return offered is so high that we cannot class the investment as conservative.

LOOKS REASONABLY GOOD; MAY LACK READY MARKET

Financial Department:—What is your opinion of the Berkshire Hills Paper Company (circular attached)? I would also like an opinion on the G. L. Miller Bond & Mortgage Co. of Miami, Fla.?—D. D. W., New York.

The Berkshire Hills Paper bonds, circular of which you enclose, look reasonably good although you must remember that a small local issue like this generally lacks a ready market. That may not be an objection in your case. As to the G. L. Miller bonds, it is very difficult to give advice regarding these real estate mortgage secured bonds and similar offerings. Except in the case where the mortgage certificate is guaranteed the security is always only the real estate on which the mortgage bond or mortgage certificate is a direct or collateral lien. Now, it must be obvious that some mortgages are better secured than others. Properly to appraise their investment status requires advice from a local real estate

DOGS AND PET STOCK

THOROUGHbred WELSH AND ENGLISH SHEPHERDS, intelligence and beauty unsurpassed. Shepherds without equal born with the herding instinct, pups can be trained in six months. GEO. BOORMAN, Marathon, N. Y.

SABLE AND WHITE SCOTCH COLLIE PUPPIES. JOHN D. SMITH, Walton, N. Y.

FLEMISH GIANT RABBITS, Exclusively. T. A. WILSON, Marion, N. Y.

COLLIE PUPS PAINE'S KENNELS, South Royalton, Vt.

AGENTS WANTED

AGENTS WANTED—Agents make a dollar an hour. Sell Mendets, a patent patch for instant mending leaks in all utensils. Sample package free. COLLETTE MFG. CO., Dept. 140, Amsterdam, N. Y.

AGENTS—Our soap and Toilet article plan is a wonder. Get our free sample case offer. HO-RO-CO., 177 Locust St., St. Louis, Mo.

STANCHIONS

CRUMB'S STANCHIONS are guaranteed to please the purchaser. They are shipped subject to trial in the buyer's stable. They are right. Send for booklet. WALLACE B. CRUMB, Box A, Forrestville, Conn.

MISCELLANEOUS

SELECT CHESAPEAKE BAY OYSTERS. Yes Sir, I'm here again "with the goods". SAY! They're GREAT—Fat, plump. Strictly fresh and delicious (melt in your mouth) O BOY! "Buy direct and save the difference." \$2.50 gal. prepaid. Special price on 5 gal. lots. WM. LORD, Cambridge, Md.

WANTED—1,000 nice thrifty chestnut Poles 1½ to 2 inch at butt end. What can you furnish for quick cash. JOSEPH ROGERS, JR. & SON, Farmingdale, Mommouth Co., N. J.

BEST PRINTING. LEAST MONEY—Grange programs, farm stationery, syrup labels, butter paper. Give requirements. Free samples. HONESTY FARM PRESS, Putney, Vermont.

LATEST STYLE SANITARY MILK TICKETS save money and time. Free delivery. Send for samples. TRAVERS BROTHERS, Dept. A, Gardner, Mass.

NAME YOUR FARM—And use Printed Stationery. 100 Letterheads and 100 Envelopes \$1.50. HICKSVILLE PRINTING CO., Hicksville, Ohio.

ALFALFA, mixed and timothy hay. Have seven cars, shipped subject inspection. W. A. WITHROW, Route Four, Syracuse, New York.

FERRETS—Get our free booklet and pre-war prices on sound healthy Ferrets. W. A. JEWETT & SONS, Rochester, O.

BEST EXTENSION LADDERS made 23 cents per foot. Freight paid. A. L. FERRIS, Interlaken, N. Y.

MILK TICKETS a specialty. Samples free. BONDS PRESS, Middletown, N. Y.

SUITABLE FOR THOSE ABLE TO TAKE RISKS

Financial Department:—I would like your advice whether the bonds of the Carbery & Reed Company are a safe investment? They are paying 10 per cent.—(M. A. S., New York).

We cannot undertake to recommend any bond coupon, rate of which is as high as 10 per cent. A corporation which has to borrow at this exorbitant interest not only handicaps itself but advertises its inability to get accommodation at the market rate. It is only fair to add that the company's balance sheet makes a good impression. Still it is not an investment suitable except for those able to take the risk.

LEAVE IT ALONE

Financial Department:—Will you kindly advise me if the Vogt Farm Meat Products Company of Royalton, Pa., with offices in the Berkeley Building, 106 N. Second Street, Harrisburg, Pa., is a safe investment and if they are doing any business?—H. L. L., Pennsylvania.

As far as we are able to find out, the Vogt Farm Meat Products Company has not begun production yet. We strongly advise you to leave the stock alone. At the best, in our opinion, it is a very doubtful speculation.

The Simplicity of Radio

And How to Make a Simple Crystal Set

This is the second of the radio series by Brainard Foote. Readers interested in radio should keep every issue of American Agriculturist on file, for there will be times when instructions in making the radio will refer to past numbers. Unless you have these back numbers, you will be at a loss to understand what Mr. Foote is saying. This is also true with the construction diagrams. They are not only valuable for the diagram, but each early diagram carries the schematic symbols of the various parts of the radio.

FOR those situated within 20 miles of a broadcasting station, this is both a "How-to-make it" article and a discussion of the principles of radio receiving. Readers having no station within this distance should look upon it as theory alone, for receiving sets capable of covering greater distances differ from the simple outfit illustrated this week only in the type of detector used. No "crystal" set will reliably cover more than about 20 miles, despite far greater claims by some manufacturers, and for this reason the construction of a "crystal" set for longer distance is really wasted effort.

Radio impulses proceed from the aerial of a broadcasting station in the form of waves. Sound waves are vibrations of the air, and therefore there can be no sound in a vacuum. Waves of light and of radio, however, pass through a vacuum without the slightest difficulty. Radio waves can also pass through the earth, through solid walls, and in fact can go almost anywhere. It

duced in a wire if a magnet is moved past it. The magnet is surrounded by its magnetic field, which makes itself evident by its pulling action on a piece of iron. Radio waves are similar to a magnetic field, although they are moving at a very rapid rate. As the wave snaps past the aerial wire of a receiving set it induces in the wire an electric pressure, first in one direction, and then in the other as the wave moves up and then down.

Comparing It to the Violin

A violin string is most useful here for purposes of comparison. The length of a radio wave is determined by characteristics of the sending aerial and internal apparatus connected with it, much the same as the pitch of a sound wave set up by a vibrating violin string is controlled by the string's physical properties. The violin string possesses inertia or resistance to change of motion due to its weight, and elasticity. The aerial system, which includes the aerial wires, the ground connections and any coils of wire intervening between the two, possesses similar characteristics. It has inductance, or inertia, and it has capacity, or elasticity. An aerial with a large amount of inductance and a large amount of capacity sets up a long wave length. Inductance is determined by the length and height of the aerial, while capacity

Diagram of Simple Crystal Set, Save this for Future Use

is impossible to imagine a wave without picturing at the same time some substance or medium that is vibrating. Thus a water wave is a vibration of the water. A stone is dropped into a pond, and ripples spread forth in all directions.

The "Ether" Theory in Radio

Scientists have set up the "ether" theory to explain radio and light waves. The "ether" is an all-pervading medium or substance whose particles are so minute that they fill the "chinks" in all other known materials. When a man walks along the street the ether pours through his body as water pours through a sieve. The ether is conceived to fill the universe and to bring us the light from sun, moon and stars.

In summary, then, currents in the transmitting aerial are the "stone" which causes the "splash" in the ether "pond." The waves spread out in every direction, travelling 186,000 miles each second as in the case of waves of light, the waves being high at first, but gradually becoming smaller as the distance from the origin increases. The waves are definite in length, although their height varies according to the strength of the current in the sending aerial. Wave lengths are measured in meters. When it is stated that a station's wave length is 360 meters, it means that from the top of one wave sent from that station to the top of the next wave measures exactly 360 meters, or about 1,300 feet.

Those who have dabbled in electricity know that an electric pressure, is in-

depends upon the area of the aerial and its nearness to the earth. A single wire aerial, high up, is low in capacity, while an aerial with five or six wires, has a higher capacity, especially if it is near the ground.

It is common knowledge that a string on one violin will be brought into vibration if a string on another violin not far away is tuned to the same pitch and plucked or bowed. The sound waves from the second violin impinge upon the string in just the correct sympathetic recurrence until the second string is pushed and pulled into vibration in the same way that a boat on the ocean may be rocked by steadily recurring waves of water. Where the electrical conditions of the receiving aerial are in a similar state of "sympathy" with a passing radio wave, the aerial is set into electrical vibration and currents are induced in the aerial, changing direction rapidly in unison with the passing wave.

How the Radio is "Tuned"

Of course it would be very inconvenient were it necessary to change the size of the aerial every time one wanted to receive a different wave length. To obviate this difficulty, the aerial is made smaller than required, and a coil connected between the aerial and the ground. Fig. 1 shows a common method of accomplishing this. By moving the contact lever back and forth, more or less of the coil of wire is introduced into the aerial system, and various wave lengths may be picked up. Vary-

82¢

Buys All the Wall Paper for An Entire Room

Here is a big Montgomery Ward offer! A DOUBLE LENGTH roll of wall paper for only 6c. Enough to paper an entire room 10x12 for as little as 82¢! This includes side wall, border and ceiling paper.

Send for our new book of Wall Paper Samples and see the MANY OTHER big values we have ready for you. It shows you our complete new assortment—grass-cloths, tapestries, oatmeal papers, leather patterns, fabrics. And all at prices to suit your pocketbook. Among the better grades, we have a big variety for only 50c and up per DOUBLE LENGTH roll. And remember, you get twice as much wall paper in one of our 16-yard DOUBLE LENGTH rolls as in the ordinary 8-yard single roll.

This Wall Paper Book FREE

Contains over 100 Actual Samples

Be sure to get a copy of this book before planning your Spring decorating. It is made up of actual large-sized samples. With each side wall is shown a sample of the border to match. Easy and pleasant to select your wall paper this way.

Send for this interesting and valuable book today. Ask for Wall Paper Sample Book, No. 1923-O. Address our House nearest you.

Montgomery Ward & Co.

CHICAGO FORT WORTH KANSAS CITY PORTLAND ORE. SAINT PAUL

Complete long range radio set

Ready to use at once \$119.99
in your home—no extras

EVERY reader of the *American Agriculturist* now has the opportunity to purchase this powerful, long range radio set completely assembled and ready to set up. This set will enable you to hear music, concerts, news, weather reports, sermons, sports results and time signals from New York, Newark, Boston, Schenectady, Buffalo and Rochester day and night with perfect clearness. Families in New York, New Jersey and Pennsylvania are also able to hear Pittsburgh, Chicago and Havana, Cuba.

Reliable—and low priced

THIS Radiocraft Radiophone Set is registered and licensed under the famous Armstrong patents. It is manufactured by one of the three largest makers of radio sets in the world. Because of purchasing in large quantities this company is able to offer it complete to the last detail for \$119.99.

Price includes everything

UNLIKE ordinary sets which require large additional purchases this set is shipped to you by express complete to the last detail with the highest quality equipment including:

- (1) Radiocraft Regenerative Radiophone Set Type D-4
- (1) Radiocraft Two Step Amplifier Type D-5
- (1) UV 200 Tube
- (2) UV 201 Tubes
- (1) USL 6 volt 80 hr. Storage Battery
- (3) Ever-ready Dry Batteries (22½ volts)
- (1) Western Electric Head Set
- (1) Stromberg-Carlson Plug
- (1) Copperweld Antenna Outfit (including 2 insulators, 1 porcelain tube, 100 ft. Copperweld wire, 50 feet lead—in wire, 25 feet ground wire and 1 ground clamp).

INSTRUCTIONS showing exactly how to set up antenna and make connections are furnished with set. The set can be used the very first night you get it. Use the coupon below to secure prompt shipment. We guarantee satisfaction or money back.

THE RICHARDS-HAMILTON COMPANY
997 BROADWAY, BROOKLYN, NEW YORK

I enclose (check)—(money order)—(draft) for \$30 for radio set described in *American Agriculturist*, I will pay balance of purchase price of \$119.99 to the expressman. I understand that you guarantee satisfactory operation or money refunded.

The Valley of the Giants—By Peter B. Kyne

BRYCE CARDIGAN, single-handed, almost bankrupt, his blind father, once king of the redwood country, now hopelessly discouraged, faces the unscrupulous Colonel Seth Pennington in a struggle for supremacy. The Valley of the Giants, where Bryce's mother lies buried, has been despoiled for a fine tree; Bryce avenges it by a fight with Rondeau, the Colonel's woods-boss, but Pennington, infuriated, set a crew of twenty upon him.

Shirley Summer, the Colonel's niece, impetuously calls after Bryce to warn him, thereby breaking her vow, "I'll never speak to you again." Bryce escapes the ambush and reaches his own woods where he looks for McTavish, the old boss, now usually drunk. Moira McTavish seeks to protect her father.

SO delightful a picture did Moira McTavish make that Bryce forgot all his troubles. "By the gods, Moira," he declared earnestly, "you're a peach! When I saw you last, you were awkward and leggy, like a colt. And now you're the most ravishing young lady in seventeen counties. By jingo, Moira, you're a stunner and no mistake. Are you married?"

She shook her head, blushing pleasantly at his unpolished but sincere compliments. "What? Not married. Why, what can be the matter with the eligible young fellows hereabouts?"

"There aren't any eligible young fellows hereabouts, Mr. Bryce. And I've lived in these woods all my life."

"That's why you haven't been discovered."

"And I don't intend to marry a lumberjack and continue to live in these woods," she went on, as if she found pleasure in announcing her rebellion. Despite her defiance, however, there was a note of resignation in her voice.

"You don't know a thing about it, Moira. Some bright day your *Prince Charming* will come by, riding the log-train."

"How do you know Mr. Bryce?"

He laughed. "I read about it in a book."

"Are you lonely, Moira?"

She nodded.

"Poor Moira!" he murmured absently.

The thought that he so readily understood touched her; a glint of tears was in her sad eyes. He saw them and placed his arm fraternally around her shoulders. "Tut-tut, Moira! Don't cry," he soothed her. "I understand perfectly, and of course we'll have to do something about it. You're too fine for this." With a sweep of his hand he indicated the camp. "Sit down on the steps, Moira, and we'll talk it over. I really called to see your father, but I guess I don't want to see him after all—if he's sick."

She looked at him bravely. "I didn't know you at first, Mr. Bryce. I fibbed. Father isn't sick. He's drunk."

"I thought so when I saw the loading-crew taking it easy at the log-landing. I'm terribly sorry."

"I loathe it—and I cannot leave it," she burst out vehemently. "I'm chained to my degradation. I dream dreams, and they'll never come true. I—I—oh, Mr. Bryce, I'm so unhappy."

"So am I," he retorted. "We all get our dose of it, you know, and just at present I'm having an extra helping, it seems. I'm sorry about your father. He's been with us a long time, and my father told me the other night that he has discharged Mac fourteen times during the past ten years, but to date he hasn't been able to make it stick. For all his sixty years, Moira, your confounded parent can still manhandle any man on the pay-roll, and as fast as Dad put in a new woods-boss old Mac drove him off the job."

"I know," said Moira wearily. "Nobody wants to be Cardigan's woods-boss and have to fight my father to hold his job. I realize what a nuisance he has become."

BRYCE chuckled. "I asked Father why he didn't stand pat and let Mac work for nothing. My father was under no obligation to pay him. Dad might have starved your father out, but the trouble was that old Mac would promise reform and end up by borrowing a couple of hundred dollars, and then Dad had to hire him to get it back! Of course the matter simmers down to this: Dad is so fond of your father that he just hasn't got the moral courage, and now the job is up to me. Moira, I'm not going to beat about the bush with you. They tell me your father is a hopeless inebriate."

"I'm afraid he is, Mr. Bryce."

"How long has he been drinking to excess?"

"About ten years, I think. Of course, he would always take a few drinks with the men around pay-day, but after Mother died, he began taking his drinks between. Then he took to going down to Sequoia on Saturday nights and coming back on the mad-train, the maddest of the lot. I suppose he was lonely, too. He didn't get real bad, however, till about two years ago."

"Just about the time my father's eyes began to fail and he ceased coming to jack Mac up? So he let the brakes go and started to coast, and now he's reached the bottom! I couldn't get him on the telephone to-day or yes-

terday. I suppose he was down in Arcata, liquoring up."

She nodded miserably.

"Well, we have to get logs to the mill, and we can't get them with old John Barleycorn for a woods-boss, Moira. So we're going to change woods-bosses, and the new one will not be driven off the job, because I'm going to stay up here a couple of weeks and break him in myself. By the way, is Mac ugly in his cups?"

"Thank God, no," she answered fervently. "Drunk or sober, he has never said an unkind word to me."

"But how do you manage to get money to clothe yourself? Sinclair tells me Mac needs every cent of his two hundred and fifty dollars a month to enjoy himself."

"I used to steal from him," the girl admitted. "Then I grew ashamed, and for the past six months I've been earning my own living. Mr. Sinclair gave me a job waiting on table in the camp dining room. You see, I couldn't leave my father. He had to have somebody to take care of him."

"Sinclair is a fuzzy old fool," Bryce declared with emphasis. "The idea of our woods-boss's daughter slinging hash to lumberjacks. Poor Moira!"

HE took one of her hands in his, noting the callous spots on the plump palm, the thick finger-joints that hinted so of toil. "Do you remember when I was a boy, Moira, how I used to come up to the logging-camps to hunt and fish? I always lived with the McTavishes then. Poor Moira! Why, we're old pals, and I'll be shot if I'm going to see you suffer."

She glanced at him shyly, with beam-ing eyes. "You haven't changed a bit, Mr. Bryce."

"Let's talk about you, Moira. You went to school in Sequoia, didn't you?"

"Yes I was, graduated from the high school there. I used to ride the log-trains into town and back again."

"Good news! Listen, Moira. I'm going to fire your father, as I've said. I really ought to pension him, but I'll be hanged if we can afford pensions any more—particularly to keep a man in booze; so the best our old woods-boss gets from me is this shanty, and a perpetual meal-ticket for our camp dining room while the Cardigans remain in business."

"Perhaps," she suggested sadly, "you had better talk the matter over with him."

"No, I'd rather not. I'm fond of your father, Moira. He was a man when I saw him last—such a man as these woods will never see again—and I don't want to see him again until he's cold sober. I'll write him a letter. As for you, Moira, you're fired, too. I'll not have you waiting on table—not by a jugful! You're to come down to Sequoia and go to work in our office. We can use you on the books, helping Sinclair. I'll pay you a hundred dollars a month, Moira. Can you get along on that?"

Her hard hand closed over his tightly, but she did not speak.

"All right, Moira. It's a go, then. Hills and timber—timber and hills—and I'm going to set you free. Perhaps in Sequoia you'll find your *Prince Charming*. There, there, girl, don't cry. We Cardigans had twenty-five years of faithful service from Donald McTavish before he commenced slipping; after all, we owe him something, I think."

She drew his hand suddenly to her lips and kissed it; but her heart was too full for mere words.

"Fiddle-de-dee, Moira! Buck up," he protested, pleased, but embarrassed withal. "If you'll just cease shedding the scalding and listen to me, I'll tell you what I'll do. I'll advance you two months' salary for—well, you'll need a lot of clothes and things in Sequoia that you don't need here. Poor old Mac! I'm sorry I can't bear with him, but we simply have to have the logs, you know."

HE rose, stooped, and pinched her ear; for had he not known her since childhood, and had they not gathered huckleberries together in the long ago? She was sister to him—just another one of his problems—and nothing more. "Report on the job as soon as possible, Moira," he called to her from the gate. Then the gate banged behind him, and with a smile and a debonair wave of his hand, he was striding down the little camp street where the dogs and the children played in the dust.

After a while Moira walked to the gate and leaning upon it, looked down the street toward the log-landing where Bryce was ragging the laggard crew into something like their old-time speed. Presently the locomotive backed in and coupled to the log train, and when she saw Bryce leap aboard, seat himself on a top log in such a position that he could not fail to see her at the gate, she waved to him. He threw her a careless kiss, and the train pulled out.

When Moira lifted her Madonna glance to the frieze of timber on the skyline, there was a new glory in her eyes; for over that hill *Prince Charming* had come to her, and life was all crimson and gold!

When the train loaded with Cardigan logs stopped at the log-landing in Pennington's camp, the locomotive uncoupled and backed in on the siding for the purpose of kicking the caboose, in which Shirley and Colonel Pennington had ridden to the woods, out onto the main line again—where, owing to a slight downhill grade, the caboose, controlled by the brakeman, could coast gently forward and be hooked on to the end of the log-train for the return journey.

Throughout the afternoon Shirley, following the battle royal, had sat dismally in the caboose. She was prey to many conflicting emotions; but had to a great extent recovered her customary poise—and was busily speculating on the rapidity with which she could leave Sequoia and forget she had ever met Bryce Cardigan—when the log-train rumbled into the landing and the last of the long string of trucks came to a stop directly opposite the caboose.

SHIRLEY happened to be looking through the grimy window at that moment. On the top log, the object of her speculations was seated, apparently quite oblivious of the fact that he was back in the haunt of his enemies, although knowledge that the double-bitted axe he had so unceremoniously borrowed was driven deep into the log beside him, probably had much to do with Bryce's air of indifference. He was sitting with his elbows on his knees, his chin in his cupped hands, the while he stared moodily at his feet.

Shirley suspected she knew what he was thinking; he was less than six feet from her, and a morbid fascination moved her to remain at the window and watch the play of emotions over his strong, stern face. She told herself that should he show the slightest disposition to raise his head she would dodge away in time to escape his scrutiny.

She reckoned without the engine. With a smart bump it struck the ca-

boose and shunted it briskly up the siding; at the impact Bryce raised his troubled glance just in time to see Shirley yielding to the shock, sway into full view at the window.

With difficulty he suppressed a grin. "I'll bet my soul she was peeking at me," he soliloquized. "Confound the luck! Another meeting this afternoon would be embarrassing." Tactfully he resumed his study of his feet, not even looking up when the caboose, after gaining the main track, slid gently down the slight grade and was coupled to the rear logging-truck. Out of the tail of his eye he caught a glimpse of Colonel Pennington passing alongside the log-train and entering the caboose; he heard the engineer shout to the brakeman—who had ridden down from the head of the train to unlock the siding switch and couple the caboose—to hurry up, lock the switch, and get back aboard the engine.

"Can't get this danged key to turn in the lock," the brakeman shouted presently. "Lock's rusty, and something's gone bust inside."

Minutes passed. Bryce's abstraction became real, for he had many matters to occupy his busy brain. Presently he was subconsciously aware that the train was moving gently forward; almost immediately, it seemed to him, the long string of trucks had gathered their customary speed; and then suddenly it dawned upon Bryce that the train had started without a single jerk—and that it was gathering headway rapidly.

HE looked ahead—and his hair grew creepy at the roots. There was no locomotive attached to the train! It was running away down a two per cent grade, and because of the tremendous weight of the train, was gathering momentum at a fearful rate.

The reason for the runaway dawned on Bryce instantly. The road was, like most private logging-roads, neglected as to roadbed and rolling-stock; also it was undermanned, and the brakeman, who also acted as switchman, had failed to set the hand-brakes on the leading truck after the engineer had locked the air-brakes. As a result, during the five or six minutes required to "spot in" the caboose, and an extra minute or two lost while the brakeman struggled with the lock on the switch, the air had leaked away through the worn valves and rubber tubing, and the brakes had been released—so that the train, without warning, had quietly and almost noiselessly slid out of the log-landing and started on its mad career. Before the engineer could beat it to the other switch with the locomotive, run out on the main track, let the runaway gradually catch up with him and hold it—no matter how or what happened to him or his engine—the first logging-truck had cleared the switch and blocked pursuit. There was nothing to do now save watch the wild runaway and pray, for of all the mad runaways in a mad world, a loaded logging-train is by far the worst.

For an instant, Bryce Cardigan was tempted to jump and take his chance on a few broken bones, before the train could reach a greater speed. His next impulse was to run forward and set the hand-brake on the leading truck, but a glance showed him that even with the train standing still he could not hope to leap from truck to truck and land on the round, freshly peeled surface of the logs without slipping. And to slip now meant swift and horrible death.

Then he remembered. In the wildly rolling caboose Shirley Summer rode with her uncle, while less than two miles ahead, the track swung in a sharp curve high up the hillside above Mad River. Bryce knew the leading truck would never take that curve at high speed, but would shoot off at a tangent into the cañon, carrying trucks, logs, and caboose with it.

"The caboose must be cut out of this runaway," Bryce soliloquized, "and it must be cut out in a hurry. Here goes nothing in particular, and may God be good to my dear old man."

He jerked his axe out of the log, drove it deep into the top log toward

(Continued on page 59)

The Simplicity of Radio

(Continued from page 57)

ing the number of turns on the coil is known as "tuning" and means a change in the inductance of the aerial system.

Few Parts Need Be Purchased for Crystal Set

Few parts need be purchased for so simple an outfit as given in Figure 1. A half-pound coil of No. 20 enamelled magnet wire will be sufficient for the coil. For connections and incidentals, a half-pound of No. 18 bell wire should be purchased. Then there are needed five binding posts, one small brass angle, a strip of brass about four inches long and an inch wide, two small rubber composition knobs with threaded bushings for an 8-32 screw and a cardboard tube about 3½ or 4 inches in diameter and 4 inches long. An oatmeal or salt box fills the bill exactly. Figure 1 is self-explanatory as regards

over, the antenna is in reality a true protection to the house, as much as lightning rods are a protection to the barn. Small static changes will leak off and may sometimes be heard crackling through the lightning arrester during a thunderstorm. This prevents the accumulation of a heavy and dangerous charge of electricity over the house.

Obtaining a Good Ground Connection

Sometimes it is difficult to obtain a good ground connection on a farm where the house is not piped. In that case, good results may be obtained in several ways. If there is a fairly long chicken wire or barbed wire fence near the house, the ground wire from the lightning arrester may be attached to this. Outside piping connected to the well is very satisfactory for this purpose. In the absence of any of these

Diagram of Arrangement for Bringing Aerial Indoors

the arrangement of the parts on a wooden base, and the connections. The insulation is removed where contact is made, as indicated. Two and one-half inches of the tube are wound tightly with the enamelled wire, securing each end in a small hole with one or two twists. The brass strip is cut in half lengthwise, and one strip is cut and bent to form the tuning arm and mounted in front of the coil. The latter is fastened down to the base with the aid of a wood screw and washer at each end. One rubber knob is mounted to form the handle of the tuning arm or "slider" and an arc traced upon the wire by the rounded end. Sandpaper is then brought to use in cleaning the surface of the wire so that the slider may make contact with one end to the other, care being taken to brush out small copper particles from between the turns.

Making the "Cat-Whisker" Detector

A spring clip for the crystal is bent from the other brass piece and held in place by a screw. A piece of the enamelled wire is scraped clean and sharpened at the end by a sideways cut with a pair of shears to form the "cat-whisker" of the detector. Good mounted crystals may be purchased for 35 or 50 cents, and should be handled so that the fingers do not come in contact with the mineral itself. Natural oil from the hands soon destroys the sensitivity of a detector crystal, although it may be cleaned if necessary with wood alcohol and a clean cloth. The phone condenser appears in various forms, and any condenser stamped with a capacity of about .001 is suitable. A brass machine screw, 8-32 in size, is employed to support the cat-whisker, the other rubber knob screwed on as a handle.

Figure 2 shows the antenna, lead-in wire and ground. The lightning arrester is required, and may be mounted upon the window frame or on a board near the window. When this is properly installed and the set connected, the agent of the fire insurance company holding the policy on the house should be notified. He will then either inspect the installation himself or have it inspected, and a notation will be made upon the fire insurance policy granting permission for the radio outfit. There is no change in the premium rate when a radio is properly installed. More-

possibilities, a piece of insulated wire, about No. 14 or 16, and just as long as the aerial wire, may be run out directly under the aerial, lying directly on the ground. Where it is necessary to use an outside ground, an additional porcelain tube should be inserted to conduct the wire outside. If it is not desired to drill holes in the window frame, the tubing may be placed in a narrow board which will fit the window frame and upon which the sash may be closed. Some care is needed in the selection of the headphones. A pair of phones having fair sensitivity may be purchased for about \$5.00. Since the phones will be used later on in better receiving equipment, however, it is wise to pay enough more to insure long life and maximum response. Therefore, it is well to pay about \$8.00 for the telephone receivers. If there is no radio supply store nearby, recourse may be had to the mail order firms, practically all of whom carry reliable radio apparatus of every description.

Interpreting the Schematic Diagram

Beneath the pictorial sketch is the schematic diagram as used in most radio "hook-ups." The beginner should commence at once to correlate the two forms of diagrams, comparing the actual instruments with their schematic symbols which will be used later on in

(Continued on page 63)

The Valley of the Giants

(Continued from page 58)

the end, and by using the haft to cling to, crawled toward the rear of the load and looked down at the caboose coupling. The top log was a sixteen-foot butt; the two bottom logs were eighteen footers. With a silent prayer of thanks to Providence, Bryce slid down to the landing thus formed. He was still five feet above the coupling, however; but by leaning over the swaying, bumping edge and swinging the axe with one hand, he managed to cut through the rubber hose on the air connection. "The blamed thing might hold and drag the caboose after I've pulled out the coupling-pin," he reflected. "And I can't afford to take chances now."

\$1,000.00 INSURANCE FOR 50 CENTS

As a part of our broad policy of service to readers, we now offer you a \$1,000 Travel Accident Policy for one year with a three-year subscription for AMERICAN AGRICULTURIST all for only \$2.50—just 50c more than our special price for a three-year subscription alone.

You may be Hurt or Killed in a Train or Auto Accident Tomorrow

This Tells You What the Policy Will Pay

Read the Following Protection given to A. A. Readers by the North American Accident Insurance Co. of Chicago. Read, then Cut the Coupon and Mail It.

This Company will pay the following amounts, subject to the terms of the policy, for death or disability on a public carrier, due to its wrecking or disablement while the insured is riding as a fare-paying passenger, or due to the wrecking or disablement of any private horse-drawn or motor-driven vehicle on which insured may be riding or driving, or by being thrown therefrom.

Life	One Thousand Dollars (\$1,000.00)
Both Hands	One Thousand Dollars (\$1,000.00)
Both Feet	One Thousand Dollars (\$1,000.00)
Sight of Both Eyes	One Thousand Dollars (\$1,000.00)
One Hand and One Foot	One Thousand Dollars (\$1,000.00)
Either Hand and Sight of One Eye	One Thousand Dollars (\$1,000.00)
Either Foot and Sight of One Eye	One Thousand Dollars (\$1,000.00)
Either Hand	Five Hundred Dollars (\$500.00)
Either Foot	Five Hundred Dollars (\$500.00)
Sight of Either Eye	Five Hundred Dollars (\$500.00)
Total Disability, 13 weeks or less, Ten Dollars (\$10.00) per week	
Life, by being struck, knocked down or run over by vehicle, while standing or walking on public highway	
Two Hundred and Fifty Dollars (\$250.00)	

The above indemnities will be paid, subject to the provisions and conditions of the policy. A complete numbered and registered policy will be supplied each person insured. Be sure to read it before filing away.

This Travel and Pedestrian Accident Insurance will protect every registered subscriber of American Agriculturist who pays a 50 cent fee at the same time he pays \$2.00 for a three-year subscription for American Agriculturist.

Don't make the mistake of neglecting your family's financial welfare in case the unexpected accident comes to you. Is not your own peace of mind worth the small amount of our accident policy? You need protection. Tomorrow may be too late. Order one of these policies today.

THE BIGGEST VALUE IN THE WORLD

NEW LAMP BURNS 94% AIR Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, R. M. Johnson, 642 N. Broad St., Philadelphia, Pa., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make \$250 to \$500 per month.

ORIENTAL DESIGN TAPESTRY RUGS

2 Rugs \$2.98

SEND NO MONEY

Woven specially for us. Will last twice as long as the average rug. Look exactly like rugs selling for \$6.00 up. Large 64x22 size. Just the thing to place in front of your bureau, piano, etc. Warm, cheery colors. Rich Oriental designs. Our customers order more. Wonderful money-saving offer. Rush your order today. Ask for bargain 637.

SEND NO MONEY

Just rush your name and address. Rugs shipped by return mail. Pay postman only \$1.00 and few cents postage on arrival. We guarantee satisfaction or money back. Send for FREE bulletin of CROWN SALES COMPANY.

Aunt Janet Talks of Good Resolutions And Advises Her Nieces to Make the Sort They Can Keep

HAPPY New Year, nieces all! Aunt Janet has been hearing from many of you and writing to you too, but it's some time since she found a corner in these busy Household Pages from which she could speak to you all at once! New Year's however—a whole twelve months lying before us, waiting for us to make or mar—New Year's deserves a special letter.

I've been thinking a lot about it too, for just the other day a very dear little niece of mine, with a dear little home and a sheaf of babies that any one would be proud to cuddle, came dragging into my door with such a woe-begone look that I almost laughed—but of course that wouldn't have been polite. So I just put my arms around her and asked her what terrible calamity had happened.

"Oh Aunt Janet," she said, "It's just me." (I'm not responsible for her grammar—she was too discouraged to care!)

"Well," I said, "that's something off my mind. I thought at least that Jim had fallen into the well and the house had burned down with all the babies in it and the brand new airedale you got for Christmas!"

She laughed a little and assured me that the family was extremely well, especially considering the amount of Christmas candy that had gone down several little red lanes. Then she went off—or so it seemed—on a tangent.

"Aunt Janet," she said, "Do you believe in New Year's resolutions?"

Aunt Janet just waited and this is what she heard:

"I don't. You make them, and feel all right and happy inside and then you forget or break them—and it's so humiliating that you wish you'd never made any. They hurt lots more than they help—at least mine do. I feel so defeated and worthless when I don't keep one, that I give up in despair and don't even come as near to living up to it as I might have if I'd never set myself a definite goal."

"As for instance?"

"Oh, it's just a little one I made about housekeeping. You know, untidiness is my besetting sin. So I resolved this year I'd keep a tidy kitchen—and the rest of the house too—no matter what happened. Result—I've kept it a week; the kitchen's all right, but I've snapped Jim's head off twice and he looks so grieved and surprised; and I was cross with Anne-baby and she is such a lamb, and I hustled Jimmie Junior out of the front room and he hadn't really any other place to play, and my temper's edgy and—and—oh, I don't care now if the house never is orderly again if I can only have my family stop tip-toeing around with that awful scared look on their faces! But I can't break a resolution and feel that I've any real backbone, can I, Aunt Janet?"

It took a good deal of comforting and wheedling and a nip of salt in the shape of some good advice—to say nothing of two nice hot cups of tea—to send her away, her usual sunny self. But she finally trotted off quite cheerfully and left the impression that a special bit of baking was to be undertaken as a supper surprise. Even if she had to overlook some toys in the corner and even—yes—some unwashed dishes in the sink.

After my distressed little caller was gone, I looked into the fire for quite a while thinking about her question—does it pay to make good resolutions? We know we won't keep them—isn't it worse to make and break them, than never to make them at all? But finally I cast my vote in favor of the good resolutions.

What is a "Good" Resolution?

But there's one thing; that word *good*. First be sure your resolution is good, then go ahead. Not merely virtuous—a virtuous resolution can be very trying to others as well as to the person who makes them. By "good" I mean sensible, middle-of-the-road, keepable resolutions—with perhaps just the least bit of aspiration to them to stimulate without discouraging.

As I told my little neighbor, resolutions have two objects—one is the keeping of the resolution itself, the other is the effect of the discipline upon its

author. If you make a resolution so hard to keep, that it destroys your temper and makes those around you miserable too, it's not a very good resolution. If, on the other hand, it's too easy to keep, you gain none of the real discipline which you meant to give yourself.

I remember reading about some famous English author (De Quincy, I think, though memories are undependable things) who told how, as a boy, he would run down a London street touching every paling of a fence as he ran. If he missed one and went on to the next street, he was filled with such a mute sense of defeat that he would finally have to go back and touch the one he had missed before he could absolve himself.

It is this silent judge within us, who, when resolutions are broken, is often so severe that, as my little friend said, it hurts us worse to make and break a resolution than never to make one at all. When we skip a paling in the fence we must pull up and go back, or hear him remind us all the rest of the day.

So in resolution making, don't set yourself the impossible. Don't say, "My house shall *always* be tidy," but say "I'll do my level best to keep my house tidy." Then, if you shirk, that inner voice will say "How about your 'level best?'" While if you honestly are too tired to do some extra bit of

cleaning, or cannot do it and still find time to run over to your sick neighbor's with a newly-made custard, you'll find your silent judge willing to admit that in slackening up a bit you may have "chosen the better thing."

New Year's resolutions like that can be kept from the first day to the last and the maker of the resolve will be better for having made and kept it. How about it, nieces and cousins and all the big family? Which resolutions, made last year did you keep; which did you break? And what one resolution has helped you the most of all you have ever made? Write Aunt Janet and tell her some of your experiences with this matter of once-a-year resolving, and whether you think it does or doesn't pay. I'll look forward to hearing your opinions.

Always your

Aunt Janet

"Tell Aunt Janet About It!" She is glad to be your confidant, to help wherever she can and will always regard your questions as entirely confidential. She will answer you personally, asking only that you send a stamped, self-addressed envelope if you wish a reply.

Have tried your patterns and find them O K. Also find the Agriculturist so much improved under the new management. Keep it up!—Mrs. W. H., New York.

JANUARY IS THE MONTH FOR HOME SEWING

No. 1295 (above) one-piece apron with straps buttoning at the back. No. 1295 cuts in sizes 36, 40, 44 and 48 inches bust measure. Size 36 requires 2 yards 36-inch material.

(Below) No. 1271. Boy's suspender suit with separate waist. No. 1271 cuts in sizes 2, 4, and 6 years. Size 4 requires 3/4 yards 36-inch material for trousers and 1 yard 36-inch material with 2 1/4 yards pleating for waist.

THE five patterns chosen this week by the Fashion Editor cover almost all the needs of the mid-winter sewing season. There is a housedress and an afternoon frock. There is also a school dress for the girl, and a smart little suit for the boy.

If you want help on any of your dressmaking questions, write the Fashion Editor about it, inclosing a stamped self-addressed envelope. She will be very glad to answer you promptly and may be able to suggest some solution which had not occurred to you.

No. 1351. A serviceable housedress with long or short sleeves. No. 1351 cuts in sizes 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3 3/4 yards 36-inch material with 1/2 yard 36-inch contrasting.

To Order: Write name and address clearly and inclose 12 cents for each pattern ordered. Mail order to Fashion Editor, American Agriculturist, 461-4th Ave., N. Y. C. Our Winter Book of Fashions is still available. It contains over 300 styles for all members of the family. 10 cents a copy.

(Above) No. 1143. Girl's school dress, jumper style with guimpe. No. 1143 cuts in sizes 4, 6, 8, 10, 12 and 14 years. Size 8 requires 1 1/4 yards and 1/4 yard 36-inch material contrasting for dress, and 1 1/4 yards 36-inch material for guimpe.

(Below) No. 1546, one-piece afternoon frock. No. 1546 cuts in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 yards 36-inch material.

Using a Fireless Cooker

Ada Carroll Wortman Tells Best Methods

THE fireless cooker has a firm place in the affections of the farm woman who aims to be not only a good housekeeper, but to plan her work so efficiently that she also has leisure for other things. This invention has done much to banish the "all-worn-out" woman who is a slave to the kitchen stove. While the necessity for saving fuel is not so urgent as in the city, economy of time and labor means much on the farm.

Bread sponge, mixed at night and set in the cooker, will hold the temperature at which it is placed in the box, and in the morning will be light as can be, thereby making the mixing of the bread a task which can be done the first thing after rising.

The cereal for the morning meal may be boiled on the stove for five minutes in the evening, then set in the cooker. In the morning it will be just hot.

main frozen for many hours. Whether hot or cold, anything placed in the cooker maintains the same temperature for from three to six hours.

Although a fireless cooker can be made at home, you must have the right disks to use. These can be obtained from mail order houses, and two are needed for each well.

A USEFUL LACE MOTIF

As soon as Christmas is over, the prudent housewife turns to the business of replenishing her own stock and getting her linen into good condition. The lace motif shown in the picture has a dozen uses. It is smart for pillowslips, towels, centerpieces, curtains and for clothing; it may be worked in fine linen thread or in a coarse material for large articles. The whirls may be made

A Pretty Lace Motif for Insertion or Edging

enough to taste good. If the cooker has two wells, or if the family is small, the coffee also may be made at night, drained from the dregs, and put into the cooker. It makes a quick breakfast to have coffee and cereal all ready before the fire is built in the range. All that will be needed in addition will be to cook eggs, or bacon, or toast, or griddle cakes, and breakfast is ready.

Spareribs, a roast of beef, a meat loaf, or a chicken will be done to a turn in the cooker in three hours, with no danger of scorching, or need of basting. The cooker must have disks of iron or soapstone in order to do roasting or baking, but all the modern cookers have. Brown bread, baked in pound coffee cans, bakes better in the cooker than in the oven. Heat the disks until they snap when a wet finger is applied, put one in the bottom of the cooker, and the cans of bread above, then lay the other disk over the cans, and in two hours your bread will be well done.

Stews of all kinds and legumes are better cooked in the fireless cooker than in any other way. If you have a rack which will protect pies, they also may be baked in the cooker. Set the pie on the heated lower stone, place the rack above the hot upper stone, and you will be surprised to see how delicately fine the texture of the crust will be, while the filling will be done, without boiling over.

Anything that can be cooked in the oven or boiled on the top of the range may be cooked in the cooker. Frying is not so successfully done, although it may be done with proper care. The good cook uses fried foods sparingly, and it is better to fry on the top of the stove if at all.

As you use the cooker, you will find more ways to utilize the principle on which it operates. Ice cream may be placed in the cold well, and it will re-

individually and used as inserts, or connected to form an edging.

A centerpiece and the end of a long table runner are shown in the picture.

Directions for making this lace will be sent upon receipt of 10 cents in stamps. Address your order to Handicraft Department and ask for E 6.

To Banish Onion Odor

An experienced cook says that if you put vinegar in a pan at the same time onions are cooked the odor will not be noticed in the kitchen while the onions are cooking. This might be worth trying with cabbage, too, as either of these odors prevent many onions and cabbage being cooked that otherwise would be added to regular meals.

When Driving a Nail into a plastered wall, first place the nail in hot water until thoroughly heated. You can then drive it in without breaking or chipping any of the surrounding plaster.—(Mrs. J. T., Massachusetts.)

Aspirin

Say "Bayer" and Insist!

Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer product prescribed by physicians over twenty-two years and proved safe by millions for

Colds	Headache
Toothache	Lumbago
Earache	Rheumatism
Neuralgia	Pain, Pain

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proper directions. Handy boxes of twelve tablets cost few cents. Drug-gists also sell bottles of 24 and 100. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.

Reviewing the Latest Eastern Markets and Prices

INDICATIONS ARE THAT FEED PRICES WILL NOT GO LOWER

AN official of one of the largest milling companies in the country stated this week in private conversation with the editor of this page that he saw no prospect for any lower prices on mixed feeds or protein concentrates in the next two months. The number of cattle on feed in the country now has increased about 27 per cent. The cotton crop is not over 50 per cent normal, and demand for cottonseed meal has increased, especially for use as fertilizer. Flax-seed production decreased this year and has been decreasing for several years.

The gluten supply is short, as production has been decreased. Distillers' grains are difficult to obtain. So, according to this official, there is a limited supply of protein ingredients, which is likely to result in holding up the price on such commodities during the remainder of the heavy-feeding season.

Greenings Still Dominate Apple Market

Western New York and Hudson Valley apples, consisting chiefly of Greenings, have been moving to the New York market in liberal quantity, which, together with heavy arrivals of Western boxed apples, contributed to a generally dull market. Barreled fancy red varieties, well colored, have been scarce. Good stock at Eastern markets has been in moderate demand, but ordinary sorts sold slowly in mid-January. As reported by the New York State Department of Farms and Markets, the total carlot shipment of apples this season to January 10 amounted to 81,214, as compared with 73,230 last year.

The following table shows the sale price per barrel at New York City in mid-January:

VARIETY	Best	Fancy	Ordinary
Greening.. \$4	@4.25	\$4.50@4.75	\$3.50@3.75
Baldwin..	4.50@4.75	5	4 @4.25
N. Spy....	6.50@7	7.25@7.50	5 @6
McIntosh..	8 @8.25	8.50@9	6.50@7
Ben Davis..	3 @8.25	@3.50	2.50@2.75

At Rochester, N. Y., A grade 2½-inch Baldwins sold f. o. b. at \$4 to \$4.50 per barrel.

Some activity was noticed in the British apple market. At Liverpool, Greenings went at \$4.90 per barrel, Ben Davis, \$5.25 to \$6.28.

Receipts of pears were comparatively light from the Hudson Valley and Western New York; demand also light, only very best grades moving at encouraging prices. Kieffers were the largest barreled offerings; even best stock moved at \$3 to \$3.50 per barrel, with very few sales reported as high as \$4.

Potato Buyers Continue to Be Cautious

The expected turn for the better on potatoes had not taken place by mid-January, country and city prices for the most part remaining irregular at former levels. The f. o. b. loading prices at up-State points for Green Mountain and similar varieties averaged close to 45 cents per bushel; some turn-over at 40 cents. These same potatoes wholesaled at New York City receiving terminals at \$1.15 to \$1.25 bulk in heated cars. The latter figure was secured only on frost-free, clean, attractive stock.

Long Island shipping points reported most sales at 90 to 96 cents per bushel f. o. b., or \$2.70 to \$2.90 per 180-pound sack. As laid down in New York City, this stock went at \$3.50 to \$3.65 per sack, full weight. In mid-January there was gossip among traders which indicated a better feeling, perhaps due to the belief that weather conditions would be more normal for the season and the winter trade would begin in earnest.

With few arrivals of white cabbage from up-State producing sections, the market ruled stronger for fancy stock; prices unchanged. Old-crop white cabbage was dull. Total shipments of both old and new-crop shipments to date are a fifth heavier than last year. White Danish, best, sold at New York at \$25 to \$26 per ton, bulk; fancy, in a small way, \$28 to \$30. Red Danish went at \$45 to \$50.

Mid-January saw little change in the onion market. Best No. 1 yellow onions

from New York State brought \$2.50 to \$2.60 per 100-pound sack; occasional sales on fancy up to \$2.65 to \$2.70, ordinary \$2 to \$2.50.

Butter Recovers on Firm Market

The butter market at New York nearly recovered the several cents drop which it experienced at the opening of the year; market firm. In fact, under moderate receipts even first and second grades worked out under a good demand. Highest score creamery salted butter sold at 54½ @ 55c per pound; extra 92-score, 53½ @ 54c; firsts to extra firsts, 47½ @ 53c; finest New York State dairy butter, salted, fine to fancy, 42 @ 51c; good to prime, 35 @ 41c; common to fair, 27 @ 34c. New arrivals of Danish butter still offer competition, arrivals of something over 5,000 casks going into the jobbing trade in mid-January.

The cheese market was firm, despite

picked fowls, five pounds and over, brought 29 @ 30c; four pounds, 28c; 3½ pounds, 22 @ 26c; scalded fowls, heavy, 23 @ 24c; roasting chickens, dry picked, four to six pounds and over, 34 @ 36c; 3½ pounds and under, 24 @ 30c.

Hay Market Dull, Alfalfa Steady

Market continued dull. Prices in mid-January were \$1 per ton less than in previous week. Basing quotations on the new U. S. grades, as quoted in detail in these columns in the issue of January 13, the following are the mid-January prices: U. S. timothy No. 1, \$25 per ton; No. 2, \$23; No. 3, \$21 @ 22. U. S. light clover mixed, No. 1, \$23 @ 24; No. 2, \$22 @ 23; No. 3, \$21 @ 22. U. S. medium clover, mixed, No. 1, \$24; No. 2, \$22 @ 23; No. 3, \$21 @ 22. U. S. heavy clover, mixed, No. 1, \$21 @ 23; No. 2, \$18 @ 20. Light grass, mixed, \$24 @ 25; heavy grass, mixed,

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold in the week ending January 13:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.
Hennery, whites, extra fancy.....	58@60
Extra first	53@55	51@52	47
Firsts	50@52	45
Gathered, whites, first to extra firsts.....	50@54
Lower grades	45@49
Hennery browns, extra fancy.....	52@54
Gathered browns and mixed colors, extra fancy.....	45@51	49@50
Extra first
Pullets.....	42@48	46@48
Butter (cents per pound)			
Creamery (salted) high score.....	55
Extra (92 score).....	53½@54	54@55
State dairy (salted), fine to fancy.....	42 @51	51@52
Good to prime.....	35 @41	43@50
Hay and Straw, Large Bales (per ton)			
Timothy No. 2	\$23@24	\$19@20	\$21 @22
Timothy No. 3	21@22	18 @20
U. S. Sample	15@18
Fancy light clover mixed	22@24	20 @21
Oat straw No. 1	12.50@13
Rye straw No. 1
Live Poultry, Express Lots (cents per lb.)			
Fowls, colored fancy, heavy.....	26@29	25@26	28@30
Fowls, leghorns, fancy, heavy.....	20@22	17@21	20@24
Chickens, colored, fancy, heavy.....	21@22	24@25	27@28

Live Stock (cents per pound)			
Calves, good to medium.....	9 @15½	14½
Bulls, common to good.....	5 @ 6½	3½ @ 5½
Lambs, common to good.....	12½ @16	7 @15½
Sheep, common to good ewes.....	4½ @ 7½	8½
Hogs, Yorkers	9½ @ 9¾	9¼ @ 9½

quiet tradings, particularly on fancy sorts, prices fractionally higher than earlier in the month. New York State whole-milk, held, flats, colored or white, sold at 28¾c per pound; average run, 27½ @ 28c; daisies, 27½ @ 28¼c; twins, 27½ @ 28¼c; Young America, 28 @ 28½c; New York State skims brought 21 @ 21½c; fancy Swiss cheese, 34 @ 35c.

Eggs Working Lower

Although not in direct competition, heavy arrivals of Pacific Coast eggs were to the disadvantage of nearby white and brown, the market continuing to work lower, but not as sharply as the first week in January, when the drop was as much as 5 to 7 cents per dozen on very best nearby henneries, and more on the firsts and lower grades. Buyers are cautious, anticipating fairly heavy arrivals of nearby grades, due to mild weather; prices correspondingly irregular.

Nearby hennery whites in new cases, flats and fillers, extra fancy, sold at 58 @ 60c per dozen; nearby hennery whites in other than new cases, extra fancy, 55 @ 57c. Brown eggs in corresponding grades ruled at 2 to 3 cents per dozen lower. Fancy New Jersey hennery white sold at 58 @ 60c per dozen.

Poultry in Fair Demand

Arrivals at New York of live poultry by freight were heavy in mid-January; express receipts light. Heavy, fat fowls and chickens met a reasonably good demand. Heavy colored fowls, plump, sold at 26 @ 29c per pound; Leghorns, light weights, 20 @ 22c; chickens, colored or white, 21 @ 22c; roosters, 13c.

Supplies of nearby New York State dressed poultry were fairly liberal and moved slowly. By the barrel, dry-

\$19 @ 22; heavy clover, mixed, \$21 @ 22.

Alfalfa sold fairly steady, No. 1 second cutting bringing at New York \$27 @ 29 per ton; No. 2, \$24 @ 26. Oats straw sold at \$16 @ 17; rye straw, \$24 @ 25.

Country Meats and Live Stock

Receipts of country dressed calves continue light, market reasonably firm under fairly active trade. Fresh, choice calves brought 20c per pound; prime, 18 @ 19c; good, 16 @ 17c; poorer sorts, 12 @ 15c. Country-dressed pigs were in light receipt, but demand slow. White skinned roasting sorts, weighing 10 to 15 pounds, brought 25 @ 30c per pound; 16 to 40 pounds, 20 @ 23c; 40 to 60 pounds, 15 @ 18c; heavier weights down to 10c. Hot-house spring lambs moved slowly, with fancy at \$10 @ 12 each.

At New York, good to choice steers sold at \$9.25 @ 10.10 per 100 pounds; ordinary to choice bulls, \$4.90 @ 6.50; common to choice cows, \$4.75 @ 5.15. Common to prime ewes brought \$4.50 @ 7.50; yearlings, \$8 @ 12. Medium to lightweight hogs and pigs sold at \$9.60 @ 9.75; heavy hogs, \$9 @ 9.25.

Little Change in Feed and Grain

Buffalo market continued steady in mid-January, with practically no change in prices. Carlots f. o. b. Buffalo, per 100-pound sack, sold as follows: Gluten feed, \$46.25 @ 47 per ton; cottonseed meal, 36 per cent protein, \$49 @ 49.50; cottonseed meal, 43 per cent, \$54.25 @ 54.75; oil meal, 33 to 34 per cent, local billed, \$54 @ 54.50; dried brewers' grains, \$49 @ 50; standard spring bran, \$32.05 @ 32.55; hard winter bran, \$33 @ 33.50; standard spring middlings, \$31.30 @ 31.80; No. 2 yellow corn, new, 82c per bushel; No. 3, 81c; new white oats, No. 2, 50c; No. 3, 48c.

Eastern grain markets registered little change during the week ending January 13. At New York, cash quotations were: No. 2 red wheat, for export, \$1.34 per bushel; No. 2 hard winter, \$1.34½; No. 2 mixed Durham, \$1.21; No. 2 yellow corn, 90¼; No. 2 mixed, 90¼c; No. 2 white corn, 90¼c; No. 2 white oats, 50 @ 55½c; No. 3 white, 53 @ 54½c; rye for export, \$1.02; barley for malting, 81 @ 83c.

Surprising "Come-Back"

"Veterinarians said, 'better kill, than try to cure so bad a case'. I had not used him for three months before I wrote for your free book. It is six months since I stopped treatment and there is not a mark of the trouble left. After I started treatment, I worked the horse and he was cured in about two months." L. J. Cornwell, Watertown, N.Y.

More than 350,000 satisfied users have had similar experiences with Save-The-Horse. It has unrivalled record of success for 29 years.

The Sow That Is to Farrow

KEEP the sow that is to farrow out of the fattening pen. Corn is not the best ration for the brood sow. She may get fat, but her offspring are liable to be weak and she is apt to overlay them at farrowing time. A fat sow is generally lazy and inactive, so when she overlays a pig and it squeals she will be too lifeless to get up and release it.

What the sow needs is a very small ration of corn and plenty of slops and green food. A small grass lot is an ideal place for a brood sow. She gets plenty of green foods and catches the slops from the kitchen. I like to mix some bran and shorts with her slop.

The sow that is about to farrow should be kept exclusively to herself night and day. Other hogs are liable to overlay and injure her on cold nights. If a horse, mule or cow is allowed in her run, she may be kicked or tramped upon and severely injured. She also needs a good shelter even in the summer time. She needs protection from the hot sun, the chilling rains or the pelting hail that may fall. A farrowing house will afford her the shelter she needs. An improvised one may be made of boards and covered with straw if nothing better can be afforded.

She also needs a good bedding of leaves or straw that will be a good protection for her young when nights are damp and cold.

Another point, the sow that is nearing farrowing time should not be allowed to drag herself over high places. Get all rails or boards out of her way so that she may have easy access to her sleeping quarters. Then she will not bruise herself or run any risk of a miscarriage.

After the sow has farrowed, she need not be fed until she appears hungry. Heavy feeding at farrowing time is liable to produce fever and result in the loss of the sow. Feed lightly at first. A very little corn and some slop is all she needs. She will need plenty of succulent foods as the days go by, and the owner should make it a point to supply these. He will be rewarded by a strong, healthy bunch of pigs that will develop into hogs very rapidly.—W. D. NEALE.

The Simplicity of Radio

(Continued from page 59)

complicated circuits for longer distance receiving. As has been pointed out above, the tuning coil with its slider tunes the aerial system to the various wave lengths. The detecting circuit is composed of the phone condenser and the crystal detector. The latter has the unique property of permitting current to flow more easily in one direction than in the other. The current in the aerial is reversing its direction very rapidly, and for this reason only one half of the waves are permitted to push current through the crystal. The magnets of the telephone receivers are wound with very fine wire which obstructs the passage of the rapidly alternating current by its high resistance. The electricity therefore cannot pass the phones, and it "piles up" in the phone condenser. After the electrical "charge" in the condenser is strong enough it discharges into the telephone receivers and causes the diaphragms to vibrate in unison with the variation of the wave radiated from a sending aerial. This variation may be in the form of short and long buzzes to form the code, or it may be modulated by the human voice.

The operation of the crystal set is simple. The contact arm is set at about the middle of the coil and the cat whisker brought down upon the crystal with a light pressure. One must feel around a little for the sensitive spot as the slider is moved slowly back and forth, the correct pressure varying with individual crystals.

For city locations, where there may be interference from commercial or amateur code stations, or perhaps from a multiplicity of broadcasting stations, there is an improvement in the nature of an additional coil, which may be added to the set of Figure 1 with but a slight change in the wiring. A discussion of this refinement, together with sketches of the connections, will appear in next week's issue.—BRAND FOOT.

Today—Post Yourself

Handy This picture shows how easy it is to hitch and unhitch. All parts just as simple as this.

Easy Adjustments Walsh Harness can be adjusted from large team to small team in ten minutes and fit perfectly.

Durability Not a single place on Walsh Harness for metal to rub and wear leather.

Quality Only strongest part of hide is used. High-grade, bark-tanned, packers' Northern steer hide leather.

Strength From photograph of an actual test made for U.S. Army Officers. One of our regular Walsh side straps holding seven men in air, and the Walsh strap holder did not slip a fraction of an inch. The same strap with buckle in it broke with three men. Get Free Book for complete details.

The average cost of repairs per year is only 9 cents

Before You Buy Harness

Post yourself on this new way of making harness which has three times the strength of buckle harness. Let me send you a set of Walsh No-Buckle Harness on thirty days' free trial, just as thousands in every state in the Union have done. Let me show you how harness can be made three times stronger without buckles—how much better looking and how much handier in every way. Try a Walsh on your team 30 days. Send no Money. If it is not all that I claim, send it back at my expense. No obligation on your part. Write for the free book today.

Costs Less—Lasts Twice as Long

This wide-open, liberal offer shows that the Walsh must be an exceptionally good harness. If I did not know positively that Walsh Harness is better in every way than buckle harness, I could not make such an offer. In addition to having harness in the hands of thousands of users the country over for years past, I have tested and proven in various ways that my harness is better and stronger, hence cheaper by far than any other harness. I prove conclusively in my new harness book, which I am waiting to send you, that Walsh No-Buckle Harness will positively last twice as long as buckle harness.

Greatest Advance in Harness Making

Not only is the Walsh No-Buckle Harness stronger, but it is easier to put on and take off. It is also better-looking, handier, and eliminates frequent repairs. Has better fitting hames, adjustable strap holder—the harder the pull, the tighter it holds—renewable spring snaps and many other advantages explained in my free book. The Walsh is easily adjusted to fit any horse perfectly. And remember that Walsh Harness actually costs less than buckle harness because it does away with repair expense, and lasts longer.

The World's Strongest Harness

Users say the leather in Walsh Harness is the best they ever saw in harness. It is old-fashioned, bark-tanned, packers' Northern steer hide leather. A test made in a scientific laboratory proved that a Walsh 1½ inch breeching strap holds over 1100 pounds. The same strap with buckle in it breaks at about 350 pounds pull. When you consider that ordinary harness has 68 buckles, and Walsh Harness none, you'll understand why my harness does away with repairs and outwears two sets of buckle harness.

Friction Another Destroyer of Harness

Rings are another thing that makes harness wear out before it should. Examine your old harness and you'll find where rings have worn the straps at the ends. There are 270 places on an ordinary buckle harness where ring friction wears the straps in two. Walsh Harness has no rings to wear straps in two. Many other advantages are explained in the free book. Write for it today.

What Users Say

Government Experiment Stations, Agricultural Colleges are among the thousands of users in every state who praise the Walsh Harness. Walsh Harness took First Prize at Wisconsin State Fair in 1921 and 1922.

Mr. G. G. Anderson, Aiken, Minn., bought his first Walsh Harness five years ago and bought three more sets since for his other teams. He says: "Walsh

has buckle harness beat a mile."

Mr. E. E. Ward, Seneca Falls, Wis., says: "Have used Harness over 40 years. The Walsh is the best yet."

Mr. J. W. Rogers, R. No. 4, Baldwinsville, N. Y., says: "Have used it skidding logs and that is giving it a hard test. I think enough of it that I will order another set in the Spring."

\$5.00 After 30 Days' Free Trial

Balance easy payments or pay cash after trial if you wish. Selling direct from the factory to you enables me to give the highest quality of harness possible to make at lowest prices. You can get a Walsh Harness in any style—Breechingless, Back-Pad, Express, etc. Easily adjusted to fit any horse perfectly.

Write Today. My free harness book will give you many wonderfully interesting facts and valuable information on harness—tells all about the Walsh No-Buckle Harness—what hundreds

of farmers think about it. We have a plan whereby you can make money showing Walsh Harness to your neighbors. There's a copy ready for you—Write Today.

League Wins Great Legal Victory

Decision in Barnes Case Vindicates Farmers' Cooperatives

EVERY farmer who believes in organization and cooperation will rejoice with the thousands of members in the Dairymen's League Cooperative Association in the far-reaching decision just handed down by Referee James H. Merwin in the case of Barnes vs. Dairymen's League Cooperative Association and the Borden's Farm Products Company. The decision is a complete victory for the Cooperative Association. It will be remembered that the plaintiff, Barnes, a farmer and patron of the Borden Company at its Westmoreland plant sought an injunction to restrain the Borden Company from refusing to take his milk. Barnes claimed and tried to prove a conspiracy on the part of the Borden Company and the Dairymen's League Cooperative Association to fix the price of milk and to refuse to buy from him unless he joined the pooling association.

The trial of the case lasted for weeks during the past summer. A large amount of publicity was given to the case and a real attempt made to hold up any effective operations in the way of real cooperation on the part of milk producers. Time and time again milk marketing associations throughout the country have been brought into court through the efforts of the enemies of cooperation for the purpose of restraining and crippling the growth of the cooperative movement. In every instance such efforts have failed, although they have been unfortunate in costing the associations large sums of money which producers can ill

spare and in giving the general public wrong ideas of the real work and purposes of cooperation.

This makes the second case in which the League has won an outstanding victory in legal battle with its enemies. Last year a lawyer farmer of Binghamton brought action against the League for damages claimed to

illegal conspiracy and the plaintiff has no cause for action whatever.

"The defendants have done no blacklisting or boycotting, nor have they indulged in any of the underhand practices which so often have been under condemnation by the courts in cases like this and which have always had a strong influence upon the decision of the court.

"I cannot on the evidence convict the Borden Company for any complicity in any scheme to force its patrons to join the pool and it certainly has a legal right to purchase its milk of any individual or groups of individuals that it wishes."

A statement issued by the Cooperative Association on the decision says:

"The decision is not only a victory, but a complete justification of the cooperatives' position. The decision is peculiarly significant, in that similar decisions have been rendered in the Western States and the cooperative movement has thereby obtained a very strong position.

"Nevertheless, this is the first important decision in the Eastern States, which has gone into the cooperative marketing proposition exhaustively and is, therefore, very far-reaching in its result and will be historical.

"The cooperative associations, in its defense, has upheld the cooperative movement from every standpoint, and therefore, its action will be of great service to all cooperative marketing associations in the United States."

Kick in the Right Direction

THE Grange Monthly tells the following story about kickers in organization work, which is particularly worth thinking about by every member of the Dairymen's League Cooperative Association.

In one of the State lecturers' conferences we heard tell about a herd of mules at pasture being attacked by wolves. The mules huddled together in a circle with heads out to see the attacking pack and began to kick. They kicked each other to death and the wolves ate their carcasses. If the mules had put their heads together and kicked out, they would have kicked the wolves to death. The Grange exists to keep the heads of the farmers together in thought and when they kick, they kick out on all sides.

Alas, what a lot of farm organizations have kicked themselves to pieces! Be a kicker, but be sure whom you are kicking. Never let your heels be where your head ought to be. The decision in the Barnes case shows that the courts are standing by honest farmers' cooperatives. League members are soon to determine whether they can stand by themselves.—THE EDITORS.

be sustained because the League prevented him from marketing his milk. The result of this attack on the organization was a "no cause of action" verdict.

In handing down the decision in the Barnes case, Referee Merwin said in part "The defendants have not entered into any

Holstein Men Urge Extension of TB Work

Spirit of Optimism Prevails at Annual Meeting of New York Breeders

A GENERAL spirit of optimism, expressed in several concrete suggestions for improvement in the cattle industry during the coming year, marked the third annual meeting of the New York Holstein-Friesian Association held at Syracuse on January 16.

Among the noteworthy actions which showed the sentiment of the members, was the passing of resolutions condemning the display of "bogus" butter at the Syracuse State Fair, requesting the Federal Government to continue and extend the program to eradicate the ox-warble fly in the State, and urging the appropriation of sufficient funds to pay overdue indemnities for tubercular cattle and to cover payments to July 1, 1923.

The association, according to the report of the Secretary at the meeting, now has a membership of 1,175. During 1922, it conducted five sales, at which 638 head of cattle brought \$127,000.

One of the most enthusiastic moments of the afternoon session came with the passing of the resolution against permitting the "bogus" butter display. The wording of the resolution which called upon the United States Government to continue the campaign to eradicate the ox-warble fly, invited the

federal authorities to put on a three year program in one county of the State.

Professor H. H. Wing announced that he, Paul Meisner and Jimmie Bauermeister had judged the cattle consigned by the various

Wing, Ithaca; H. Morgenthau, Jr., Hopewell Junction; H. V. Noyes, Oneida; C. B. Fletcher, Evans Mills.

The Board of Directors for the ensuing year are as follows:

Harry Yates, Buffalo; Maynard Smith, Horseheads; W. A. Follett, Norwich; H. V. Bump, Cambridge; C. B. Marshall, Morrisville; R. W. Dennis, Comsted; C. F. Bigler, Syracuse; G. N. Smith, Watertown; E. J. Chaffee, Wassaic; H. L. Stafford, Peru; R. E. Chapin, Batavia; Harvey Tarrington, Lowville.

C. F. Bigler was re-elected president, with the following list of officers: Maynard Smith, first vice president; C. B. Marshall, second vice president; George Smith, treasurer and E. R. Zimmer, secretary. The Executive Committee is composed of R. E. Chapin, Harry Yates, H. Farrington, and the President and Secretary ex-officio.

In the evening more than 180 breeders braved the big snowstorm to attend the third annual banquet of the association.

The first speaker, Secretary E. R. Zimmer, (Continued on page 75)

Milo D. Campbell on Federal Reserve Board

MILO D. CAMPBELL, President of the National Milk Producers Federation, has just been appointed by President Harding as a member of the Federal Reserve Board. Mr. Campbell is well known by organized farmers everywhere and particularly in the East, where he has so often spoken on their problems straight from the shoulder and worked so effectively to solve them. The farmers of America are to be congratulated on having a true representative of agricultural affairs in such an important position. We extend to Mr. Campbell our heartiest congratulations.

clubs and had made awards to the following counties: First, Tompkins; second, Jefferson; third, Allegany; fourth, Onondaga.

Delegates to Cleveland Nominated

Nominees for delegates to the National Holstein Association to be held at Cleveland this year were as follows:

F. M. Campbell, Wilson; F. D. Van Buskirk, Hornell; Fred Blewer, Owego; W. W. Stevens, Liver-

Our Only National Farm Fraternity

The Grange, America's Greatest Farm Organization—By S. J. Lowell

IN the progress of the United States during the past half century it has fallen to the lot of few organizations to render such distinct civic, economic and patriotic service as the Grange; while the latter easily heads the list of all rural associations that have striven to promote the welfare of the people who live in the open country.

Organized immediately following the Civil War, the Grange sought to rehabilitate the nation's stricken agriculture, and towards this end outlined a program more far-reaching than simply to promote the material prosperity of the farmer. It recognized that the real compensations of rural life are deeper than merely dollars and cents—that the atmosphere of the rural community, the social and educational privileges found within it, the comforts and conveniences of the farm home and an adequate opportunity for the development of its youth—all these constitute the background for a successful agriculture, deeply rooted in the happiness, contentment and ambition of its toilers.

A Leader in National Farm Affairs

Made up very largely of property-owning people, leaders in their respective communities and exponents of the highest patriotic and moral ideals, the Grange from the very start took a place of leadership in national affairs and with its growing membership and widening scope its influence has more and more impressed itself upon the progress of the half century. Organized to-day in thirty-five States, from Maine to California, the Grange embraces more than 8,000 local branches, has 800,000 dues-paying members and holds more than 200,000 meetings every twelve months: its organized energies devoted to the clearly-defined purposes: "To educate and elevate the American farmer." This is the Grange, the greatest farm organization, and the only farm fraternity in America.

That the Grange has striven all these years for vital things is amply evidenced in the fact that to its credit stands such a fine line of legislative, educational, civic and moral victories as the following: Free delivery of mail to millions of rural homes; parcel post and postal savings banks; vocational education; inaugurating a rural credits system; protection of dairy products from the unfair competition of imitation substitutes; widespread interest in better roads, particularly from farm to market; definite supervision of all public utilities; stringent pure food laws; increased appropriations for agricultural

and experimental development work; extension of prohibition; enfranchisement of women. In all these worthy undertakings the Grange has performed an active part, while many of them were initiated within its councils.

The Grange is splendidly democratic in its

ginning and with the highest of American ideals its guiding purpose, the Grange maintains to-day the sturdy purpose of its Founders—a genuine fraternity of farmers, strongly united with their families to serve the welfare of rural America.

While thus actively espousing the farmers' cause the Grange is likewise safeguarding the future, in that among its most noteworthy activities is the constant training and helpfulness for young people, thereby fitting them for the large civic duties which they must later assume. Here also is the outstanding feature of Grange assurance for future prosperity and growth. Indeed, in its care for its growing youth, it practically exemplifies the force of its fraternal motto, "Esto perpetua."

Two Outstanding Reasons for Strong Consistent Growth

There are many reasons why the Grange has made such a strong consistent growth in membership and influence and why it has been such a success in elevating farm life in America. But if I were to name two of the main reasons for Grange success I would say first, that the Order has always recognized the importance of women in the farm and national life and taken them in its membership on a par with the men; and second, that the Grange has recognized and worked for the spiritual and ethical in rural life as well as for material advancement.

It should be a source of pride to the Grange in this day of complete emancipation of women to remember that the Order has since its inception recognized woman's equality in all lines of endeavor. Particularly on the farm, where the farm home is such an important part of the farm business and where the whole farm operation is one of partnership. The woman's hard

work and sacrifices have done much to make the farm business a success and the farm home the best in the world.

Regarding the spiritual and ethical principles for which the Grange stands, we need them in these unsettled times more than ever.

America has sometimes been called the "land of dollars." Dollars are necessary. But there are things bigger and better than dollars and unless the individual can learn to recognize and appreciate those larger things he is bound to fail in ultimate happiness and in service to his fellows. The Grange recognizes and has built much of its success on those larger principles of life and living.

What the Grange Stands For

NO matter what the ups and downs of other organizations may be, each year sees the Grange making steady progress in size, influence and results accomplished. In reading the history of the Grange recently we found a declaration of purposes published in 1874, setting forth its specific objects. Although written nearly a half century ago these objects apply equally as well to-day. One does not have to look further than a statement of these objects, which we give below, to find the chief reason for the remarkable success of this great organization.

"We shall endeavor to advance our cause by laboring to accomplish the following objects:

"To develop a better and higher manhood and womanhood among ourselves. To enhance the comforts and attractions of our homes, and strengthen our attachments to our pursuits. To foster mutual understanding and cooperation. To maintain inviolate our laws, and to emulate each other in labor to hasten the good time coming. To reduce our expenses, both individual and corporate. To buy less, and produce more, in order to make our farms self-sustaining. To diversify our crops and crop no more than we can cultivate. To condense the weight of our exports, selling less in the bushel, and more on hoof and in fleece; less in lint, and more in warp and woof. To systematize our work, and calculate intelligently on probabilities. To discountenance the credit system, the mortgage system, the fashion system, and every other system tending to prodigality and bankruptcy.

"We propose meeting together, working together, buying together, selling together; and, in general, acting together for our mutual protection and advancement, as occasion may require. We shall avoid litigation, as much as possible, by arbitration in the Grange. We shall constantly strive to secure entire harmony, good-will, vital brotherhood, among ourselves; and to make our Order perpetual. We shall earnestly endeavor to suppress personal, local, sectional, and national prejudices, all unhealthy rivalry, all selfish ambition. Faithful adherence to these principles will insure our mental, moral, social and material advancement."

organization, as its leaders are selected from the ranks and are constantly responsible to the membership for their acts; while the smallest subordinate is directly represented in shaping all the policies of the organization. The fine system which assembles subordinate units into Pomona or district bodies, these turn into State Granges and all the States compactly joined in the National Grange, creates an efficient force to get results and establishes a strong tie from the lowest to the highest rank of the Order. Free from every religious or political test for membership, embracing both old and young to a remarkable degree, admitting men and women on a plane of exact equality from its very be-

The Eastern Farmers' Advantage

OUR cover page gives a glimpse of the world's greatest market for farm products—New York City.

Into its great maw there comes every day ships laden with the products of almost every country in the world and hundreds of carloads of every kind of produce from the farms of nearly every State in the Union. Farmers of the East have the advantage of this great consumption center almost at their door. All they must do is to make their products high in quality and organize to sell them efficiently, and then they have a running start to beat every competitor to the best markets in the world.

Too Many Apple Varieties

STATEMENTS were made at the annual meeting of the New York State Horticultural Society at Rochester the other day, that over 240 different apple varieties were handled this season by the Western New York Fruit Growers Cooperative Packing Association, Inc. This ridiculously large number of varieties shows the grave need of standardization to a much fewer number. There are few producers, however, experienced in the business that can name a majority of the different apple varieties and when it comes to consumers it is of course impossible for them to ever become acquainted with more than a possible half dozen different kinds of apples. One of the reasons why western apples have made a big hit in eastern markets is that consumers have come to recognize the two varieties which are most seen and advertised, the Delicious and the Spitzenberg. There is no outstanding eastern apple known by any large number of consumers, unless it may be the Baldwin.

The many varieties also make it very difficult for the packing associations to handle

the large number of different pools, and the too many mixed cars, all of which causes delay in closing the pools and paying the producers.

Cutting down the number of different kinds of apples is a matter of education which will take some time and decided and united action on the part of the apple marketing associations. In the meantime perhaps there may be a grouping together and handling of varieties of very similar nature which may help somewhat to simplify the problem.

Chicken Thieves

IN an old farm-house bedroom, some twenty years ago, Brother George, since better known as George Duff, and ourselves lay sleeping one night as only farm boys can sleep. It was one A. M.—that no man's time when events of the day before have faded into the past and those to come are still with the future.

Suddenly we were awakened by a hand over our mouth. Mother was whispering in our ear "Hark! Hark! Don't make any noise! There are chicken thieves in our hen-house. Get up quietly while I get George up." Fire, murder and sudden death, none of them can raise any more gripping terror and creepy chills in a country boy than a midnight whisper: "There are thieves in the henhouse!" The only other excitement that even approaches it is that call which always stops every farm operation and puts everyone into a run—"The cows are in the corn!"

We got up and pulled on the overalls while Mother strove to wake George Duff. She had difficulty. It afterwards developed that he was fully awake from the first, but cold fear had gripped his heart and he strove to avoid his duty by feigning sleep. But Mother was insistent. And in her fear lest the thieves would get away with her prized pullets, she rolled him out on the floor.

Now George was a great gun enthusiast, and stored away in a rack in his room were representative firearms covering nearly every period of American history. It had often been George's boast that no one would dare to monkey around that homestead in the night, for if they did he with his arsenal would make short work of them.

Finally we were ready to sally forth. George Duff was armed with the gun which he always kept loaded with buck shot and rock salt for just such an emergency. To ourselves he handed a little air gun which he claimed with the usual frankness of an older brother, was as much of a gun as was safe for us to handle.

Far be it from us to cast aspersions upon the bravery of a "gun man" but we have always had our suspicions about that night's operations. We will grant that George Duff was willing to scare the chicken thieves away, but we still think he wanted to do that scaring from a safe distance. Nor is our belief founded entirely upon opinion. In passing out of the back door George Duff suggested that we keep well ahead of him carrying the lantern that he might see the better to apply the rock salt to the proper part of the thieves' anatomy. Also we noted that he very carefully drew the screen door out, and let it go shut with a loud bang, and too, it seemed to be necessary for him to clear his throat many times in a loud and efficient manner.

Anyway, whatever his motives were, his noise scared the thieves and they came dashing out of the henhouse and over the garden fence with us in swift pursuit popping away with our little air gun while George well (and safely) in the rear urged us on with loud and encouraging shouts. Across the garden, through the orchard and well up the lonesome hill road we ran still popping away with the air gun which the thieves in their

fright no doubt thought was the whole Duff arsenal in action. Finally when we could no longer hear their retreating footsteps we gave up the chase knowing that their scare would keep them from molesting our hens again. When we finally got back to the house we found George Duff sitting on the horse block waiting for us. "I tell you Eddie" says he "if it hadn't been for this darned 'asthmee' interfering with my breathing, I would have had those robbers well started toward the county jail by this time!"

Mr. Bullock Resigns

READERS of American Agriculturist will be sorry to know that Mr. W. H. Bullock, so long connected with our Editorial Staff has resigned to accept Secretaryship of the New Jersey Federation of County Boards of Agriculture. In addition to the regular duties of Secretary of the Federation of County Boards of Agriculture, which corresponds to the New York State Federation of Farm Bureaus, Mr. Bullock will have charge of building up a centralized plan of agricultural publicity and promotion not only for the Federation, but also for the various other commercial and noncommercial farmers' organizations in the State.

Mr. Bullock has been with American Agriculturist for over eight years. In that time he has come to be known over a wide area as a capable and fearless champion of rural people and their problems. Mr. Bullock's long training in writing and in editorial work well fits him to make a success in the responsible position which he has assumed and we join with his thousands of friends in wishing him the greatest possible success and happiness.

A Good Book Well Dedicated

ONE of the chief reasons why New York has no superiors and few equals in farm bureau work is the splendid leadership that has been given almost from the beginning by M. C. Burritt and H. E. Babcock. These men because of their ability to choose farm bureau agents who could make good and because of their genius for organization have given much to New York State agriculture.

In a recent book called "The County Agent and the Farm Bureau," published by Harcourt, Brace and Company, New York City, Mr. Burritt has summed up the accomplishments of the farm bureau and offered suggestions for continuing to make the work of the county agents more vital and worth while. Various phases of the county agent's service to his locality are analyzed, the programs of different counties are commented upon and the results correctly summarized. The relation of the county agent to the farmer, to the community, to the commercial enterprises and to government departments are clearly defined. The book is an important contribution to agricultural literature.

In the dedication of the book there is an interesting and kindly little story. As most of our readers know, Mr. Babcock was seriously injured by an automobile while he was riding a horse and confined to his home for many weeks during the past Fall. One day when he was feeling particularly discouraged and blue, Mr. Burritt came in for a visit. As he left he presented to Mr. Babcock a copy of his book which was then just off the press. After Mr. Burritt was gone, Mr. Babcock in looking the book over was very much surprised to find the following dedication:

"To H. E. BABCOCK

Whose energy and good judgment have been a constant source of inspiration and of confidence during our eight years of public service together,

THIS BOOK IS DEDICATED."

Fruit Men's "Annual" Best Yet

Horticultural Society Stages Fine Exhibit and Meeting at Rochester

IF you like fruit and are interested in the many problems of the fruit producer you would have enjoyed the annual meeting of the State Horticultural Society at Rochester, January 12 and 13. The exhibits were good; the attendance was large and the program fair. The program could have been much improved had there been two or three talks which were not quite so technical and more of an inspirational nature. In attending this meeting one could not help but be particularly impressed with the great interest that producers are taking in the technical problems of their business. But in these discouraging times men need in addition to technical information some encouragement and inspiration that will give them hope to fight the many disheartening farm problems.

The fruit and machinery exhibits were especially good. Let Eastern growers market their fruit as well as they grow it and they will not have much cause for discouragement in results from their business.

No one can attend an exhibit of New York State apples without a feeling of pride in the natural qualifications for fruit growing in this section and the ability of Eastern fruit growers to make the most of those qualifications in growing the finest apples in the world.

The hall where the exhibits were held at Exposition Park was filled with an impressive array of machinery and supplies needed in orchard culture. The amount and variety of equipment necessary in the business shows what a great technical trade modern fruit growing has become. Farmers of former generations set out their apple trees and picked the fruit. Sometime when the spirit moved them they did a little "trimmin," but for the most part their orchards "just grew" and they paid little attention to them. The change in methods that has been necessary to pro-

Eastern apples lead the world in quality. The fruitgrower's job is to convince the consumer of this fact

duce modern fruits is emphasized by the statement which we heard one grower make at the Convention, to the effect that it had cost him over a thousand dollars during the past season to spray his orchards, to say nothing of the other care that had been given them.

Officers elected to head the Horticultural Society for the coming year are as follows: President, J. B. Pease, of Gasport; first vice president, C. S. Wilson, of Hall; second vice president, E. W. Mitchell, of Kinderhook; third vice president, J. G. Case, of Sodus; fourth vice president, F. J. Freestone, of Wayne county; secretary and treasurer, Ray McPherson, of Le Roy; treasurer of the permanent fund, H. E. Wellman, of Kendall; Executive Committee, Wiltsie Tenbroock, of Hudson; T. E. Cross, of Lagrangeville; W. D. Chase, of Monroe county and Leslie Tanner, of Sodus.

A large amount of care was given at the meeting to resolutions effecting the interest

of fruit growers and those adopted by the Convention are so important that we are giving most of them in full below:

Supports College and Equipment Station

WHEREAS, the benefits to the Horticulture of the State of New York from the investigations which are being conducted at the State Agricultural Experiment Station at Geneva, are becoming increasingly apparent each year; and

WHEREAS, the Program for the Development of the facilities for research at the Station which has been prepared by the Director and Staff gives promise of still greater benefits to the industry in the future; therefore, be it

Resolved, that the New York State Horticultural Society, at its annual meeting in Rochester in January, 1923, hereby reiterates and confirms the action taken at its summer meetings in approval of the proposed Program of Development of the Station, and urges the adoption of this plan by the Governor as the basis for future financial support for the Station; and be it further

Resolved, that we specifically urge the Legislature of 1923 to make the necessary appropriations for the erection of the horticultural research laboratory building at Geneva and for the inauguration of the field investigations in horticulture in the Hudson River Valley.

WHEREAS, Dr. Thatcher of the New York State Experiment Station at Geneva has prepared a plan at the request of the fruit growers for greatly enlarging the work at the Station, therefore, be it

Resolved, that this Society hereby endorses that general plan and requests the chairman of the Senate Finance Committee and of the Assembly Ways and Means Committee to approve such plans. Also that a copy of this resolution be sent to each of the above named men.

WHEREAS, the present buildings of the College of Agriculture at Ithaca are inadequate—lacking in accommodations for the staff of instructors and in seating accommodations for the students; and

WHEREAS, the general building plan formulated several years ago provided that a Plant Pathology building should be erected the present year, therefore, be it

Resolved, that the New York State Horticultural Society hereby petitions the present Legislature to appropriate sufficient funds to erect and equip the

Lowly, It's True, Yet Fundamental

The Handling and Use of Farm Manure—By Jared Van Wagenen, Jr.

I AM moved to write briefly regarding one of the lowliest and yet one of the most important and fundamental of agricultural labors, viz., the handling and use of manure. I approach this topic not as one giving proper information, but rather

J. VAN WAGENEN, JR.

as one who has become a little shaky and uncertain as to his own practice and preaching, and who would frankly like to ask the advice and experience of other men. If there is one phase of farm management for which, both by paternal training and by experience, I have a vast liking and interest, it is this very humble subject. My father was a good farmer, and from my earliest youth, by precept and example, he impressed upon me the Doctrine (he didn't call it by that name) of the Conservation of Manure.

It is a homely tale, but absolutely true, that in dry, snappy winter weather, I was frequently detailed to go into the snow-covered, hard-packed barnyard with a mattock or ax and loosen up the fresh, frozen cow dropping, so that they might be loaded on the sleigh. Anyone who has ever engaged in this lowly occupation, will remember how a single sharp crack of the ax will result in a clear-cut separation of the frozen mass from the icy bed below. Moreover, the job has in it certain elements of sport, a sort of game, if you will, ever so much more inspiring than, say, running a buck-saw or turning grindstone. I think it might be reckoned a sort of barnyard polo played on foot instead of horse-back.

One Way to Measure Its Value

I believe my father used to assure me that each one of these frozen mounds would grow a hill of corn, an estimate of their value a good deal higher than would be borne out by the cold findings of chemical analysis. With a boyhood training of that kind regarding manure, it is small wonder that I still have a very great regard for the humble material, and like to spell it with a capital M. I sometimes say that the corner-stone of American agriculture is represented, not by a bag of commercial fertilizer, but by a pile of manure.

I think it must have been at least a dozen years ago, when Dean Cook raised a veritable furor by somewhere declaring in a public address that in the mind of many dairymen, the real object of keeping a cow is her manure, and that her milk is only a by-product. It was one of those striking epigrams that carry far, and later he had to do a good deal of explaining. It seems to me that very few agricultural statements ever aroused as much comment and interest and resentment as did this happy flash of the Dean's. Well, I must confess that my own mental outlook almost puts me in the class of dairymen to whom Cook referred.

My memory and experience in agricultural audiences goes back to the days when the manure pile under the barn eaves was the favorite mark of every agricultural exhorter. We never failed to wallop it soundly. We used it as did the old-time temperance lecturer who was accustomed to hire the village drunkard to sit on the platform with him and be held up before the audience as a "horrible example." Even good Professor Roberts used to tell of the farms he had seen where it

was an open question if it would be easier to move the manure pile or move the barn.

One Good From Sanitary Inspection

Well, this one-time pertinent matter has largely lost its importance. The classical manure pile beneath the eaves has pretty well vanished from the milk-shipping districts. I have small regard for the average city milk inspector, and a large proportion of the 160 odd rules that the New York Board of Health has established have very little bearing on the question of good milk—yet one great service the so-called sanitary inspection has accomplished—it has brought about a general clean-up of barnyards such as no amount of mere exhortation by press or platform would ever have accomplished. We have been pretty thoroughly reformed by strong-arm methods, for which let us be properly thankful. It may fairly be said that the daily drawing of manure, or at least its removal, to 100 feet from the stable, has become the rule rather than the exception.

I think I have now come to the questions that I had in mind to ask—Where shall we use this manure and how and when shall we apply it?

Of course, in the great majority of cases in the East, when we think about manure, we are thinking about the

POLO IN THE BARN YARD

MILO D. CAMPBELL, president of the National Milk Producers Federation, tells a good story about one of his neighbors up in Michigan. It seems that this neighbor lived near another farmer who was noted for his closeness, and being rather irritated by this characteristic in a business transaction he rather emphatically referred to the farmer as "the most manurist cuss" he had ever seen!

Mr. Van Wagenen has written on this page a "most manurist" article and has made the very good suggestion that some short letters, giving your experience with this essential practice in good farming would be worth while. All right, let's have some.

Incidentally, because there is so little opportunity for recreation on the farm, we call especial attention to Mr. Van Wagenen's suggestion for playing "barnyard polo!"

dairy farm, and by common usage we dairy farmers of this region have pretty nearly standardized on a three-crop (not a three-year) rotation, this being corn, followed by oats, or better, oats, peas and barley in mixture with the grass seed and then the meadow mown until in the judgment of the owner it needs breaking up and putting into corn again. This is a very simple, yet widely used, and, I feel sure, sound rotation for most dairy farms.

The Choice of Where to Place It

Well, that leaves us only two choices as to where to put the manure. It must be used either on the new seeding or on the old meadows that are to be or have been plowed for corn.

Green nitrogenous manure had better be kept away from oats, unless it be on pretty poor land, because oats make trouble enough with lodging, even with the fertility left over by the corn crop. As to whether we shall use manure to grow new seeding or to grow bigger corn, I don't believe it is a vitally important matter. Our old practice, and one very common throughout the State, was to put the manure on the ground where corn was to be planted. More recently I find we are swinging over, at least in part, to the practice of spreading it on our new seeding or best yearling meadows. I think I can give some good reasons for using this method. For one thing, theoretically, at least, there is less likelihood of loss of plant food when manure is spread on a living sod rather than on raw, fall-plowed land. But no one knows just how much there may be to this idea.

Another reason is that if manure is full of weed seeds, especially yellow or wild mustard, which is one of our most troublesome weeds in both oats and corn, it will be better to spread on a meadow and let these seeds germinate and perish harmlessly, instead of giving them a fine seed bed along with the corn. Yet another reason for using it on new seeding is that the clover plant is so fundamental to agriculture, both

as a nitrogen gatherer and soil improver, and as a source of protein in the ration, that we may well devote our greatest energy to getting the maximum results from this plant.

Sometimes, however, there is a rather serious difficulty in spreading manure on the meadows. On Hillside Farm we grow a good many oats and generally a few acres of wheat, and so have more straw than we usually know what to do with. If coarse, strong manure is thickly spread on meadows without rotting, a good deal of it may rake up again with the first crop of hay.

Are We Justified in Piling Manure?

Now I am coming to the point regarding which I wish to ask advice: Are we ever justified in piling manure in large piles on the field to be spread later on?

For a great while I have been accustomed to say—making it a sort of a categorical statement—that the proper way to handle manure was out of a water-tight gutter behind the cows, into a water-tight wagon box and then spread upon the land, regardless of weather conditions, every day in the year except Sunday. I say "except Sunday" because as a churchman I believe in cutting down chores on that day to the irreducible minimum and because outside of that the dairyman must make an effort to practice as far as possible his greatly broken day of rest. For years in practice as well as preaching I lived up to this exhortation.

Right here is where I am becoming a little irregular and shaky. There are two or three reasons why I am asking questions about this. For one thing, I cannot quite rid myself of an uneasy feeling that where manure is spread on deep snow, or perhaps worse, on a bed of ice covering the fields, and then there comes a thaw and rain and a rush of water everywhere, I am afraid I say that some of my precious plant food goes merrily to the sea. I am sure that a coffee-colored stream goes from the field. Of course, the wise men tell us in rather learned terms that this is mainly coloring matter and tannin. But, like the Scotsman, "I ha' me doots."

The unfortunate truth about manure is that it is almost impossible to handle it without some loss. We lose if spread under some conditions, at least. We surely lose if piled in the open. Even if sheltered from the weather, we lose nitrogen.

Just a word to give a couple of reasons for sometimes piling in the field.

We ought to spread manure more widely, smaller application and more frequently. A manure spreader will do a better job and make a load go further than would be possible by the most careful hand-spreading. Moreover, I am not sure that the practice of piling really requires much more labor. It is a debatable question if we cannot pitch off a load of manure and pitch it on the spreader again about as quickly as we can do a really careful job of hand-spreading. Moreover, if it is on new seeding, the manure spread by power will not be nearly so troublesome by raking up in the hay next year.

At present we are spreading most of our daily product of manure. Later, as the snow becomes deep, we shall put it in large piles on the knolls away from pools of water and where the snow will not bank around it.

Next spring, as soon as the ground becomes firm enough and before work on the land begins, this manure will be rapidly handled with a spreader.

I know that this is not really orthodox. I am not even cock sure of my own position, and am willing to take advice. I am merely stating the matter as I happen to see it now.

Endorse Rural School Plans

Agricultural Society Urges Important Legislation

STATING that agriculture was fed up on words and needed some action, Governor Smith told the annual meeting of the New York State Agricultural Society that the State Department of Farms and Markets was not efficiently functioning and that it should be reorganized. The meeting of the Society was held in the Assembly Parlors in the Capitol Building at Albany on January 16 and 17. The Governor spoke on the evening of January 16. He said that it was his thought that the Department of Farms and Markets would be much improved if the Commissioner was appointed directly by the Governor instead of by the Council of Farms and Markets, as at present.

The Governor was preceded in the evening session by Lieutenant-Governor Lunn, who outlined the needs of farmers as he saw them, and expressed the desire of the present State Administration to cooperate with farmers in working out their problems.

H. E. Machold, Speaker of the Assembly, told the farmers that he did not think so much talk about farm credits was of very much help to farmers; that one of the difficulties of all kinds of business at the present time is that they had too much credit during the war. He also suggested that if farmers would come as a unit when they asked for legislation they would be much more likely to get it.

Officers of the State Agricultural Society for the coming year were elected as follows: President, A. L. Brockway; Vice-presidents—E. R. Eastman, New York City; H. B. Fullerton, Medford; Peter G. Teneyck, Albany; George W. Sisson, Jr., Potsdam; W. A. Parsons, Syracuse; Henry Burden, Cazenovia; W. P. Schanck, Avon; S. J. Lowell, Fredonia; J. A. D. S. Findlay, Salisbury Mills; Secretary, Charles H. Baldwin, Albany; Treasurer, Harry B. Winters, Albany; Executive Committee, John J. Dillon, New York City; R. W. Thatcher, Geneva; T. E. Cross, Lagrangeville; W. H. Manning, Saratoga; F. J. Riley, Sennett.

Committee of 21 Endorsed

Among the important resolutions adopted was one heartily endorsing the work and suggestions for the improvement of rural schools of the Joint Committee of 21, and resolving that the recommendations of the committee be drafted into legislation and enacted into law, and that such action be sponsored by the State Agricultural Society and all other farm organizations. Another resolution heartily endorsed the work being carried on by the Port of New York Authority for simplifying of transportation and marketing machinery in the metropolitan district. Another resolution urged the resumption of construction of needed buildings at the State College and the State Experiment station. And, another one pledging the support of the Society to get the World's Dairy Congress at Syracuse and to make its program and attendance a success. An important resolution effecting local taxes was adopted by the Society to the effect that the cost of building and maintaining bridges on improved highways of the State be derived from the same sources that builds the roads.

BIG FARM WEEK AT TRENTON

The farm organizations of New Jersey, cooperating with the New Jersey State Department of Agriculture, the College and Experiment Station, the their annual Agricultural Week at Trenton, N. J., January 16 to 19. It was one of the best annual conventions since the creation of Agricultural Week in 1915. In conjunction with the educational and business programs of the various organizations, a Farm Products Show was held in the large Armory which displayed the potatoes, fruit, corn, poultry, swine, cattle and dairy cattle produced on New Jersey farms.

The large educational exhibit of the New Jersey State College of Agriculture depicted the splendid progress which this institution has been making in recent years. The New Jersey State Bureau of Markets, cooperating with

the individual farmers of the State, portrayed the work of that department by an attractive booth.

The legislative program of the New Jersey State Federation of County Boards of Agriculture, at its annual meeting during Agricultural Week, called for an active season ahead on the part of the Federation. The New Jersey State Highway Commission was requested by the farmers to determine the means of building substantial rural and township roads at a cost in keeping with the taxing ability of adjacent property, this in conjunction with the Good Roads Program collectively urged by the farm organizations in New Jersey. The Federation also endorsed the reorganization of the New Jersey State Highway Commission into a small governing body of not over three men and renewed its previous endorsement of open competitive bidding for all highway construction work.

Motor vehicle fees more nearly commensurate with the wear and tear of the vehicles upon the road were also recommended by the Federation members, who demanded that "in keeping with such requirements the registration fees on heavy trucks should be greatly increased, and the weight of such trucks should be reduced until such time as definitely designated roads are constructed which will permit the use of heavy trucks." The improvement of rural schools and a more centralized agricultural program for the farmers' organizations of New Jersey were recommended.

The Goal of Organized Agriculture

Participation of all of the New Jersey agricultural institutions and farm organizations in a broad, centralized program was pointed out as the goal of organized agriculture in New Jersey by Dr. Frank App in his General Secretary's Report for 1922. He said: "During the past two years we have made rapid strides in this direction. This is particularly true in all matters pertaining to agricultural legislation. A large measure of the success has been due to the hearty cooperation of the New Jersey State Grange, working in conjunction with the Federation."

For the coming year the officers of the New Jersey Federation of County Boards of Agriculture are: President, H. E. Taylor, Freehold; Vice-president, H. B. Hancock, Bridgeton; Treasurer, Dr. Frank App, Trenton; Secretary, W. H. Bullock, Trenton; Trustees: E. E. Logan, Mt. Holly; Joseph Barton, Moorestown; W. H. Whiton, Neshanic. The Executive Committee is composed of: Henry Tapken, Egg Harbor; C. B. Lewis, Riverton; H. H. Bell, Mt. Ephraim; Joseph Camp, Pierces; R. C. May, Vineland; Lester C. Genung, Chatham; Harry Lafferty, Sewell; John Tine, Lebanon; William H. Blackwell, Titusville; D. J. Perrine, New Brunswick; H. W. Herbert, Englishtown; W. H. Haines, Dover; R. Franke, Whitesville; C. E. Moore, Daretown; W. H. Whiton, Neshanic; Ralph Decker, Sussex; and Ernest Race, Belvidere, all of New Jersey.

Potato Men Seek Aid

The most important business before the annual meeting of the New Jersey State Potato Association was a discussion of the ways and means to bring about a better situation for potato growers in New Jersey. The association requested the Governor in his annual budget to the Legislature to add an item of not less than \$5,000 appropriated to the Division of Agricultural Economics at the State Experiment Station, in conjunction with the Department of Agriculture, to go into a study of the economic production and marketing of New Jersey potatoes.

Annual meetings of the New Jersey State Poultry Association, Guernsey and Holstein Breeders' Associations, Beekeepers and Dairywomen were held during the week. Considerable interest was shown in the activities of the Poultry Association in its efforts to boost New Jersey eggs, and to bring about better prices for members by the further stabilizing of their product and the placing of it on the market in uniformly labelled cases.

DIBBLE'S D. B. Brand ALFALFA, CLOVER and TIMOTHY SEED

99.50 Pure or Better is the highest grade obtainable

American grown, carefully tested in our own laboratory for purity and germination and sold direct to you under our famous ten-day-money-back-if-you-want-it guarantee, subject to any test you choose to make.

Our special Freight Paid proposition fully explained in our catalog tells you just what the seeds will cost delivered to your station.

You ought to have one. It gives the details on all Farm Seeds. Complete instructions for Soy Beans—Alfalfa—Field Peas—Pasture Grasses—Grain, etc. Offers Maine Potatoes. We'll gladly send Seed Samples. Mention this paper. Write us today.

Seed Oats

7 kinds—'side' and 'tree' types. All good yielders. Clean, heavy seed. "Shadland Climax" very unusual sort—yielded 100 bu. per acre. Hardy stiff straw. Let us send samples. FREE.

Corn 10 kinds. Ensilage and husking types. Heavy producers. High germination. Satisfaction guaranteed.

A. H. Hoffman Inc. Landisville, Lancaster Co., Pa.

Certified Blue Tag Seed Potatoes

You should use them because—

They have passed three inspections by specialists from Cornell.

They are guaranteed to be healthy, vigorous and free of varietal mixture.

The average of all diseases found on both field inspections was less than 1½ percent.

Actual use of the seed has shown a large increase in yield over local seed.

Machine graded and hand sorted to contain only sound tubers weight 2 to 12 ounces.

Packed in even weight sacks, holding 8, 10, 11 pecks as ordered.

We have an established reputation for fair dealing based on 8 years of business practice.

The Blue Tag on every Bag is your protection against inferior seed. Write for attractive prices on the 10 Standard Varieties. Tell us the quantity you need and the variety you prefer.

N. Y. Coop. Seed Potato Ass'n, Inc. 500'Byrne Bldg., Syracuse, N. Y.

With prices where they are, only a bumper crop can make the farm pay a good return this year—and the first essential of a big profitable harvest is Hardy, Big-Yielding, Michigan-Grown

Isbell's Seeds "As They Grow Their Fame Grows" TRADE MARK

Your name and address on a post card will bring you this valuable book—this Guide to Better Crops. It describes the best in seeds—gives cultural directions—shows how Isbell seeds are grown and quotes direct prices. It is one of the most helpful catalogs in America. And samples showing quality of Field Seeds in which you are interested will be sent free on request. Send today—It's Free.

Every farmer should know about Hubam. Our seed is cleaned and certified, absolutely dependable. Prices lowest yet. Write for FREE SAMPLES and 116-page catalog describing this wonderful crop. We carry a complete stock of all seeds.

Seeds for Testing

A. A. Berry Seed Co., Box 1015 Clarinda, Iowa

Get to market early

The early truck brings the top prices. The use of 1000 pounds of complete fertilizer to the acre will frequently add as much as \$100 an acre to the value of the crop, because it will not only increase the yield per acre, but will hasten the maturity of the crop, and bring it on the market earlier than otherwise. There are two things to remember: first, pin your faith to a reliable old brand like Royster's; and second, use a complete fertilizer in large enough quantities per acre to insure worthwhile results.

For helpful information about fertilizer, write freely to F. S. Royster Guano Co., Baltimore, Md.

ROYSTER

Field Tested Fertilizers

SOLVAY brings better, greater crops the first harvest. **SOLVAY** makes sour soil sweet and releases all fertility the land contains to hasten growing crops to full maturity.

Most farm lands need lime, and none is better than Solvay Pulverized Limestone—high test, non-caustic, furnace dried, and ground fine to spread easily.

Every farmer should read the Solvay Booklet on Liming—sent FREE on request.

THE SOLVAY PROCESS CO., Syracuse, N. Y.

LIME THE PURSE

Allen's Book of Berries for 1923

If interested in making more money from your farm or lot and more health and pleasure from your garden, you should have a copy of this book. It tells all about growing STRAWBERRIES, the most delicious of fruits. For years they have been the leading CASH CROP wherever grown.

This Book of Berries gives simple understandable information about how and when to plant, how to prepare the land, and what varieties to grow for best results. Good plants, true-to-name, the best you can buy, are fully described and reasonably priced.

The information and descriptions are dependable, based on 38 years experience in growing, selling Strawberries and Strawberry Plants.

It is the most complete book of its kind—thoroughly reliable. It's free to any one interested. Write for copy today.

How Eggs Are Graded

Definition of Quotation Terms—Herschel H. Jones

THE time is coming when the terms used to describe the various grades of eggs will be uniform on all markets in the same way that standard grades of potatoes have come to be accepted quite generally. Until that time arrives, however, the established trading agencies will continue to regulate the requirements on size, quality, color and weight of eggs which make up the various market grades. Even in New York City, which is the largest egg market in the country, there is a certain amount of discrepancy in the classification of the various grades of eggs, but traders turn generally to the egg rules laid down by the New York Mercantile Exchange and quote their prices according to the classification which the Exchange has in effect for its members.

In the American Agriculturist market reports and in the various daily and weekly papers which come to the farmer appear such terms as fresh gathered, hennerly whites, nearby gathered firsts, etc. There are three distinct phases of the classification. Terms descriptive of the geographical origin of the eggs appear first—New York State, western, or nearby, the latter referring to eggs which are produced within a few hours' express haul of the market quoted. Then, the eggs are described by terms which indicate the age of the eggs—fresh gathered, held fresh, hennerly, refrigerator and storage eggs. Next, they are classified according to the quality of the eggs.

The geographical description is self-explanatory. Under the classification according to the age, the New York Mercantile Exchange defines the classes as follows:

Fresh Gathered—Eggs which arrive at the market from producers without retention at any point beyond the time necessary for rehandling or for obtaining the usual unit of shipment.

Hennerly Eggs—Those which meet the qualifications above for fresh gathered eggs, but, in addition, those which reach the market directly from the poultry farmer or fancier upon whose premises they are produced.

Held Fresh—Eggs which do not meet the above requirements, but which have not been preserved and which have not been held so long as to come under the branding required by law for cold storage or refrigerator eggs.

Refrigerator Eggs—Those which have been held in cold storage under such conditions as require their branding as such according to federal or state law.

Color—Eggs marketed without color description are assumed to be "mixed" eggs, according to the trade. White eggs are those of which 95 per cent must be chalk white if extras, and 85 per cent chalk white if in the other grades. Brown eggs must be 95 per cent uniform brown if extras, and 85 per cent uniform dark brown if in the other grades.

Grading Within the Classes

Within these classes just described, eggs may be of varying quality, and are described as Extras, Extra Firsts, Firsts, Seconds, Number 1 and 2 Dirities, and Number 1 Checks. Applying these terms, the following definitions are accepted by the trade.

Fresh Gathered Extras—Those packed in new or standard 30-dozen egg cases, which from January 1 to May 14 each year shall have at least 90 per cent clean, fresh, reasonably full, strong, sweet eggs of an average weight of 46 pounds net. Other than loss, the other 10 per cent may be defective in strength or fullness, but must be sweet. The dead loss in bad eggs must not exceed three eggs per case and the total average loss not more than one dozen per case. Between May 15 and December 1, the 90 per cent requirement is reduced to 80 per cent, the dead loss in bad eggs increased to six eggs and the total average loss to 1½ dozen per case.

Extra Firsts—As above except that the 90 per cent requirement is reduced to 75 per cent, and the 80 per cent requirement to 65 per cent. The net average weight must be 44 pounds or

over. The total average loss may be two dozen per case, but of that loss not more than nine bad eggs.

Fresh Gathered Firsts—As above except that the percent requirements are 65 and 50 per cent, respectively. The net average weight must be 43 pounds. The dead loss in bad eggs may be one dozen per case and the total average loss two dozen per case, except between July 1 and August 15, when a dead loss of 1½ dozen and a total average loss of three dozen per case is allowed.

Fresh Gathered Seconds—As above except that the requirements are lowered to 50 per cent and 40 per cent, respectively. The net average weight must be 41 pounds. The average loss is increased to three dozen per case, but of this the loss in bad eggs must not be more than eighteen eggs per case.

Similar requirements within the various classes are made for storage and refrigerator eggs which, of course, are taken care of by the dealers and cold storage men.

(Continued from page 69)

Plant Industry Building which will adequately provide for the Department of Plant Pathology, and the Secretary of this Society is hereby directed to send a copy of this resolution to Governor Smith, the Chairman of the Senate Finance Committee, the Chairman of the Ways and Means Committee, and the Officers of this Society are directed to use their best efforts toward this end.

Endorses Committee of 21

WHEREAS, the committee of twenty-one have made a careful and painstaking study of the Rural School System of New York State, and WHEREAS, the committee are making recommendations for changes in the School Law of the State, based on their findings, therefore, be it

Resolved, the New York State Horticultural Society indorse the work of the committee of twenty-one and urge further efforts to acquaint our people with its findings and its recommendations.

WHEREAS, the system of taxation for school purposes rests unevenly on many districts, making it very difficult to maintain adequate schools, and

WHEREAS, a new law is to be passed by the coming session of the Legislature, therefore, be it

Resolved, that the General Conference Board recommends a state-wide system of taxation, making the burden bear equally throughout the State.

WHEREAS, the Horticultural interests of the State are entitled to a new building on the State Fair Grounds the present year, and

WHEREAS, the State Fair Commission has unanimously agreed to use its influence to that end, therefore, be it

Resolved, that the New York State Horticultural Society hereby appreciates the action of the State Fair Commission and petitions the present Legislature to appropriate a sum of money sufficient to build and equip a suitable Horticultural Building; and that a copy of this resolution be sent to the Chairman of the State Fair Commission, also Governor Smith, the Chairman of the Assembly Ways and Means Committee and the Chairman of the Senate Finance Committee.

WHEREAS, the New York State Fair's Governing Board as now constituted consists of seven members, namely President of the Senate, Commissioner of Farms and Markets and five persons appointed by the Governor, by and with the consent of the Senate, for a term of five years, one being appointed annually, hence the member's term expires each year; and

WHEREAS, the New York State's Horticultural interests have no representation on this commission, therefore, be it

Resolved, that it is the earnest desire of this Society in annual session assembled that Governor Smith be asked to appoint an active Fruit Grower on the New York State Fair Commission.

WHEREAS, the Gypsy Moth is entering New York State along an extended front and if allowed to spread may necessitate huge sums for control work and cause enormous losses in addition, and

WHEREAS, the practicability of exterminative and control work has been demonstrated, therefore, be it

Resolved, that the New York State Horticultural Society record itself in favor of the State of New York, in cooperation with the Federal Government, establishing a barrier zone in the Hudson Valley and its natural extensions beyond which this pest shall not be allowed to become established.

WHEREAS, the existing law which forbids persons under eighteen driving an automobile unless accompanied by an older person results in serious hardship to students attending high school, therefore, be it

Resolved, that the New York State Horticultural Society goes on record as favoring a modification of the existing law to the end that provision be made under proper restriction, after passing chauffeur's examination, for competent persons under eighteen to be granted a permit to drive a car for purposes of attending school.

WHEREAS, under the present law the cost of building and maintaining bridges on the State and county highways is now born by the towns thru which these roads pass, thereby placing an unjust burden of taxation on these towns, therefore, be it

Resolved, that the New York State Horticultural Society goes on record as favoring a change in the law requiring the cost of building and maintaining these bridges, to be paid from the same source that builds the roads.

WHEREAS Governor Smith has declared his intention of recommending to the Legislature drastic changes in the Agricultural Law of the State with a view toward improving the work of the Agricultural Department, therefore, be it

Resolved, that the New York State Horticultural Society will heartily cooperate with the Governor in any changes he may suggest that will, in the judgment of the General Conference Board, improve the existing condition in the Department and increase its efficiency—EDITOR'S NOTE—It was stated at the meeting that this resolution is not to be interpreted to mean that the Horticultural Society believes that radical changes in the Department are needed.

Farm Machinery—Give every implement and machine a careful inspection sometime this month, or next, so that everything may be in readiness for the coming season. Replace old, rusted, or broken parts with new, reliable pieces. A little forethought often prevents costly delay. Use the oil can, the grindstone and the tool kit.

The Best Truck for the Farm

For general farm use, on hard roads or in rough fields, the Model K-16 one ton GMC provides more pulling power, more speed, and more economy than other trucks of the same capacity.

Moreover, this "Jim-Dandy" truck is built from truck parts exclusively—no passenger car parts used. Consequently it has the sturdiness and enduring performance that is demanded for hauling over all kinds of roads and in all kinds of weather.

The exclusive features of GMC construction, developed from more than ten years of successful truck building, have provided this truck with more continuous performance and lower operating and maintenance costs. Due to its advanced design there is not a single wearing part in this truck that cannot be replaced. Such refinements as Removable Cylinder Walls, Removable Valve Lifter Assemblies, Pressure Lubrication, and Instantaneous Governor action all give to this truck the dependability that is so vital in farm trucking.

In every detail of construction the Model K-16 has been built according to the most approved and most advanced practices.

Magneto ignition, electric lights and starter with conduit wiring entirely separate from the ignition wiring, radius rods, thermosyphon cooling, oversized brake drums, interchangeable brake rods, complete instrument board, pressure chassis lubrication, cord tires—

All these are universally accepted as the best for motor truck use—all these are standard in this GMC.

Measured by any standard this one ton truck has no superiors—and its cost, considering its quality, is much lower.

Write for an illustrated booklet, "Motor Trucks on the Farm."

Hand vs. Machine Milking

Do Milking Machines Save Labor?—H. E. Babcock

WE have used milking machines for three years. During that period we have had little opportunity to check them against hand labor until this year. Now we feel that we have a pretty definite test of the machine against hand labor.

Last year we began to milk a bunch of grade Holsteins three times a day. These cows were by themselves on a farm where we could accommodate only one milker. Not knowing just what a man could stand in the way of hand milking heavy-producing cows three times a day we had to feel out the situation.

Accordingly we started off with twelve cows fed and milked at 5 A. M., 1 P. M., and 8 P. M. Handled in this way the cows averaged sixty pounds apiece. For the first few weeks our man handled the job very well and took care of some other stock besides.

Then he began to show signs of cracking. He overslept, or he had a headache. Plainly he was overworking and undersleeping. From one cause or another about that time we lost three cows from the bunch, reducing the number to nine head. This number our man handled without difficulty, and with the few other chores he did and the exacting schedule of feeding and care to which we held him, nine cows were about all he could well care for, milking by hand three times a day.

One Man, Eighteen Cows

This fall we needed to produce more milk, so we started off with eighteen grade Holsteins, milked three times a day by one man using a milking machine. So far—and we have now had a three months' trial—we have found this combination practical.

Our man uses one double unit machine and with this machine he milks two cows while he strips two. Working in this way, it takes him no longer than it did last year to milk nine head by hand, and we are convinced that it does not take nearly so much out of him. The cows are doing practically as well as last year, the entire herd having averaged 55 pounds a day production, and we have had no udder trouble.

Strange as it may seem, with the fatigue of hand milking removed, the herdsman has been able to care for the other nine head, including feeding, grooming and stable cleaning, about as easily as he cared for the twelve head last year.

Based on our experience to date, it would seem that one man using a milking machine can milk and care for eighteen cows three times a day about as comfortably as he can milk nine head by hand.

The Drawbacks

The biggest practical objection to the machine, as we use it, comes from the loss of individual production records. Without these the best feeding cannot be done. It is true we might use single unit machines, but if we did, we could not handle so many cows. We, of course, get the figures on the herd production and make an occasional check-up on individuals, but on the whole, machine milking becomes wholesale milking with the individual cow merged in the herd and her identity lost. And this, of course, is always objectionable.

CLEAN MILK WITH A MILKING MACHINE

I have read in the American Agriculturist that Dean Cook uses a milking machine in producing certified milk. We do not make certified milk,

but we do keep our bacteria count below 10,000—oftentimes when our bottled milk is delivered the bacteria count is only 3,000 or 4,000—and we, too, use a machine.

I don't know what Dean Cook thinks about it, but from our experience we believe that altogether too much has been said of the comparative merits of machine and hand milking in obtaining a low bacteria count. If a machine is kept clean—and we know of no better way to keep it clean than to follow the advice of the College of Agriculture—

it becomes an unimportant factor as far as bacteria count goes.

The real crux of the clean milk question is a clean, dry utensil, and a quick and thorough cooling. If these last two essentials are kept in mind half—yes, two-thirds—of the precautions and rules and regulations for producing clean milk, could well be forgotten.

In practice we strain our milk directly from the machine pails into 40-quart cans. These cans, after the usual washing and steaming, are always dried by inverting on a rack outdoors. As soon as a can is full, and in very hot weather before it is full, it is set in a tank of ice water, and the milk is then occasionally stirred until cool. Later it is bottled and the cases of bottles immersed in tanks of ice water with cracked ice shoveled over the tops of the cases.

Handled in this way, it is easy to deliver bottled milk with a bacteria count below 10,000. In fact, we have been doing it for three years now.

COOLING TANKS THAT WASTE ICE

Last winter, as usual, we filled two large ice houses with what we supposed would be ice enough to last us through the year. Early this fall we woke up to the fact that our supply of ice was practically exhausted.

When we began to buy and haul ice we soon found the expense and labor involved quite staggering. In our endeavor to eliminate the possibility of such an expense again, we had almost decided to build another ice house, when a chance visitor called our attention to our cooling tanks.

These were concrete vats sunk halfway in the ground, and with the rear side, a wall banked by earth after the manner of a bank barn. Apparently this sort of arrangement made an ideal conductor of heat, the warm earth back of the wall keeping it warm all summer in spite of our heroic and expensive efforts to keep it cool with ice on the other side.

Previous experiences with concrete cooling tanks had been quite satisfactory, but none of these had been banked by earth. As soon as we discovered what was taking the ice, we began to use wooden cooling tanks, and thereby cut our ice consumption by 50 per cent. Needless to say, we are through with concrete cooling tanks.

Feeding Ewes—An open winter may lead sheepmen to allow their flocks to depend too much upon pasturage for maintenance. Do not overlook the fact that the ewes will soon be lambing and should be sufficiently nourished to insure a proper milk flow. Supplement pasture with grain feed of corn, oats and bran. In the northern tier counties two parts buckwheat, three parts oats and one part bran or oil meal may be substituted.

The kind of an udder to look for carried by a first prize winner at the New York State Fair. Equally adapted to easy machine or hand milking

League Announces Milk Prices for February

THE Dairymen's League Cooperative Association, Inc., has voted the following prices for the month of February, on the basic butter-fat test of 3 per cent, in the 201-210-mile freight zone, from New York City:

Class 1, for fluid consumption, \$2.90.

Class 2, for cream or ice-cream, \$2.50.

Class 3-A milk used chiefly in the manufacture of evaporated condensed and powd red milk—a differential has been voted at 59 cents per 100 above the price paid for milk going into the manufacture of butter (in Class 4). For Class 3-B milk used chiefly in the manufacture of hard cheese a 40-cent differential was voted.

Class 4 milk used chiefly in the manufacture of butter and American cheese was voted to be determined by New York market quotations of butter and cheese respectively.

January prices were reduced to \$2.90 for class 1 and \$2.50 for class 2, beginning January 16, due to seasonal increase and competitive conditions in the New York market. It is looked upon as the opening of another milk-price war.

Urge Extension of T B Work

(Continued from page 66)

pointed out that the period of depression had about ended and that the prospects were encouraging.

H. J. Henry, Bureau of Animal Industry, Department of Farms and Markets, gave an excellent review of the growth of the accredited herd plan in New York State. According to Mr. Henry, there are at present 12,000 herds, comprising 315,000 cows under State and Federal Supervision.

Henry Morgenthau, Jr., spoke on the present delay in compensating the farmer for his condemned cattle under the accredited herd plan. Mr. Morgenthau stated that as it is now, the breeder often has to wait from six to eighteen months before the State reimburses him, and that of the two million cattle in New York, only 315,000 are under Federal Supervision. Appropriation by the State of sufficient money to pay the farmer within 30 days after the cattle were slaughtered, would, according to the speaker, give such an impetus to the campaign to eradicate tuberculosis, that within five years the whole State of New York would have adopted the "area plan," with every cow in the State under Federal and State Supervision.

Moreover, Mr. Morgenthau said that he could prophesy, if this occurred, that the State would acquire such a reputation for healthy cattle, that the value of the pure bred would increase over 50 per cent. He also stated that this was a matter which interested not only the farmer, but also the cities, as every child in the State of New York should be entitled to receive milk from tuberculosis-free cattle. In closing, Mr. Morgenthau urged that the association go on record as requesting the administration to appropriate sufficient funds not only to pay up back debts, but also to carry on for at least six months in 1923.

Senator William Byrne of Albany County wound up the program by urging the farmers to make known their demands and seek to get what is rightfully theirs.

On the following day, January 17, a sale was held at which 73 head brought an average of \$175 a head.

In the evening, the Onondaga Holstein Club gave a smoker to the State Association. At this meeting, the following very important resolutions were recommended by the pure-bred breeders and passed by the association.

WHEREAS, the eradication of tuberculosis is of vital importance to the pure-bred cattle industry,

WHEREAS, the work of eradication has been seriously handicapped by lack of sufficient State and Federal funds;

Therefore, be it resolved that we urge the legislature to make an emergency appropriation sufficient to pay all indemnities now due and that a sufficient amount also be appropriated to pay indemnities to July 1, 1923, and be it further resolved, that we endorse and commend the activities of the Bureau of Animal Industry in work of tuberculosis eradication and that the same be continued.

G. L. F. Complete Feed Service

FOR ALL FARM ANIMALS AND POULTRY

THE G. L. F. is now manufacturing and will ship in any assortment, a complete line of public formula ready mixed rations for all farm animals and poultry. Each ration has been recommended by the feeding experts at the colleges of agriculture in the territory served by the G. L. F. They represent the very latest scientific and practical feeding knowledge.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

REAL RED REDS, Single Comb, purebred, deep, rich, red, vigorous Cockerels and Pullets; three, four, five dollars; satisfied customers. **MEADOWBROOK FARM**, Route 3, Box 210, Lancaster, Pa.

MANY VARIETIES—Pure Bred Poultry, Baby Chicks and Pigeons at low prices. 100 page book in colors describes them. Mailed for 5 cents. **FRANK FOY**, Box 14, Clinton, Iowa.

REDS—Single Comb Rhode Island Reds. Harold Tompkins and Mahood strains. Satisfaction guaranteed. Prices right. **W. D. HUTCHISON**, Claysville, Pa.

HATCHING EGGS, from Pure Bred, Reds, Rocks, Minorcas, Leghorns, Anconas. Fine breeding males reasonable. **L. D. CLARK**, Binghamton, N. Y.

STOCK EGGS—Chicks White Leghorns, Reds, Black Minorcas, White China Geese, prices reasonable. **BROOKSIDE FARM**, Key-mar, Md.

COCKERELS—Golden and Silver Wyandottes. Good ones \$2.50 each; extra good \$3.50 each. **J. L. HOAK**, Spencerville, Ohio.

TOULOUSE GEESE, ROUEN DUCKS. Grey Call Ducks, Pearl Guineas. **CRANE BROOK FARM**, Port Byron, N. Y.

WHITE WYANDOTTE COCKERELS. Mammoth Pekin ducks. Pearl Guinea. **LAURA DECKER**, Stanfordville, N. Y.

S. C. BUFF ORPINGTON COCKERELS. Exclusively Poertuer strain sturdy farm raised. **I. B. ZOOK**, Ronks, Pa.

BROWN LEGHORN COCKERELS. Tormohlen overlay strain. **SUNNYSIDE FARM**, Emporium, Pa.

PARDEE'S PERFECT PEKIN DUCKLINGS. Eggs, catalogue. **ROY PARDEE**, Islip, N. Y.

LARGE AYLESBURY DUCKS; pairs \$7. **M. V. CALDWELL**, Lisbon, Ohio.

BUFF ROCK COCKERELS. **EDGEWOOD FARM**, Ballston Lake, N. Y.

BARRON—Young, laying Leghorns. **EL BRITON FARM**, R. 1, Hudson, N. Y.

TURKEYS

TURKEYS BLACK AND BRONZE. The big, husky hardy ones. Toms \$9.50 to \$12.50. Hens \$7.50 to 9.50. A few fine first prize winning Pekin duck—both sexes at \$3 each. Several wild Mallards at \$2.50 each. All very fine stock. **ROCK-CLIFF FARM**, Brogueville, Pa.

TURKEYS—Hens and Toms—with size and quality. Pairs and trios no akin. Mammoth Bronze, Bourbon Red, Narragansett, White Holland, write, **WALTER BROS**, Powhatan Point, Ohio.

MAMMOUTH BRONZE TURKEYS. Toms and Hens. **F. B. GARNSEY**, Clayton, N. Y.

MAMMOUTH BRONZE TOMS. **LAURA DECKER**, Stanfordville, N. Y.

TOBACCO

HOMESPUN TOBACCO. Chewing, 5 pounds \$1.75; 10 pounds \$3; 20 pounds \$5. Smoking, 5 pounds \$1.25; 10 pounds \$2; 20 pounds \$3.50. Send no money, pay when received. **COOPERATIVE TOBACCO GROWERS**, Paducah, Kentucky.

NATURAL LEAF TOBACCO. Chewing, 5 pounds \$1.75; 10 pounds \$3; 20 pounds \$5. Smoking, 5 pounds \$1.25; 10 pounds \$2. Pay when received. **TOBACCO GROWERS' UNION**, Paducah, Ky.

BEES

HONEY—Strictly pure, first quality, extracted clover-basswood. 10 lb. pail \$1.75; 5 lb. pail 90 cents delivered anywhere. **THOS. BRODERICK**, Moravia, N. Y.

PURE HONEY—Circular free. **ROSCOE F. WINSON**, Dept. A, Dundee, New York.

DOGS AND PET STOCK

FARM DOGS—English shepherds, pups and grown dogs, guaranteed heel drivers, natural instinct to handle cattle. Credit given if requested. **W. W. NORTON**, Ogdensburg, N. Y.

FLEMISH GIANT RABBITS, Exclusively. **T. A. WILSON**, Marion, N. Y.

PEDIGREED COLLIE PUPS. Grown dogs. **EL BRITON FARM**, R. 1, Hudson, N. Y.

COLLIE PUPS **PAINE'S KENNELS**, South Royalton, Vt.

CATTLE

BULL CALF—15 Registered, short horns. Will exchange for Guernseys. **ALEX. FISHER**, Madrid, N. Y.

Your Market Place

This is **YOUR Market Place**. It helps you to sell, buy, rent or exchange; to secure farm help or to find work. The address must be counted as part of the advertisement, and each initial or number counts as a word. Because of the low rate to subscribers and their friends, cash must accompany your order. Copy must be received by Monday to guarantee insertion in the following week's issue. Phrase your wants, as others have secured your interest, by following the style of the advertisements on this page. Classified advertisements are inserted at the rate of five cents a word per insertion; no single advertisement accepted for less than one dollar. Address all communication to:

American Agriculturist, 461 Fourth Avenue, New York City

REAL ESTATE

FOR SALE—163 acre dairy farm. Beautiful location Central New York. Prime alfalfa. Ample pasturage. Well watered. Excellent market facilities. Good buildings. Timber. Must sell immediately to close estate. Easy terms. First reasonable offer buys. For complete information write, **D. A. EMBURY**, 30 Broad Street, New York City.

SITUATIONS WANTED

FARM MANAGER OR SUPERINTENDENT open for engagement about February 1. Nine years executive experience. Familiar with large operations. Experienced in handling men and machinery, care and management of livestock and poultry, cow testing, orcharding, general farm crops drainage and marketing. Would like to hear from those having first-class business proposition. Address box **B. K. AMERICAN AGRICULTURIST**, 461 Fourth Avenue, New York City.

DEPENDABLE MARRIED MAN wants position on farm April 1 to Oct. 1. Will renew yearly if agreeable. Experienced in general farm work, including tractor and milking machine. Good references. **E. B. BLEECKER**, Andover, N. J.

MALE HELP WANTED

ALL men, women, boys, girls, 17 to 60, willing to accept Government positions, \$117-\$190, traveling or stationary, write **MR. OZMENT**, 258 St. Louis, immediately.

FEMALE HELP WANTED

LADIES WANTED everywhere who write plainly or use typewriter; other opportunities. **WORKERS' SERVICE CO.**, Dep't. 82 Jacksonville, Florida.

WOMEN'S WANTS

ALL WOOL KNITTING YARN for sale, from manufacturer at 95c, \$1.35 and \$1.60 a pound. Postage paid on \$5 orders. Free samples. **H. A. BARTLETT**, Marmony, Maine.

PATCHWORK—Send fifteen cents for household package, bright new calicos and percales. Your money's worth every time. **PATCHWORK COMPANY**, Meriden, Conn.

AGENTS WANTED

AGENTS—Our soap and Toilet article plan is a wonder. Get our free sample case offer. **HO-RO-CO.**, 177 Locust St., St. Louis, Mo.

RAW FURS AND TRAPPERY

WE SOLICIT LARGE AND SMALL country consignments of beef, horse hides and kindred lines. Prompt and fair returns. Write for tags. **PENNSYLVANIA HIDE & LEATHER COMPANY**, Scranton, Pa.

SELLING SILVER FOXES—\$5 monthly. **SILVERBAR ASSOCIATION**, 143e, Dracut, Mass.

MISCELLANEOUS

FOR SALE—5 H. P. Pulaski Boiler and a 1,350 lb. De Laval Turbine separator, good condition, used every day. Putting in an electric outfit. Also an 8 H. P. Pulaski Boiler with engine complete, nearly new. Sell cheap. **S. C. PENDERGAST**, Phoenix, N. Y.

\$15 TO \$25 WEEKLY—At home on sewing machine; making cloth working gloves; complete instruction and pattern, 25 cents. **HOME SUPPLIES**, Box 1583, Pittsburgh, Pa.

LATEST STYLE SANITARY MILK TICKETS save money and time. Free delivery. Send for samples. **TRAVERS BROTHERS**, Dept. A, Gardner, Mass.

ALFALFA, mixed and timothy hay. Have seven cars, shipped subject inspection. **W. A. WITHROW**, Route Four, Syracuse, New York.

PRINTING—1,000 envelopes, noteheads or cards \$2.75 postpaid. Samples and price list free. **ANDERSON PRESS**, Beacon, N. Y.

FERRIS—Get our free booklet and pre-war prices on sound healthy Ferris. **W. A. JEWETT & SONS**, Rochester, O.

BEST EXTENSION LADDERS made 23 cents per foot. Freight paid. **A. L. FERRIS**, Interlaken, N. Y.

MILK TICKETS a specialty. Samples free. **BONDS PRESS**, Middletown, N. Y.

SEEDS AND NURSERY STOCKS

SEED POTATOES—Russet Rural Variety. Selected twelve years. **FAIRACRES POTATO FARM**, E. R. SMITH, Specialist, Kasoag, N. Y.

SEED POTATOES, Dibble Russet, raised from certified stock. **C. B. GEIGER**, Saegersville, Pa.

Order Cars Early

A very good point was made recently by T. E. Cross, President of the New York State Horticultural Society. Mr. Cross, who has had long experience in shipping perishables, states that huge losses are sustained every year by shippers of perishable fruits and vegetables, because they fail to anticipate their refrigerator car requirements.

"When the members of a community order a large number of cars to be placed for loading on short notice to the carrier serving them, it is highly probable that these requests cannot all be filled. The result is that some of the produce must go to waste," says Mr. Cross. "During the summer of 1920, at a time when hundreds of carloads of choice peaches were rotting under the trees in western New York because of a shortage of refrigerator cars on the New York Central lines, peaches were selling at two and three dollars a bushel in New York City and were hard to get even at that figure. All this time there were hundreds of refrigerator cars on the sidetracks of the Pennsylvania lines, ordered by shippers of other produce and held there for shipments of later fruits and vegetables."

"Now had the peach producers anticipated their car requirements and placed their requests for same with the New York Central lines early, as did the shippers on the Pennsylvania, two calamities would have been averted: First, they could have marketed their peaches, which rotted for want of car supply; secondly, the consumers in New York City would not have been compelled to pay the exorbitant prices which were charged because of a scarcity of the fruit at that point."

This suggestion is brought to our attention by the newly established Traffic Bureau of the State under the direction of Francis W. Brown. This new bureau has its headquarters at Albany, and is ready and anxious to be called upon by the shippers of farm produce throughout the State. It is the belief of the Traffic Bureau that cooperation between the shipper and the railroad will eliminate trouble for both, and the offices of this new agency are anxious to give all possible sorts of service concerning express or freight rates, classification, claims, routes, etc., to the farmers of the State.

"\$18.25 RECEIVED

The notation which the Service Bureau placed at the top of the correspondence regarding the case of Mr. Howard A. Wolfe, Gainesville, N. Y., is to the point—" \$18.25 received."

Mr. Wolfe had shipped 73 pounds of broilers to a Rochester firm, but heard no further from the buyers. He wanted to pay collection costs, but since the Service Bureau makes no charge he extended his subscription for five years instead.

HURRYING UP A PREMIUM

A premium which had been held up for two months in spite of repeated requests that it be sent, finally reached the grandson of one of our subscribers three weeks ago. The boy had sold a

Improving the Crystal Set To "Tune Out" Interference of Undesired Stations

SOMETIMES a receiving outfit will be located near commercial and amateur stations from which considerable interference will be experienced. The simple equipment described in last week's American Agriculturist is suitable for open locations, although it is not sufficiently selective for city use, as a rule. In New York City there are broadcast programs being sent out on 360 and 400 meters at the same time, and builders of single coil sets have found it almost impossible to "tune out" or eliminate the unwanted station.

Should the builder of the set shown in Figure 1, shown in the American Agriculturist of January 20, be troubled by such interference, it is but a step to the arrangements of figure 3. The tuning coil, without any change, now becomes the "primary coil." It consists of a cardboard tube, such as an oatmeal container, measuring 3½ to 4 inches in diameter, tightly wound with a layer of No. 20 enamelled magnet

The remainder of the set is the same as the corresponding portion of figure 1. The mounted crystal is held in a spring clip which is screwed down to the wooden base, while the "cat-whisker" is held by a binding post and machine screw. The cat-whisker wire should be sharpened at its end, and it will be found that the proper pressure upon the crystal will vary with the nature of the mineral used. It is best to pay from 35 to 50 cents for this, since results depend largely upon its sensitivity. No. 18 bell wire is used for connections, with the insulation removed where contact is made. It is advisable to solder twisted joints to insure permanent contact. The phone condenser is supplied in various forms, and should have a capacity of about .001 micro-farads (mfd.).

Tuning the Two Circuit Set

The tuning of this two-circuit set is not complicated. First, the secondary coil is placed about half-way inside the

Figure 3. A simple crystal set with secondary coil

wire for a length of 2½ inches. A spring brass arm is mounted on a brass angle to make continuous contact over a sandpapered arc on its surface.

A similar cardboard tube, about 3 inches long, although ½ inch smaller in diameter than the primary, is used for the "secondary." This is carefully wound with 45 turns of the same size enamelled wire, with the ends secured in small holes, punched at the extremities of the layer of wire. Flexible leads, such as is used for lamp cord, is employed to make connections from ends of the secondary. If a cardboard box, such as a salt container, is employed for the secondary, the cover may be left on, and the flexible leads brought through two holes in that. Figure 3 shows by dotted lines, the course of the flexible wires inside the secondary. This added coil makes it possible to get rid of or "tune out" undesired messages.

The Variable Condenser

In addition to tuning the primary or aerial circuit with the slider, there must be some form of tuning the secondary. This is done with a variable condenser, an instrument having two sets of interleaving metal plates, one set movable by an exterior knob. The more the plates are interleaved, the greater is the capacity of the condenser, in just the same way as the capacity of the aerial increases when the aerial wires are brought near the ground.

Variable condensers are usually referred to as "23 plate" or "43 plate" although this is not a true indication of their electrical size. Capacity is measured by a unit called the "micro-farad." The condenser which should be used for tuning this particular secondary circuit should have an approximate capacity of .0005 micro-farads. It may not look exactly like the one shown in figure 3, but it will have two binding posts which should be connected to the secondary and to the detecting circuit as indicated.

primary. The variable condenser is set at about mid-scale, and the cat-whisker brought down upon the crystal in various spots to locate a sensitive place while the slider is varied. When a broadcasting station is picked up, the detector should be adjusted for maximum strength, and left. Next the secondary should be moved out of the primary—which operation is termed "loosening the coupling"—and both slider and variable condenser adjusted. Extreme selectivity will occur when the secondary is all the way out and perhaps turned at an angle to the primary. The strength will decrease somewhat, and an intermediate position is found which permits little interference and gives plenty of audibility or sound.

The lower portion of figure 3 is devoted to the schematic representation of the pictured set. Symbols used should be learned in relation to their actual appearance, for all the parts shown except the detector are included in the make-up of tube sets. Next week the vacuum tube will be introduced to the readers. It will be in a simple but effective form, with a total cost of about \$20, and with a receiving radius that will often approach 1,000 miles.

When Buying Radio Supplies

When ordering radio supplies from mail order catalogs, or when purchasing from a radio dealer, it is always advisable to select parts made by a manufacturer who has sufficient faith in the quality of his goods to place his name on them. This is particularly true with the crystal, the condensers and the head telephones. The latter should be stamped with a resistance of at least 1,000 ohms per phone, and will cost from five to nine dollars. The sensitivity will vary somewhat in accordance with the price, and it is possible to secure unusually good ones for ten or twelve dollars. Since these latter instruments are used later on in more advanced outfits, it is certainly advisable to buy the best.—BRAINARD FOOTE.

Whatever else may fail

Linking city, village and farm, crossing mountain and wilderness, the telephone system challenges Nature in her strongholds and battles her fiercest moods.

Out on his lonely "beat" the telephone trouble-hunter braves the blizzard on snow-shoes, body bent against the wind, but eyes intent upon the wires.

North, south, east, west—in winter and summer, in forest and desert—the telephone workers guard the highways of communication. Traveling afoot where there are no roads, crawling sometimes on hands and knees, riding on burros, or motorcycles, or trucks, they "get there" as they can.

When Nature rages to that point where few things can stand against her, when property is destroyed and towns cut off, the telephone is needed more than ever. No cost is too much, no sacrifice too great, to keep the wires open. If telephone poles come down with the storm, no matter how distant they may be, no matter how difficult to reach, somehow a way is found, somehow—in blizzard, hurricane, or flood—the service is restored.

Whatever else may fail, the telephone service must not fail, if human effort can prevent it. This is the spirit of the Bell System.

The Valley of the Giants—By Peter B. Kyne

THE fight is on! Bryce Cardigan, son of the blind old pioneer of Sequoia takes up his father's battle against the unscrupulous Colonel Seth Pennington, a newcomer in the redwood country. In doing so, he sacrifices his starting friendship with Shirley Sumner, the Colonel's niece.

A visit to the rival camp to thrash Rondeau, a woods-boss who has felled a tree in the Valley of the Giants, old Cardigan's sacred grove where his wife lies buried, results in a free-for-all fight unfairly incited by the Colonel, in which Shirley aids Bryce to escape. But she swears they must always be enemies.

After a visit to his own camp to discharge the drunken McTavish, Cardigan's old woods-boss, where he meets the beautiful Moira, Bryce boards the homebound logging train. Bryce suddenly realizes—the train is running away and that it rests with him to save Shirley and Pennington, riding in the caboose.

NEVERTHELESS he took them. Axe in hand, he leaped down to the narrow ledge formed by the bumper in front of the caboose—driving his face into the front of the caboose; and he only grasped the steel rod leading from the brake-chains to the wheel on the roof in time to avoid falling half stunned between the front of the caboose and the rear of the logging-truck. The caboose had once been a box-car; hence there was no railed front platform to which Bryce might have leaped in safety. Clinging perilously on the bumper, he reached with his foot, got his toe under the lever on the side, jerked it upward, and threw the pin out of the coupling; then with his free hand he swung the axe and drove the great steel jaws of the coupling apart.

The caboose was cut out! But already the deadly curve was in sight; in two minutes the first truck would reach it; and the caboose, though cut loose, had to be stopped, else with the headway it had gathered, it, too, would follow the logging-trucks to glory.

For a moment Bryce clung to the brake-rod, weak and dizzy. His chin was bruised, skinned, and bloody; his nose had been broken, and twin rivulets of blood ran from his nostrils. He wiped it away, swung his axe, drove the blade deep into the bumper and left it there with the haft quivering; turning, he climbed swiftly up the narrow iron ladder beside the brake-rod until he reached the roof; then, still on the ladder, he reached the brake-wheel and drew it promptly but gradually around until the wheel-blocks began to bite, when he exerted his tremendous strength to the utmost and with his knees braced against the front of the caboose, held the wheel.

The brake screamed, but the speed of the caboose was not appreciably slackened. "It's had too good a start!" Bryce moaned. "The momentum is more than I can overcome. Oh, Shirley, my love! God help you!"

He cast a sudden despairing look over his shoulder. He was winning, after all, for space of six feet now yawned between the end of the logging-truck and the bumper of the caboose. If he could but hold that tremendous strain for a quarter of a mile, he might get the demon caboose under control! Again he dug his knees into the front of the car and twisted on the wheel until it seemed that his muscles must crack.

After what seemed an eon of waiting, he ventured another look ahead. The rear logging-truck was a hundred yards in front of him now, and from the wheels of the caboose an odor of burning drifted up to him. "I've got your wheels locked!" he half sobbed. "I'll hold you yet, you brute. Slide! That's it! Slide, and flatten your infernal wheels. Hah! You're quitting—quitting. I'll have you in control before we reach the curve. Burn, curse you, burn!"

With a shriek of metal scraping metal, the head of the Juggernaut ahead took the curve, clung there an instant, and was catapulted out into space. Logs weighing twenty tons were flung about like kindling; one instant, Bryce could see them in the air; the next they had disappeared down the hillside. A deafening crash, a splash, a cloud of dust—

WITH a protesting squeal, the caboose came to the point where the logging-train had left the right of way, carrying rails and ties with it. The wheels on the side nearest the bank slid into the dirt first and plowed deep into the soil; the caboose came to an abrupt stop, trembled and rattled, overtopped its centre of gravity, and fell over against the cut-bank.

Bryce, still clinging to the brake, was braced for the shock and was not flung off. Calmly he descended the ladder, recovered the axe from the bumper, climbed back to the roof, tipped off the roof to the top of the bank and sat calmly down under a manzanita bush to await results. He was curious to see how Shirley Sumner would behave in an emergency.

Colonel Pennington was first to emerge at the rear of the caboose. He ran to the front of the car, looked down the track, and swore feelingly. Then he darted back to the rear.

"All clear, my dear," he called to

Shirley. "Thank God, the caboose became uncoupled—guess that fool brakeman forgot to drop the pin. Come out, my dear."

Shirley came out, dry-eyed, but white and trembling. The Colonel placed his arm around her, and she hid her face on his shoulder. "There, there!" he soothed her affectionately. "It's all over, my dear."

"The train," she cried in a choking voice. "Where is it?"

"In little pieces—down in Mad River." He laughed happily. "And the logs weren't even mine! As for the trucks, they were a lot of ratty antiques and only fit to haul Cardigan's logs. About a hundred yards of roadbed ruined—that's the extent of my loss, for I'd charged off the trucks to profit and loss two years ago."

"Bryce Cardigan," she sobbed. "I saw him—he was riding a top log on the train. He—ah, God help him!"

The Colonel shook her with sudden ferocity. "Young Cardigan," he cried sharply. "Riding the logs? Are you certain?"

She nodded, and her shoulders shook piteously.

"Then Bryce Cardigan is gone!" Pennington's pronouncement was solemn. "No man could have rolled down into Mad River with a trainload of logs and survived. The devil himself couldn't." He heaved a great sigh, and added: "Well, that clears the atmosphere considerably, although for all his faults, I regret, for his father's sake, that this dreadful affair has happened. Don't cry, my dear. I know it's terrible, but—there, there, my love. Do brace up. Poor devil! For all his treatment of me, I wouldn't have had this happen for a million dollars."

SHIRLEY burst into wild weeping. Bryce's heart leaped, for he understood the reason for her grief. She had sent him away in anger to his death; it would be long before Shirley would forgive herself. The sight of her distress now was more than he could bear. He coughed slightly, and the alert Colonel glanced up at him instantly.

"Well, I'll be hanged!" The words fell from Pennington's lips with a heartiness that was almost touching. "I thought you'd gone with the train."

"Sorry to have disappointed you," Bryce replied blithely, "but I'm just naturally stubborn. Too bad about the atmosphere you thought cleared a moment ago! It's clogged worse than ever now."

At the sound of Bryce's voice, Shirley raised her head, whirled and looked up at him. He held his handkerchief over his gory face that the sight might not distress her; he could have whooped with delight at the joy that flashed through her wet lids.

"Bryce Cardigan," she commanded sternly, "come down here this instant."

"I'm not a pretty sight, Shirley. Better let me go about my business."

She stamped her foot. "Come here!"

"Well, since you insist," he replied, and he slid down the bank.

"How did you get up there—and what do you mean by hiding there spying on me, you—you—oh, you!"

"Cuss a little, if it will help you," he suggested. "I had to get out of your way—out of your sight—and up there

was the best place. I was on the roof of the caboose when it toppled over, so all I had to do was step ashore and sit down."

"Then why didn't you stay there?" she demanded furiously.

"You wouldn't let me," he answered demurely. "And when I saw you weeping because I was supposed to be with the angels, I couldn't help coughing to let you know I was still hanging around, ornery as a book-agent."

"How did you ruin your face, Mr. Cardigan?"

"Tried to take a cast of the front end of the caboose in my classic countenance—that's all."

"But you were riding the top log on the last truck—"

"Certainly, but I wasn't hayseed enough to stay there until we struck this curve. I knew what was going to happen, so I climbed down to the bumper of the caboose, uncoupled it from the truck, climbed up on the roof, and managed to get the old thing under control with the hand-brake; then I skedaddled up into the brush because I knew you were inside, and— By the way, Colonel Pennington, here is your axe, which I borrowed this afternoon. Much obliged for its use. The last up-train is probably waiting on the siding at Freshwater to pass the late lamented; consequently a walk of about a mile will bring you a means of transportation back to Sequoia. As for myself, I'm in a hurry, and my room is more to be desired than my company, so I'll start now."

HE lifted his hat, turned, and walked briskly down the ruined track.

Shirley half opened her lips to call him back, thought better of it, and let him go. When he was out of sight, it dawned on her that he had risked his life to save hers.

"Uncle Seth," she said soberly, "what would have happened to us if Bryce Cardigan had not come up here to-day to thrash your woods-boss?"

"We'd both be in Kingdom Come now," he answered truthfully.

"Under the circumstances, then," Shirley continued, "suppose we all agree to forget that anything unusual happened to-day—"

"I bear the young man no ill will, Shirley, but before you permit yourself to be carried away by the splendor of his action, it might be well to remember that his own precious hide was at stake also."

"No, he would not," she insisted, for the thought that he had done it for her sake was very sweet to her and would persist. "Cooped up in the caboose, we did not know the train was running away until it was too late to jump, while Bryce Cardigan, out on the logs, must have known it almost immediately. He would have had time to jump before the runaway gathered too much headway—and he would have jumped, Uncle Seth, for his father's sake."

"Well, he certainly didn't stay for mine, Shirley."

She blushed furiously. "Uncle Seth," she pleaded, "let's be friends with Bryce Cardigan; let's get together and agree on an equitable contract for freighting his logs over our road."

"You are now," he replied severely, "mixing sentiment and business; if you persist, the result will be chaos. Cardigan has in a large measure squared himself for his ruffianly conduct earlier in the day, and I'll forgive him and treat him with courtesy hereafter; but I want you to understand, Shirley, that does not constitute a license for that fellow to crawl up in my lap and be petted. He is practically a pauper now, and you'll please me greatly by leaving him severely alone."

"I'll not do that," she answered with a quiet finality that caused her uncle to favor her with a quick glance.

He need not have worried, however, for Bryce Cardigan had embarked upon a war—a war which he meant to fight to a finish.

CHAPTER XVIII

GEORGE SEA OTTER, summoned by telephone, came out to Freshwater, the station nearest the wreck, and transported his battered young master

back to Sequoia. Here Bryce sought the doctor in the company's little hospital and had his wrecked nose reorganized and his cuts bandaged. It was characteristic that when this detail had been attended to, he should go to the office and work until the six o'clock whistle blew.

Old Cardigan was waiting for him at the gate when he reached home. George Sea Otter had already given the old man a more or less garbled account of the runaway log-train, and Cardigan was eager to ascertain the details of this new disaster. The loss of the logs was trifling—perhaps three or four thousand dollars; the destruction of the rolling-stock was the crowning misfortune. Both Cardigans knew that Pennington would eagerly seize upon this point to stint his competitor still further on logging-equipment, that there would be delays—apparently unavoidable—before this lost rolling-stock would be replaced. And in the interim the Cardigan mill, unable to get a sufficient supply of logs to fill orders in hand, would be forced to close down.

"Well, son," said John Cardigan mildly as Bryce unlatched the gate, "another bump, eh?"

"Yes, sir—right on the nose."

"I meant another bump to your heritage, my son."

"I'm not worrying about my heritage at all. I've come to a decision: We're going to fight and we're going down fighting. I started the fight this afternoon. I whaled the wadding out of that bucko woods-boss of Pennington's. Even went so far as to muss the Colonel up a little."

"Wow, Bryce! Bully for you! That man Rondeau has terrorized our woods-men for a long time. He's king of the mad-train, you know."

Bryce was relieved. His father did not know, then, of the act of vandalism in the Valley of the Giants.

Arm in arm they walked up the garden path together.

JUST as they entered the house, the telephone in the hall tinkled, and Bryce answered.

"Mr. Cardigan," came Shirley Sumner's voice over the wire.

"Bryce," he corrected her.

She ignored the correction.

"I—I don't know what to say to you," she faltered.

"There is no necessity for saying anything, Shirley."

"But you saved our lives, and at least have a right to expect an acknowledgment. I rang up to tell you how splendid and heroic your action was—"

"I had my own life to save, Shirley." "You did not think of that at the time."

"Well—I didn't think of your uncle's, either," he replied without enthusiasm.

"I'm sure we never can hope to catch even with you, Mr. Cardigan."

"Don't try. Your revered relative will not; so why should you?"

"You are making it somewhat hard for me to—to—rehabilitate our friendship, Mr. Cardigan. We have just passed through a most extraordinary day, and I think you ought to do your share—and help."

"Bless your heart," he murmured.

"The very fact that you rang me up at all makes me your debtor. Shirley, can you stand some plain speaking—between friends, I mean?"

"I think so."

"WELL, then," said Bryce, "listen to this: I am your uncle's enemy until death do us part. I'm going to smash him if I can."

"If you do, you smash me," she warned him.

"Likewise our friendship. I'm sorry, but it's got to be done if I can do it. Shall—shall we say good-bye, Shirley?"

"Yes-s-s!" There was a break in her voice. "Good-bye, Mr. Cardigan."

"Good-bye! Well," he murmured sotto voce, "there goes another bright day-dream." Unknown to himself, he spoke directly into the transmitter, and Shirley, clinging half hopefully to the receiver at the other end of the wire, heard him—caught every inflection of

the words, freighted with the pathos of Bryce's first real tragedy.

"Oh, Bryce!" she cried sharply. But he had hung up his receiver now.

The week that ensued was remarkable for the amount of work Bryce accomplished, also for a visit from Donald McTavish, the woods-boss. Bryce found him sitting in the private office one morning.

"Hello, McTavish," he saluted the woods-boss cheerfully and extended his hand for a cordial greeting. His wayward employee stood up, took the proffered hand in both of his huge and callous ones.

"Weel! 'Tis the wee laddie hissel'," he boomed. "I'm glad to see ye, boy."

"You'd have seen me the day before yesterday—if you had been seeable," Bryce reminded him with a bright smile.

"I'll nae deny I take a wee drapple now an' then," the woods-boss admitted frankly, albeit there was a harried, hangdog look in his eyes.

Bryce sat down at his desk, lighted his pipe, and looked McTavish over soberly. The woods-boss was a big, raw-boned Scotchman, with a plentiful sprinkling of silver in his thick mane of red hair. A tremendous nose rose majestically out of a strong and rugged face; his long arms hung, gorilla-like, almost to his knees. Though in the late fifties, his years had touched him lightly; but John Barleycorn had not been so considerate. Bryce noted that McTavish was carrying some thirty pounds of whiskey fat and that the pupils of his fierce blue eyes were permanently distended, showing that alcohol had begun to affect his brain. His hands trembled as he stood before Bryce, smiling fatuously and plucking at the cuffs of his mackinaw.

"Mac, did Moira give you my message?"

"Aye."

"Well, I guess we understand each other, Mac. Was there something else you wanted to see me about?"

McTavish sidled up to the desk. "Ye'll no be firin' auld Mac oot o' hand?" he pleaded hopefully. "Mon, ha ye the heart to do it—after a' these years?"

Bryce nodded. "If you have the heart—after all these years—to draw pay you do not earn, then I have the heart to put a better man in your place."

"Ye was ever a laddie to hae your bit joke."

"It's no good arguing, Mac. You're off the pay-roll onto the pension-roll—your shanty in the woods, your meals at the camp kitchen, your clothing and tobacco that I send out to you. Neither more nor less!" He reached into his desk and drew forth a check. "Here's your wages to the fifteenth. It's the last Cardigan check you'll ever finger. I'm terribly sorry, but I'm terribly in earnest."

"Who will ye pit in ma place?"

"I don't know. However, it won't be a difficult task to find a better man than you."

"I'll nae let him work," McTavish's voice deepened to a growl.

"You worked that racket on my father. Try it on me, and you'll answer to me—personally. Lay the weight of your finger on your successor, Mac, and you'll die in the county poor-farm."

McTavish's glance met the youthful master's for several seconds; then the woods-boss trembled, and his gaze sought the office floor. Bryce knew he had his man whipped at last, and McTavish realized it, too, for quite suddenly he burst into tears.

"Dinna fire me, lad," he pleaded. "I'll gae back on the job an' leave whusky alone."

"Nothing doing, Mac. Leave whiskey alone for a year and I'll give you back your job. For the present, however, you're discharged."

"Who kens the Cardigan woods as I ken them?" McTavish blubbered. "Who'll swamp a road into timber sixty per cent clear when the mill's runnin' on foreign orders an' the owd man's calling for clear logs? Who'll fell trees wi' the least amount o' breakage? Who'll—"

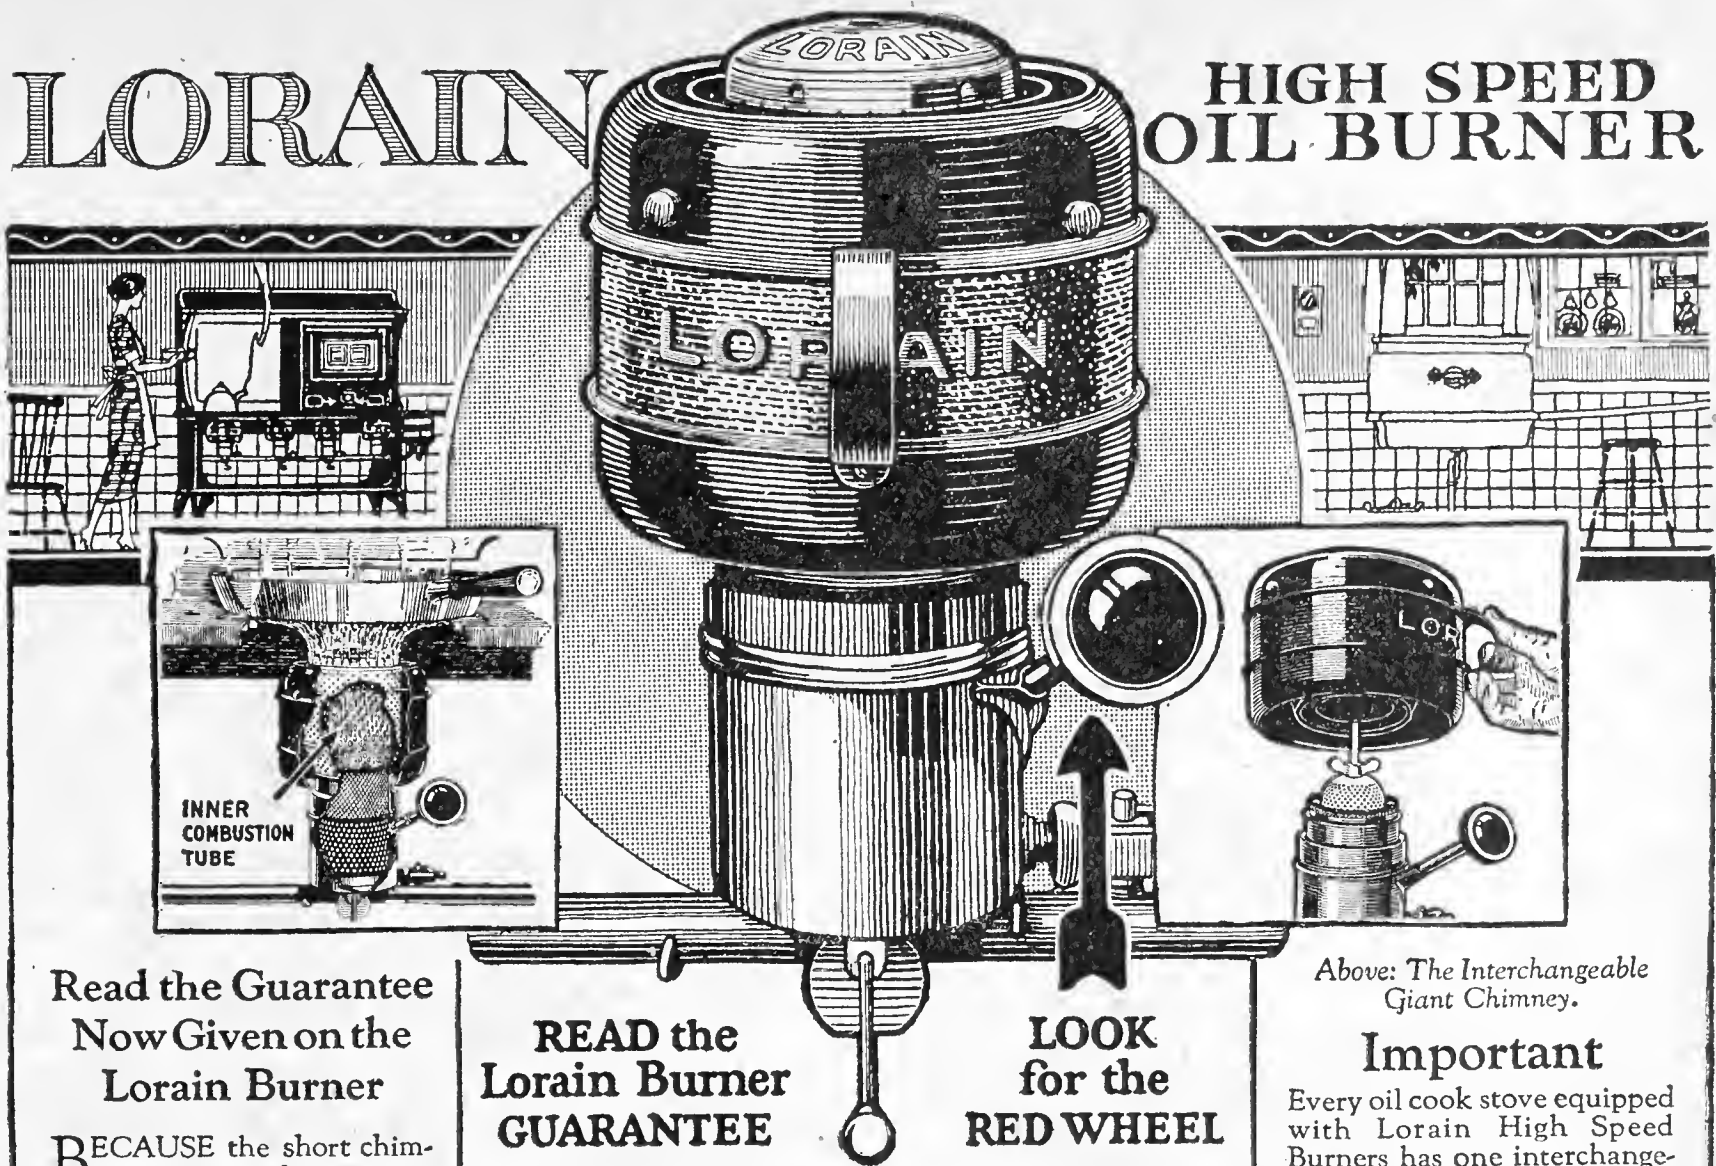

"Don't plead, Mac," Bryce interrupted gently. "You're quite through, and I can't waste any more time on you."

"Ye dinna mean it, lad. Ye canna mean it."

"On your way, Mac. I loathe argu-

Lorain Burner
GUARANTEE

LOOK
for the
RED WHEEL

BECAUSE the short chimney oil stove burner produces an intense flame which strikes directly on the bottom of the cooking utensil, the heat generated has, in the past, caused the early destruction of its vital part, the inner combustion tube.

This fault has been completely eliminated in the Lorain High Speed Oil Burner by making the inner combustion tube of "Vesuvius Metal" which is not affected by the destructive action of this intense heat.

Therefore, American Stove Company now gives the following unconditional guarantee with each Lorain Oil Burner:

Guarantee Should the inner combustion tube of the Lorain High Speed Oil Burner burn out within 10 years from date of purchase, replacement will be made entirely free of charge.

READ the
Lorain Burner
GUARANTEE

About Oil Stoves

FOR cooking purposes the short chimney oil burner is admittedly far superior. First, because it generates a clean, odorless, blue flame of great intensity. Second, because this intense heat comes in direct contact with the cooking utensil, not ten inches from it.

The Lorain High Speed Burner is probably the most efficient of all short chimney burners. It gives an intense heat. The burner won't get out of order. It is easy to operate. It seldom needs cleaning. Wick trouble is practically unknown. And, the burner is durable. Read the Guarantee.

You can get most any size, style and color of oil cook stove equipped with the Lorain High Speed Oil Burner, because many famous makes of oil stoves now have it as standard equipment.

Dealers everywhere. Write us if you can't easily locate one near-by.

Above: The Interchangeable Giant Chimney.

Important

Every oil cook stove equipped with Lorain High Speed Burners has one interchangeable Giant Chimney which makes any standard Lorain Burner a Super-heating Giant Burner—an entirely new principle in oil cook stove construction.

Special Features

Positive Wick-Stop stops Wick at Correct Lighting and Burning Point

"Boil-Over" Can't Reach Wick Wick Seldom Requires Trimming

The Wick Won't Stick Easy to Re-Wick

Many famous makes of Oil Cook Stoves are now equipped with the Lorain High Speed Burner, including

- DIRECT ACTION—National Stove Co. Div., Lorain, Ohio
- QUICK MEAL—Quick Meal Stove Co. Div., St. Louis, Mo.
- NEW PROCESS—New Process Stove Co. Div., Cleveland, Ohio

ments. And don't forget your check."

"I maun see yer faither aboot this. He'll nae stand for sic treatment."

Bryce's temper flared up. "You keep away from my father. If you go up to the house to annoy him with your pleadings, McTavish, I'll manhandle you." He glanced at his watch. "The next train leaves for the woods in twenty minutes. If you do not go back on it and behave yourself, you can never go back to Cardigan woods."

"I will nae take charity from any man," McTavish thundered. "I'll nae go back to yon woods to live on yer bounty."

"Well, go somewhere, Mac, and be quick about it. Only—when you've reformed, come back. You'll be mighty welcome. Until then, however, you're as popular with me—that is, in a business way—as a wet dog."

"Ye're nae the man yer faither was," the woods-boss half sobbed. "Ye hae a heart o' stone."

Try a "Chestnut Party"

Winter Amusements—Serviceable Patterns

A successful party for grown-ups, as well as for children, requires planning out on the part of the hostess of the whole evening's events. She should have in mind just what to do next, what form of entertainment to start when the lull begins. One country hostess who is beloved for the good times everyone has at her house recently gave with marked success a chestnut party, and while everything moved with gay spontaneity, there was a lot of real planning back of the evening's informal events. In the first place, she specified in her invitations that her guests were to come prepared to sing, recite or relate some "old chestnut"; and they came with such songs as "My Bonnie Lies Over the Ocean" and "Old Black Joe," with such recitations as "Curfew Shall Not Ring Tonight" and "The Polish Boy," and

an infinite number of ancient jokes. The hostess had written down for her own guidance a number of old-fashioned games, such as "Going to Jerusalem," "Fruit Basket," "Hiding the Thimble"—in this case a chestnut—and "Gossip." In this latter game the guests sit in a circle or in a row, and the leader whispers in a low tone and very quickly a piece of gossip to his next neighbor, who in turn whispers it to the next, and so on down the line. The last person tells out loud what has come to his ears, and then the leader repeats her original statement. These are usually totally different.

Refreshments of the cider and gingerbread type were served, and the chestnuts were roasted at the grate. The festivities came to a close with the singing of old-fashioned songs.—GLADYS S. JOHNSON.

JANUARY IS THE MONTH FOR MAKING UNDERCLOTHES

IN the city, "White Sales" are on, and everyone is making underthings to replenish run-down wardrobes. The patterns shown this week include almost every undergarment a home dressmaker could make, and so much more reasonable are the home-made clothes—to say nothing of their better wearing qualities—that our advice is to order all four patterns and start right in!

Our spring catalogue is ready. See last paragraph.

To the left a high-necked, long-sleeved nightgown with a novel pajama coat, style of collarless neck and opening. Delightfully warm in flannelette or suitable for thinner materials.

No. 9045 cuts in sizes 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 4¾ yards 36-inch material. Price 12 cents.

9045

No. 1602 cuts in sizes 34, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 36 requires ¾ yard 36-inch material. Price 12 cents.

To Order: Write your name and address plainly, inclose 12 cents in stamps or coins (stamps preferred; wrap coin carefully) for each pattern ordered, and send your order to Fashion Department. Our Spring Book of Fashions containing all the new models for the coming season, is ready. It contains pattern styles for the whole family, and money can be saved by referring to it in selecting the Spring wardrobe. In addition to over 300 styles, there are pages of embroidery designs, styles worn by movie stars, and dressmaking lessons to help the beginner. The price is 10 cents per copy. Address your order to Fashion Department, American Agriculturist, 461-4th Ave., New York City.

The new style combination, like the "athletic" undergarments which have become so popular, is shown in 9182. This can be cut with the square neck which is so much the prettier when worn with white waists or thin dresses.

No. 9182 cuts in sizes 36, 40 and 44 inches bust measure. Size 36 requires 2¼ yards 36-inch material with 3¾ yards edging and 2¼ yards ribbon. Price 12 cents.

Either made in dark material as a substitute for a petticoat, or in batiste or other cotton fabrics for wear in the knee length, this bloomer pattern is both comfortable and practical. Silk jersey is popular for the longer style and comes in very pretty dark colors.

No. 9805 cuts in sizes 24, 28, 32 and 36 inches waist measure. Size 28 requires 2¼ yards 36-inch material. Price 12 cents.

A full and suggestive treatment of the business of dairying

The Cow

By JARED VAN WAGENEN, Jr.

"This little volume is not an attempt to reduce cow-keeping to cold demonstrations of chemistry and physiology and bacteriology—and cash, but rather to strike the personal note and to speak of dairying on one old hill farm and to put into language a little of the glow and the glamour of real farm life."—Jared Van Wageningen, Jr.

Did You Ever Try — ?

A. A. READERS PASS ON USEFUL HINTS

NOT all women know how to wash chamois skins (face cloth). A good grade chamois will always be as soft and as clean as new, if it is washed in heavy suds from a mild, pure soap, and also rinsed in heavy soap suds. This is true, too, of washable doekin gloves and of all woolen gloves, mittens and wristlets. The rinsing in clear water which they usually receive makes them harsh and stiff.

To protect the knees of a creeping child's stockings to save darning, cut tops from old long kid gloves and fasten over stockings to same supporter. One pair will outlast a child's creeping stage and save many pairs of stockings.—**MRS. BLANCHE FUNK, Mo.**

Do all housekeepers know that if you boil potatoes 15 minutes, then bake, they will bake in half the time? This holds true for apples also.

Do you know that if you first wet the meal for mush and stir it smooth, you can then add it to the boiling salted water, and it will not lump and cook quicker?—**MRS. IDA A. BROWN, N. Y.**

This is the time of year when our sweet potatoes are better baked. As a rule, the housewife finds her potatoes tough and dry and choky. To avoid this, wash the potatoes thoroughly and brush with butter or some fresh bacon grease and pour about one-half cupful water in the pan they are baked in. The potatoes will be soft and juicy.

Oftentimes the housewife goes to her kitchen and finds she failed to save enough buttermilk to make her much-liked soda biscuit. If she has a lemon in the house, she will find her way out by using the same amount of soda as she would were she using buttermilk, and squeezing about a teaspoonful of lemon juice in the water or sweet milk.—**MRS. M. W. FISKE, Tenn.**

Instead of basting long seams, fasten with wire clips such as are used for fastening papers. They are better than pins, for they will not work loose.

Aprons for little girls are easily made by using twice the length of cloth and rounding out for neck. On each side lay tucks to fit the shoulders. It may be gathered to fit closely at waist or left loose. I prefer the latter. When sides are sewed and bottom hemmed, you have an apron that is exactly alike on both sides and can be worn either way. If desired, the neck may be trimmed. Of course, the armholes should be cut out a little.

The obstinate earache from which children suffer so much is often relieved by filling a flannel bag with hops and steaming until thoroughly heated. Bind on as hot as can be borne and nine times out of ten the youngster will soon be asleep.—**MRS. GEORGE GRAY,**

Many a discarded old stove, with the right care, would be good for many years yet. Keep the outside of your stove clean and rub while warm with a cloth containing paraffin wax. This will prevent the stove from rusting. Keep the ashpan empty, because full ashpans mean burnt-out grates. Try cleaning out your flues by burning your cast-off fruit jar lids in your stove. The zinc in the lids burns out the creosote.

If you have trouble keeping the chocolate from running off your chocolate drops, add two teaspoonfuls of melted paraffin to each bar of chocolate. Blend the paraffin and chocolate well before dipping the fondant.—**MRS. NELLIE MARQUAND, Nebraska.**

Instead of standing to do all your work, use a high stool. Have it regulated to your own height so that you can rest your feet on the lower rungs. The stool will come in handy doing the dishes, ironing, dressing fowls, mixing bread, cake, cookies and dozens of other uses will be found daily. Its use will save much backache and aching feet and limbs and will keep you from feeling so "tired out" all the time.—**CLARICE RAYMOND.**

Reviewing the Latest Eastern Markets

EGG PRICES DROP WITH HEAVY RECEIPTS

IN the last week eggs in the New York market dropped to the lowest price they have reached in five months. The break came at about the same time this year as last, owing to mild weather and heavy receipts. The weekly receipts at New York jumped to 34,689 cases last week, as compared with 28,174 in the week previous. Last week's receipts were 11,000 cases in excess of the corresponding week last year.

Nearby white eggs, of which supply has increased considerably, were affected by the slump, and declined along with Pacific Coast whites and other eggs.

The market was so weak that dealers

Trading in cheese continues quiet, but the market has developed a firmer tone since the first of the year. Up-State New York cheese is not coming to this market for sale at present, and there have been very small receipts of Wisconsin cheese. The immediate prospect is for a strong market. The whole-sale prices on January 18 showed very little change from the week previous. State whole milk, average run, 27½ @ 28c; single daisies, held, 27½ @ 28½c; State skims, held, 21½ @ 22c; fresh, 20 @ 21c; Young Americas, held, 28 @ 28½c.

Stronger Market for Barreled Apples

The cold weather of last week seemed to bring a more active demand for barreled apples. Under lighter receipts the

shipments of new Southern cabbage become heavy. Last year the shipments of new cabbage up to the middle of January were nearly 3 times what they have been so far this season.

Heavy Fowls in Demand

Although receipts of fresh-killed poultry continue liberal, there is no surplus of the desirable grades of dressed fowls. The bulk of the receipts are chickens which are hard meat and staggy, and bring irregular prices. Dry-picked fowls, 5 lbs. and over, in bbls. brought 31 @ 32c per lb.; 4 lbs. weight, 30c; roasting chickens, dry picked, 4 to 6 lbs. weight and over, brought 34 @ 36c per lb.; 3½ lbs. and under, 24 @ 30c. Capons are in fair demand, selling at 33 @ 40c per lb. for 5 to 8 lbs. weight. Young guinea hens, 4 to 5 lbs. weight, sell at \$1.75 per pair; 3 to 4 lbs., \$1.50; old guinea fowls, 75 @ 90c.

Country Dressed Calves Find Firm Market

Receipts of country-dressed calves at New York were very light last week, and although the demand was not heavy, the market continued firm. Fresh, choice calves brought 20 to 21c per lb.; prime, 18 @ 19c; good, 16 @ 17c; poorer sorts, 9 @ 15c. Country-dressed pigs were not in demand; white-skinned roasting, 10 to 19 lbs. weight, brought 25 @ 30c per lb.; 16 to 40 lbs., 15 @ 16c; heavier weights down as low as 8c. Only fancy hot-house lambs are in good demand at 12 @ 14c; other dressed lambs, prime, per cwt., bring \$15.25 @ 15.50; common to good, \$11.75 @ 15.

Hay Market Continues Weak

At time of writing this report, the New York hay market was weak, and prices very irregular, with slow trading and only very best qualities getting outside quotations.

Alfalfa, per ton, second cutting, No. 1, \$26 @ 27; No. 2, \$24 @ 25. U. S. heavy clover, mixed (not more than 65 per cent clover), No. 1, \$19 @ 20.

Feed Market Dull

There was very little change last week in the Buffalo feed market. Cottonseed meal, 36 per cent, advanced \$1 per ton. Both standard spring bran and hard winter bran showed slight advances, while standard spring middlings declined a little. Prices on carlots f. o. b. Buffalo in 100-lb. sacks, January 17, were: Gluten feed, \$46.25 @ 47; cottonseed meal, 36 per cent, \$48 @ 48.50; cottonseed meal, 43 per cent, \$54.25 @ 54.75; oil meal, 33 to 34 per cent, local billed, \$54.50 @ 55; dried brewers' grains (nominal), \$49 @ 50; standard spring bran, \$32 @ 32.25; hard winter bran, \$32.50 @ 32.75; standard spring middlings, \$32.75 @ 33; choice flour middlings, \$34.75 @ 35.25; white hominy, \$35.80 @ 36.30. Per bushel, No. 2 yellow corn, new, 83½c; No. 3, 82c; No. 2 white oats, new, 51½c; No. 3, 49½c.

The following were the cash grain quotations per bushel at New York: No. 2 red wheat, \$1.34; No. 2 hard winter, \$1.32½; No. 2 yellow corn, 91¼c; No. 2 mixed corn, 90¼c; No. 2 white oats, 56c; No. 3 white oats, 54½ @ 55c; rye for export, \$1.01½; barley for malting, 80 @ 82c. At Chicago: No. 2 white corn, 73 @ 73¼c; No. 2 yellow corn, 73 @ 73¼c; No. 2 white oats, 45 @ 46c; barley, 58 @ 63c; rye, 88¼c.

Lambs, common to good.....	11 @ 15	8 @ 15
Sheep, common to good ewes.....	3½ @ 5½
Hogs, Yorkers.....	9¼ @ 9¾	8¾ @ 9½

were compelled to hold many express shipments on their floors for a week or more in order to avoid sacrificing them at low prices. The greater part of the receipts from nearby sections are still of mixed sizes and neglected by the most particular trade. The bottom prices of last week were reached on January 16 and 17, when nearby hennery extra firsts were quoted at 45 to 47c. On January 18 the market became firmer and prices recovered 2c per doz.

The market for storage eggs was affected by the decline in fresh stock. Very few storage eggs were fine enough to sell at a price higher than 32c per doz. There are about 10,000 cases on hand in cold storage in New York at the present time in excess of the amount on hand last year. Most of the storage eggs are offered at 28 to 31c.

A comparison of prices on nearby eggs on January 18, 1923, with the same date last year shows about 1c per doz. higher quotations this year than last on hennery whites, and about the same price on gathered whites and pullets.

Butter Market Weakens Again

After the advance and firmer market reported here last week, butter prices started downward again. Creamery prices on January 18 were 2c lower than a week before. Buyers held off on this declining market. Prices are still 15c higher than last year, which probably causes a decreased consumption. There is quite an accumulation of fresh butter in the market. A steamer arrived from Denmark with 3,100 casks of Danish creamery and 1,100 boxes of unsalted came in from Argentine. The Danish butter sold at 51 to 52c, duty paid. Storage stocks of creamery butter have been considerably reduced, and the trade has gradually shifted to fresh. The market has been overstocked with unsalted creamery, and there is an accumulation of receipts in the market.

market became stronger and prices on January 18 were as follows:

VARIETY	Best	Fancy	Ordinary
Greenings.....	\$4.50@4.75	\$5	\$4 @ 4.25
Baldwin.....	4.25@4.50	\$4.75@5	4
Hubbard.....	3.50@3.75	4	3 @ 3.25
King.....	4 @ 4.50	4.75@5	3.50@3.75
Mcintosh.....	8 @ 8.50	9 @ 9.50	7 @ 7.50

In Rochester section demand is reported moderate and market steady, with following prices on bbls., A, 2½ in.: Greenings, best, \$4.25 @ 4.50; Baldwins, \$4.25 @ 4.50; Wagons, \$4.25; Spitzenburgs, ordinary condition, \$4.

Potato Market Steadier

There was what is called a "better feeling" in the potato market last week. This means that buyers are more active and ready to buy and prices are firmer. The railroad yards where potatoes are received were beginning to clean up some of the accumulation and the prospect is for a better market, with only slight advances in price, if any. A car shortage in Maine is cutting down receipts from that State. Many shipments received last week were frozen and badly damaged.

States, in 150-lb. sacks, sold at \$2 @ 2.10; bulk, per 180 lbs., No. 1 round white mostly at \$2.00 to 2.50. Farmers up-State are receiving 40 to 45c per bu., few 50c per bu. The market on Long Islands is steady at 90c per bu. to farmers.

Cabbage Meets Steady Market

Danish variety cabbage continues to sell at \$25 per ton, with a steady demand and light supplies. At this time last year it was quoted at \$48 to \$60 per ton. Carlot shipments of cabbage for the entire country to January 13 were 35,772 cars, compared with 28,339 the same date last year, and a total for all of last season of only 31,000 cars.

It would seem advisable for those who still have cabbage on hand to market it at present prices before

FISH MEAL

FEEDING

Do you realize the great benefits to your poultry, hogs and stock you are missing by not feeding STRUVEN'S FISH MEAL? This food supplement supplies the necessary proteins and minerals for healthy bone, muscle and tissue. It is made from fresh, whole fish, finely ground, clean and wholesome. Free feeding instructions from

Belgium Melotte

Imported Separator

Self-Balancing Bowl

The Belgium Melotte is the only single-bearing-bowl separator ever made. This patent Bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years of use as when new. Positively cannot ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by remixing with milk. Send coupon below today. Get the Free Book that tells about this great Melotte.

Capacity
275 litres
(625 lbs.)
of milk
per hour

\$ 750
After Trial

We will send an imported Belgium Melotte Cream Separator direct to your farm on 30 days' absolutely Free Trial. Use it just as if it were your own machine. Put it to every possible test. Compare it with any or all others. The Melotte is easy to keep clean and sanitary because it has only one-half the tinware of other separators. Turns so easily that bowl spins 25 minutes after you stop cranking unless brake is applied. No other separator has or needs a brake. After you have tried it for 30 days and you know it is the separator you want to buy, pay \$7.50 down and balance in small monthly payments.

Free Trial

Your choice of any of these three models. NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE. This wonderful Belgium Melotte Separator has been picked by a jury of thousands of farmers—picked by dairy experts throughout the world to be the "king" of all separators ever manufactured. It has broken all records for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability. Send coupon below for Big Free Book.

Eighty Years With Farm Machinery — By Alexander Legge

DIBBLE'S Tested Seed Oats

DIBBLE'S HEAVY-WEIGHT, the heaviest and most productive American-grown Oat. The straw is strong, tall, and stiff. The grain is thin-hulled and of splendid color. The average weight is 42 to 44 lbs. per measured bushel, and we had several crops last season weighing still more; one entire crop threshed out over 2,000 bushels of 47-lb. grain. The Oat Crop of the United States last year was 200,000,000 bushels short of the ten-year average, with poor quality and light weight the rule. Our Oats were never better, and we have the choicest stock of Heavy-Weight Oats in our Seedhouse we have ever owned.

Dibble's Heavy-Weight Oats produce record-breaking crops throughout the Eastern States. New Jersey is not considered a good oat State, yet Reuben McDonald of Jamesburg writes: "We had 700 bushels from 7½ acres." Emil Seibert of Monroe County, New York, states: "They outyielded our own seed three to one." Thomas W. Rogers of Rutland County, Vermont, grew a crop that by weight equaled "over 117 bushels per acre." And Irwin Farber of Stark County, Ohio, says: "They yielded just *twice* the amount of other kinds," and we have scores of similar testimonials.

Dibble's Twentieth Century Oats, extra early, extremely productive, with grain weighing 34 to 38 lbs. per measured bushel. On our own farms, growing from 100 to 150 acres annually for 8 to 10 years, they have given us a yield which was over twice the average production for the United States for the same period. If your own oats are light weight, badly stained or run out, you cannot afford to sow them when you can get Dibble's heavy, bright clean Seed Oats for so little money. We make a very low price on 10 bushels or more.

FREIGHT PREPAID

Eighty Years With Farm Machinery

How Would You Like to Go Back to "The Good Old Days"

IN trying to fill the American Agriculturist's request for a brief review of the farm implement industry in the last 80 years, I have not found that anybody has written a real and comprehensive history of this industry. The subject is so interesting, and is so bound up with the development of agriculture and of the national prosperity, that it would seem well worth the best efforts of any historian's pen; and these efforts ought to be made while there are still some living witnesses of the beginnings of this especially significant industry.

It is not so easy now to learn exactly what tools the farmer had 80 years ago, where they were made, and how he obtained them. Dates of invention are of little use, because then, as now, a long period usually intervened between the patent and general use.

Fortunately, however, I have been permitted to see letters which contain the recollections of two persons, still living, who tell what they saw with their own eyes about the farm equipment of three quarters of a century ago. One letter is from a bright old lady over at Oxford, Mich., writing of her father's farm implements 76 years ago. She says: "We had a plough and a drag, a wagon

By ALEXANDER LEGGE

and long sled or sleigh; a flail and fanning mill later on. Some of the grain was threshed out by throwing it on the barn

ing to go, Ann and I, out in the field to drop corn for father. When the corn needed cultivating, it was done with a hoe, and when ripe it was cut down with a corn cutter made by cutting down an old grass scythe. They cut their hay with a scythe and their grain with a cradle. "When we wanted any corn shelled for meal, father would bring a shovel into the house and evenings he would put the handle on a chair and sit on it and scrape the corn from the cob into a dish."

Down at Buncombe, Ill., lives a man named Elkins, 97 years old, with a mind and memory that are still keen. I quote from a letter, written by his daughter's hand, in which he tells of the farm equipment that he used as a boy in 1842:

"We had a bar-share plow—a flat piece of iron with the back turned up a little for handles and beam to be fastened to. It was run flat on the ground, just scraping a little, and the

wooden part was made mostly of white oak.

"We also had a bull-tongue plow, very narrow and long, made of iron, and a colter in front. It was much like the single-shovel plow that is in use now. These plows were

(Continued on page 100)

The progress represented by the contrast in this picture completely changed the history of America. The harvester released millions to go to the cities and fed them after they had gone

floor and letting oxen tread on it round and round, and some with a flail. We could get our wheat ground for bread at Orion, about four miles away, where they had a good grist mill.

"It was a good many years before we ever heard of a cultivator. I can remember hav-

mold-board forms an angle of about 40 degrees, with a line of the beam, and, in operation, will throw the dirt from one to three feet, according to the speed of the team. In figure 12 you have a

(Fig. 12.)

sketch of one as it stands ready for use. The landside is a bar of iron, about 1 to 1 1/2 inches wide, and from 1/2 to 3/4 of an inch thick; standard, about 1/2 inch by 1 1/4 inches. The mold-board

From American Agriculturist of 1843

It is progress from the "Iron on a Stick" used for plowing in 1842 to the modern multiple bottom plow, yet there are men still living who remember each stage in the wonderful development in soil tillage methods

Corporation Farming Leads to Peasantry

MR. MOSHER with his letter in the issue of December 30, started some interesting discussion on the advantages of corporation farming. Judging by the letters, some of which we are giving on the opposite page, our readers do not agree with Mr. Mosher. We do not agree with him, either.

Cooperative or corporate groups are necessary for the best results in farm marketing, but God forbid that day shall ever come when the land is owned and farmed by large groups in large units; when the American farmer shall cease to work for himself or when opportunities shall cease for individual initiative and independent thought. The small farms and the millions of independent landholders have saved our country people from the peasantry of the Old World, made our republican institutions possible and America what she is.

The Lesson From Europe

THE mightiest lesson in cooperation the world has ever known is the way the Allied nations worked together to win the war, and, conversely, the best example of how not to cooperate is the failure of these same nations to work together for reconstruction.

There came a crisis during the war when any hesitancy on the part of the Allies to submerge their selfish individual desires for the common good would have been fatal to the civilization of the world, and we know that from the last soldier in the ranks to the supreme commander, General Foch himself, there was presented to the enemies of civilization a united, unbroken front. But, because the story since the war has been different, we came near another catastrophe which threatened to upset all that was gained

by the thousands who died on Flanders fields. Since the war we have seen the sad spectacle of Italy trying to go it alone as an individual, France and England airing an ancient grudge, and America believing in letting them quarrel it out among themselves. Because of dissension, Turkey, a once feeble and bankrupt nation, has massacred Christians by the thousands and hundreds of thousands, reconquered lost territory, succeeded in making individual treaties with Italy and France favorable to herself, and, worst of all, has succeeded in interesting the Bolsheviks of Russia and the militarists of Germany in another plan to overthrow civilization.

Farmers of America are this winter facing an economic situation similar to the political one in Europe. Faced by the economic troubles left by the war, they are uneasy and dissatisfied, and some are thinking that the solution of their marketing troubles is to be worked out with the middlemen alone as individuals instead of themselves cooperatively. To these dissatisfied farmers, both in farm organizations and out, we point to the lesson in lack of cooperation and its deplorable results which the once Allied nations present at the present time.

Know Your Farm Leaders

"HOW many of your leaders do you know?" was the question recently put to American Agriculturist readers, and a picture of the gathering at Syracuse, showing fifty or sixty New York State Farm Bureau Federation men for identification.

The answer unfortunately seems to be "very few." The lists submitted were surprisingly short; and in many cases the results, it seemed, of out-and-out guess work. The first prize of \$5 goes to Frank Manders of Manin, New York. The second of \$2 to Mrs. Floyd Moot of Richmondville, N. Y., and one of \$1 to Mrs. William H. Babb, Florida, New York.

It is too bad that the men who are devoting their finest efforts to further the prosperity of our New York State farmers are so little known by the rank and file. "Know your Farm Leaders," was the caption of the picture—American Agriculturist repeats that phrase most urgently and hopes that by the time the next annual meeting of the State Farm Bureau Federation is held, the men and women on the farms, will at least have a "speaking acquaintance" with their leaders in this great work of cooperation and progress.

Interstate Men Adopt Wise Policy

WE congratulate the members of the Interstate Milk Producers' Association upon their unanimous approval of the policy to increase the commission for the expenses of their organization from one cent a hundred to two cents a hundred. This organization with headquarters at Philadelphia is doing a fine work in its effort to secure for Pennsylvania farmers, fair prices for their milk, but its service can be greatly increased with more funds. The extra cent a hundred will enable the organization to employ additional testers and fieldmen and carry out new plans of work all the way along the line.

More Machinery—Less Men

A FEW weeks ago we wrote an editorial expressing the viewpoint of one of our readers to the effect that farm machinery had not made as much progress as inventions used in other business.

Several correspondents think our reader was hasty in his conclusions and that as a matter of fact farm machinery has not only kept apace but considering the difficulties which it has had to overcome has actually outdistanced inventions in other trades.

In this connection, Mr. Legge's history in this issue of the wonderful development of farm machinery is of great interest. Certain it is that farm machinery has been the chief reason why the American farmer with less and less man power has been able to produce more and more food.

A Needed Law

THE National Council of Farmer's Cooperative Marketing Association which recently met in Washington, passed a resolution which should have the support of every farmer and of Congress. The resolution asked for a national law requiring that on containers of any form for foreign agricultural products imported into this country should be conspicuously marked in English to indicate the name and nature of the contents of the package, the name of the country of origin and the date of original packing.

The American public is learning more and more to buy established brands of food products. Large quantities of fresh and dried fruits, eggs, tobacco, nuts, beans, butter, cheese, seeds and many other agricultural products are imported every year into this country in great quantities. While some of these products are of good quality, a good percentage do not conform to American standards of production and packing and child labor laws and compete with established American brands. It is impossible for the consumer to tell from the exterior appearance whether the goods are foreign or American grown. So he is often getting a poor quality foreign article which he thinks is American grown. In many cases foreign goods are repacked in this country and offered for sale without mention being made of the foreign origin or exact quality of the products. A properly labeled package would not keep out the good foreign products, but would protect both producers and consumers in this country from poor quality foreign goods.

Free Seeds Out at Last

AFTER nearly every farm leader and farm paper have worked for years to get Congress to give up the free seed nonsense, their distribution is to be at last discontinued. This will save the Government \$360,000 a year. No real farmer ever received much good from the Government free seeds, but the politicians have bitterly fought to retain the privilege of using free seeds to repair their political fences. Town people got the bulk of the free seeds sent out. Thousands of packages went in the refuse; other thousands served only to start small backyard gardens. Real farmers got the seeds for his crops from other sources, but those not familiar with the facts were under the impression that the free seeds policy was another one of the many ways in which the Government was showing class favoritism to farmers.

The sun should not set upon our anger, neither should he rise upon our confidence. We should forgive freely, but forget rarely. I will not be revenged, and thus I owe to my enemy; but I will remember, for I owe to myself.—COLTON.

What We Think of Corporation Farming

The Pasture Over the Fence Has Weeds, As Well as Our Own

FROM observation of corporation farming, individual farming on a large scale, and experience gained in operation of a large farm it is my opinion that Mr. Mosher's plan allows for considerable criticism.

I will take Mr. Mosher's figures—5,000 acres capitalized at \$500,000—although I believe the same trouble would be encountered on corporations much smaller.

First, the capitalization is much too high for the investor to ever see profit from the sale of farm produce. At 6 per cent the proposed rate of return to investors a profit of \$30,000, would have to be earned. The interest from the Government bonds would not pay the taxes and depreciation on the tools and buildings for such a large proposition.

The minute that one changes from direct farm owner management to a plan of management where it is necessary to hire a manager to direct work or even to someone who is a joint owner, trouble commences and financial returns dwindle. The new manager of the corporation will go at his problems to the best of his ability to show the company officers that he is worthy of his position. But in a corporation where there is cash available the tendency is to pay a little higher price for labor and the manager will want first-class tools and equipment, not being willing to get along with old equipment as many individual farmers are forced to do.

Present day prices on machines and trucks run into large figures, and it is very easy when you have available cash to buy some high-priced machine that will not be worth its cost price to the business. The theory is that the equipment for the ten farms run under one management would be less than if run under ten different heads, but this does not prove out in practice.

The tendency is for the officers of the corporation to take the work a little easier than if they were working as individuals. There is more time to talk over problems and less action taken. If anything goes wrong, they, using a slang expression, simply "pass the buck."

Present day farming is conducted on a very close margin. It is usually impossible for farm managers and overseers to actually earn their wages. In other words farming does not warrant paying high wages and the placing of high overhead expense.

Mr. Mosher's plan for concentrating his help on a rainy day or for the harvest of certain crops such as wheat or hay has some drawbacks. It would not be advisable to hire all general utility men as the cost would be prohibitive. For instance one might hire a good chicken man that would not be of much value in the harvest field, packing apples, taking care of the dairy or vice versa. It would be necessary to keep some of the men on the road trucking or hauling almost continually on such a large place and I believe from experience that the manager would encounter some difficulty getting those men to thrash grain or clean out chicken houses. It would not be a wise policy for a manager to try and do this, although I agree that a certain number of general utility men could be jumped from one job to another to very good advantage.

I know of one corporation which owns about 18 farms averaging 100 to 150 acres are managed by one man with

By OUR READERS

bosses for the several farms and different departments. They market a high-class product, but I have been told and have good reason to believe that in approximately twenty years they have failed each year to come within \$20,000 of paying expenses. This I would consider is a well established business and ably managed but it shows the futility of large corporation farming.

I also know of a large farm, 600 acres, with a manager and department heads for the different products which has shown a very large yearly loss and I doubt their ability to ever show a profit by the sale of

according to his ability. If a man proves his worth he is given a good salary. If another is not worth so much he is paid less. This would cause jealousies in such a corporation as Mr. Mosher suggests. Then in the matter of work, if I understand his plan, there would be some persons who would stand back expecting to reap the benefits of the other fellow's work.

If a person is placed in a position that he will reap the entire benefits of his labor, it is an incentive to do his best. There are some persons who seem to be afraid to help along a worthy enterprise that would benefit themselves because they fear that others will reap a part of the reward of their labor.

There are others who watch for every opportunity to do the other fellow and they usually find such opportunities in corporations.

Such selfishness and designing has wrecked many a worthy enterprise and I think the corporation suggested would prove a means of furnishing such opportunities and for this reason would fail.—A. J. LEGG, West Virginia.

Memories of the Farm

YES, Johnnie and Susie may complain now. They may have the same natural dislike for the tasks of the old farm that they have for castor oil, but the habit of industry will get its arms about them after a time. In time, tasks will become a joy instead of being a burden—that is, if administered judiciously, like the aforesaid castor oil; for overwork and underplay for the growing child is abominable.

Think of the crop of fragrant memories that become a lifetime heritage to the child brought up on a farm. On a stony hilltop, an old New England farm, I spent my youthful days. The flavor of wintergreen and sassafras and birch and slippery elm lingers in my mouth to-day, three thousand miles away from the scenes of my boyhood days. Again I sit in the old schoolhouse and look out of the window at the fields of ripening grain that "crinkle like a lake" in the soft summer breezes—a wonderful picture that has hung on the walls of memory for five decades!

Not the least of farm memories is the recollection of the spring by the wayside, where the thirsty farm folk who passed by, paused to quench their thirst. Even in a drouth, when other springs failed, the flow of this spring seemed unquenchable in its delicious coolness and purity. How sweet was the draught that we drank from the coconut shell that always accompanied with the spring—the temperate and the tropic zone combined to give their exquisite flavoring to the old spring.

The wealth of clover blossoms and the busy bees, the odor of the new-mown hay, how the memories of them flow back to me like incense from the old farm days. The memories of yellow jacket and bumblebee are more pointed and painful, but the pain of a sting is soon forgotten while the delightful memories will abide forever. The haymow where my sister and myself wrestled, or turned somersaults from the great hand-hewed beams into the fragrant hay—how vivid these memories.

There are no columns of steel, no mountains of cement, no huge sky scrapers that rise, like some modern Tower of Babel, to deny us even a glimpse of nature in her grace and purity. Fortunately the children who have the privileges and joys of the farm bound in their bundle of life—will it not prove a lifetime heritage?—G. W. Tuttle.

farm products under their present scheme of management.

The bosses and general utility labor hired by a large corporation on the average are looking for a soft snap and will be able to get away with it much easier than when employed by an individual farmer. The bosses will work in their friends and petty politics will be played all along the line.

Crops and farm products are too uncertain in yield and price to run a farm on a business basis similar to other lines of business. This together with the necessary high overhead are the two main reasons why a large farm corporation will not succeed.—HAROLD R. HITCHINGS, Onondaga, County, N. Y.

Corporation Farming Has Too Many "Ifs"

A CAREFUL reading of R. E. Mosher's plan for corporation farming looks all right in theory and probably would be all right if the corporation consisted of stockholders, all of whom were persons of business ability and all could lay aside all selfishness and would all work for the success of the enterprise. However, in practice such a company would be hard to organize without getting in some persons who would seek every opportunity to get the advantage of the others. A successful corporation pays everyone who works for it a compensation

used to think how easily he has acquired his wealth and become head of a big business.

Another was an engineer on a local railroad. He has reached the stage where he has the largest passenger engine on the road. He has a night run and a very fast one, but he too looked tired, and a bit careworn. He had a long deep scar on his cheek and neck, and he walked with a decided hitch in his gait. I knew this was because some years ago he was in a wreck, and had a miraculous escape. As he sat by my desk he told me that two nights before when he stepped off of his engine at the end of his fast run, with a train of ten cars, several of which were filled with sleeping passengers, he felt so nervous and tired that he had asked for a little vacation of a week or ten days. He is getting big pay.

The third man I have in mind was a farmer. He was weather beaten, hale and hearty, but his hard work for the last two years had brought him but little, too little, for all the work he had done. He was somewhat discouraged, but he said "If I can get through another year, I am in hopes I may make good yet, for I hate to move to town with my family, even if I can get more pay."

I sincerely hope that he and thousands of other good farmers will continue to think this way, for if they don't, conditions are bound to be serious in this agricultural country of ours.

(Continued on page 93)

Get to market early

The early truck brings the top prices. The use of 1000 pounds of complete fertilizer to the acre will frequently add as much as \$100 an acre to the value of the crop, because it will not only increase the yield per acre, but will hasten the maturity of the crop, and bring it on the market earlier than otherwise. There are two things to remember: first, pin your faith to a reliable old brand like Royster's; and second, use a complete fertilizer in large enough quantities per acre to insure worthwhile results.

For helpful information about fertilizer, write freely to F. S. Royster Guano Co., Baltimore, Md.

ROYSTER

Allen's Book of Berries for 1923

If interested in making more money from your farm or lot and more health and pleasure from your garden, you should have a copy of this book. It tells all about growing STRAWBERRIES, the most delicious of fruits. For years they have been the leading CASH CROP wherever grown.

This Book of Berries gives simple understandable information about how and when to plant, how to prepare the land, and what varieties to grow for best results. Good plants, true-to-name, the best you can buy, are fully described and reasonably priced.

The information and descriptions are dependable, based on 38 years experience in growing, selling Strawberries and Strawberry Plants.

It is the most complete book of its kind—thoroughly reliable. It's free to any one interested. Write for copy today.

Where Pessimists Are Rare

Mixing Optimists, Milking Machines and Investments

By H. E. COOK

RECENTLY I attended a meeting of the Mannsville, Jefferson Co., Grange, one of the strong subordinates in New York. It was organized Oct. 23, 1873, and will be qualified for a semi-centennial next fall. They have one of the most beautiful and capacious Grange homes in our State and a membership of over 400 prosperous, high-class people. The de-

H. E. COOK

gree work, with tableaux and a highly trained drill team gave an artistic setting one cannot forget. As I studied the hall, the people, old and young, and the atmosphere developed, I couldn't believe that I was still in the same country that contains the hardships we read about every day in the news columns of the daily press and in our farm papers. Not one word, not even an expression denoting disappointments, was heard or seen. How could it be at a time, too, when we are passing through a great agricultural crisis and producing crops and products at far below cost?

Were these people so provincial that they had not heard of an agricultural depression, or were they getting more for their products than the rest of us, that gave them this easy, contented air? How am I to coordinate this community with the things I read about?

One may have the most practical theories, but they are of no use until properly adjusted into the system and plans for the day. Of course, where the owner is the milker, he can make quick adjustments, at times unconsciously, because he is both theorist and practitioner combined. But where one party works out the idea and another makes the application the idea must be systematized before it will pay. I find the most ideal methods and the largest crops are not always the most profitable ones. I have milked three times a day and made an increase of milk flow thereby, partly because of more frequent milking and partly because I fed more grain. But in our present business it is not worth while to get all of our cow washing and milking outfit into action with the necessary amount of scrubbing and sterilizing involved three times each day. We hear a good deal about "system" in industrial life. Well, it's equally important in farm life, when a monthly check must be made out for every movement, however small or insignificant it may be.

There are some things I would change if the power was at hand. One is to stop sending so many spare dollars out of our own communities and off our own farms to be invested in every conceivable activity and place on the map. As a rule, the individual amounts are small, but the aggregate is large. I have no way of finding out what percentage returns interest, what amount does not pay dividends, nor how much of the principal is lost forever, nor is it particularly important that I should

Where Real Pessimists Are Scarce

I am not going to try, for it isn't worth while. But simply to say that here is a fine farming section largely devoted to dairying, with a uniformly steady, reasonable income for the years past, with savings of one sort or another made each in their own way to tide over any lean time that might by chance come along. Whatever the size of my complaining streak when I left home, it was very much reduced after a visit to this place.

Probably growing out of the fact we are making certified milk with milking machines, I get occasional inquiries in regard to their practicability in comparison with hand milking. In a general way, I wouldn't advise anyone to install a milker, or not to do so. We have, I think without question, proven that they can be kept clean by following closely the Geneva methods, as developed by Dr. Breed and his co-workers. Our milking is not a family job, but is done entirely by paid labor, and less and less do we get men who like to milk by hand and who are thorough hand milkers. I know very well that not every cow takes kindly to giving her fullest milk flow to the mechanical milker.

We find cows that are shrinking prematurely and by changing to hand milking the shrinkage will be checked and sometimes a gain is made. We are trying now to partially at least take care of this problem by changing them to a stable used as an overflow or auxiliary stable not equipped with a milker and often by milking them by hand in the regular milking stables.

know, but the important thing I do know is, that if for only a single year we could have these savings spent locally on farms, buildings and live stock, an observer driving through would comment on the transformation.

So far as farmers are concerned, there seems to be a false notion, that is, it seems to me like a false notion, that these foreign or away-from-the-farm investments have the earmarks of real wealth, while the same amount put into fertilizers, or drainage, or improved working equipment in the home and on the farm, is that much more farming, and is locked up once for all. I'll wager, to speak in up-to-date business terms, that the total amount spent at home in any county in New York State will be more of a "liquid asset" dollar for dollar than the money sent out through our well-organized Bank Bonding Departments, and surely there are vast sums being taken by these agencies because leading banks now conduct a Bond Department.

I suppose this idea will be criticised as an effort to hamper the development of industry, but why, pray tell, should we not care for home industry first? Every dollar we spend on our farms changes hands many times right at home, and a good many people get a little of it, but when it goes away for investment no one here gets a farthing out of it, and actually we are letting our locality get ragged and helping to put a fringe on some place we have no interest in. I suppose this question, after all, resolves itself down to a case of local pride. Let us have more

Pruning the Pear

Quality and Quantity Call for Winter Work

THERE is no variety of fruit grown that so rewards in flavor as well as in production of quality and even in quantity as does the pear. Why, then, neglect this type of tree and let it develop

By HUGH FINDLAY

only makes a growth of two or three inches in a season, severe pruning will sometimes stimulate vigorous growth, providing the plant is free from insects and disease and planted in the right type of soil and drained.

In building a young pear tree the lower branches are cut considerably less than the upper branches, not only to give the tree the desired form but to throw the strength into and to encourage the growth of the lower limbs. This practice is quite important because in developing the lower limbs, one also encourages the growth of fruit spurs.

The pear tree may be pruned any time during the dormant period which is approximately from November through April. It has been found that pear trees pruned in March and April will heal over the wounds much faster than wounds made in November and allowed to dry during the winter. This is particularly true with large limbs; it matters but little when small limbs are cut off providing the buds are not out.

Shaping the Head

In training or shaping the head one must select one of the following forms: The pyramidal form, the natural form or the vase form.

The pyramidal form seems to be most popular among commercial growers and it certainly is practical where a tree like the Kieffer bears a heavy crop.

Fig. 1.—A double fruit spur with thirteen flower buds well formed. This spur is on five year old wood from a fifteen year old tree

regardless of shape and without repressive pruning which is so necessary?

The pear is pruned differently throughout various periods of its growth because it varies in its habits of growth. One habit that seems common to all varieties of pears is the production of fruit on spurs. Seldom does the pear produce fruit on the terminal buds. Its fruit spurs (Fig. 1) are located well in on the branches and along the leader stems.

The object then, is to prune and train that it may have a well balanced head with strong well arranged branches and thus prevent breaking when the tree is heavily loaded with fruit. This manner will also facilitate spraying, thinning, and harvesting.

Any pear tree that is pruned in such a way as to admit sunshine and air has less chance of disease getting a foothold and the fruit buds are more evenly distributed. It is true that more fruit buds and flowers may be formed on an unpruned tree but they are frequently out of reach and the fruit produced is inferior in quality and size as well as in beauty. While sunshine and air are both important factors in fruit production, one must not cut out the branches so as to expose the bark to the direct

Fig. 3.—A neglected pear (Kieffer) pruned back. Note the long fruit spurs along the limbs and trunk. Pruning in this case does not retard bearing but encourages it

This seems to be the natural shape of the Flemish Beauty, Bartlett, Sheldon and Duchesse d'Angouleme. In pruning and training a tree to the pyramidal form a single upright shoot which develops one year from the time of budding should have about one-half of its growth removed. The second year, one of the upper buds will take the place of the main shoot and elongate while a number of secondary branches will form mostly well up on the central shoot. The short and weaker branches will be near the ground. Three to five of these lower secondary branches should be selected and cut back to from three to six inches from the leader. The upper branches should be cut back and the strength thrown into the lower limbs.

The next pruning of this same form in early spring, is carried out by selecting the leader and cutting it back sufficiently to force the growth of buds which form the next whorl of limbs. With any of the standard varieties (Bartlett) this group or whorl of branches should not be over 16 inches from the ground. The Orientals (Kieffer) should develop the whorl of limbs not more than 20 inches from the surface while the Dwarf varieties are started about one foot above the surface soil. Each group of branches or whorls of branches should be pruned in such a way as to be longer than the whorl immediately above it. The lower

(Continued on page 101)

Fig. 2.—On left. Fruit buds on the ends of spurs. On right. Leaf buds on the previous year growth

rays of the sun. This frequently causes sun scald which injures the growth and health of the tree and diminishes fruit production.

A Danger of Too Severe Pruning

Too severe pruning frequently encourages a growth of water sprouts along the limbs which if allowed to grow will form such a tangled mass that the fruit buds and spurs soon fail to function. If the tree is weak and

810 Mechanic St. (43) Jackson, Mich.

Certified Blue Tag Seed Potatoes

are guaranteed to be healthy, high yielding and free of mixture.

For six years the potato acreage certified by this association has averaged over 200 bushels per acre, or twice as much as the average yield per acre of the state.

"Much superior to ordinary stock."—Oswego County Farm Bureau Ass'n.
"It is dependable."—Dutchess County Farm Bureau Ass'n.

"Has given more uniform potatoes and a better yield."—Schuyler County Farm Bureau Ass'n.
"Gave us an average increase of 64.5 bushels over the local varieties."—Warren County Farm Bureau Ass'n.

"It is good business to buy seed from crops that have been inspected by specialists and certified as suitable seed."—Onondaga County Farm Bureau Ass'n.

The Blue Tag on every Bag certifies that the stock has passed three inspections by specialists from Cornell.

Write us the quantity of seed potatoes you will need and the variety you prefer. Attractive prices will be quoted by return mail.

501 Byrne Bldg., Syracuse, N. Y.

Early Plants—Early Prices

Growers' Association Betters Market Conditions

NO part of the gardener's yearly duties

calls for a higher type of workmanship than the growing of early plants which are to be set out for the first crops and

PAUL WORK

which are depended upon to skim the cream of the early markets. The man who grows wheat out west assumes little responsibility beyond meager preparation of soil and the purchase and planting of seed. The rest he leaves to nature. The man who grows plants under glass undertakes to guide them along lines which are not natural. His control is relatively complete. He accepts responsibility for the character of the soil, for temperature, moisture and ventilation, all in addition to the selecting and planting of seed.

Comparatively few plant growers are masters of their art. Too many have failed to form a clear cut picture of the kind of plant that they want. Even possessing such a picture, they have failed to analyze the part which each factor plays in bringing the picture into reality. As evidence one needs merely to glance at the quality of plants so often set in the field. Ofttimes they are soft, spindling and unable to withstand cold and wind; ofttimes they are over hardened to the point of stunting, and so unable to spring into rapid growth with the first fine days. Seldom do they possess the uniformity which is the prime test of a real workman and which insures worth-while quantities for early sale and not a mere scattering from the patch.

Soil for Plant Growing

The time to prepare soil for plant growing is eighteen months in advance. In this way it is possible to secure a blend—not a mere mixture—that will be light and friable, will contain ample humus and plant food, will drain readily and dry off quickly at the surface, at the same time that it retains a fair degree of moisture for the young plants. A soil that dries too readily requires too much labor in watering. A soil that holds too much water cannot be readily dried out when there is a period of cloudy weather. The result is rapid, soft growth if not actual damping off. Soil for seedlings requires comparatively little plant food but when plants are nearly ready for the field, they are closely crowded and they make heavy demand on the nutrients to be found in the pot or flat or cold frame. Well rotted manure and bone meal are excellent.

When a compost heap is started months in advance, the basis may well be dense sod cut from a sandy loam soil. This is heaped up with an equal amount of manure, is kept moist and is turned occasionally to insure uniform decay.

The soil at hand in February may be modified by the thorough mixing in of very well rotted manure, or of sand, or of bone meal, according to need, but such a soil can never equal a good compost.

When to Sow Seed

Definite rules in plant growing are out of the question. Some like to start early and grow the plants very slowly. This takes valuable space, much care and extra coal, all of which might be used for lettuce production. Others grow the plants quickly and depend upon the last few weeks for hardening. The following suggestions are offered merely as a starting point for experience. Assume a place where the average date of last killing frost is about May 10 (If you do not know, ask the weather bureau or consult a frost map.) Tomatoes are usually set outdoors two to three weeks later than this, and cabbage three to four weeks earlier. Fine, twice-transplanted tomato plants can be grown in eight to ten weeks. Cabbage, is transplanted but once, and can be

By PAUL WORK

brought through and hardened in 8 weeks.

Growing plants in less time calls for higher temperature and more water. The longer time calls for lower temperature, less water and more ventilation. Six weeks is enough for lettuce and beet plants. Peppers and egg plants are handled about like tomatoes, but they require more care. Melons when started under glass, are shifted only to the field and four weeks is sufficient.

New York Market Gardeners Making Progress

The New York Market Growers Association, W. L. Hundertmark, Manager, has been striving for some months to better conditions for farmers on Wallabout and Gansevoort markets. The interest of the Manufacturers Association of New York was enlisted and a committee of that organization made a study of the situation. Their report has not been issued and will doubtless carry considerable weight. They recommend that speculators be excluded from the use of space intended solely for producers. They also recommend adequate comfort stations and water supply, that roofs be built over the stands, and that carrier service and charges be regulated. Action by the Board of Aldermen on an ordinance intended to legalize the special privileges which the speculators have acquired to the detriment of the farmers, has been delayed.

Vegetables in Cornell Farmers Week Program

Farmers' Week at Cornell is set aside as a time when the farmer may journey to Ithaca and learn what the staff of the College of Agriculture may have that might be of service to him. A full schedule for four days, February 13 to 16, deals with commercial and home gardening, including potatoes. Among the topics listed are: Vegetable Crops for the General Farmer; Standards and Grades for Vegetables; Better Seed, Asparagus, Celery and Cabbage, beside talks on insect and disease enemies. The New York State Seed Potato Growers' Association is to hold its annual meeting at this time and there are to be a number of sessions devoted to the production and selling of this crop. The New York State Vegetable Growers' Association is to take charge of an afternoon session, developing the service that growers may gain through organization. Full program may be secured by addressing the New York State College of Agriculture at Ithaca, New York.

State Growers Plan Annual Meeting

The New York State Vegetable Growers' Association plans to hold its annual meeting at Syracuse the first week of March. Detailed announcement will appear later. This organization has much to offer New York growers and the trip to Syracuse is worth while to take advantage of its service, to help develop its activities and for the sake of meeting and comparing notes with gardeners from all over the state

SPRAYING FOR PEACH LEAF CURL

ELMER WHITTAKER, MASSACHUSETTS

The curling of the leaves, which frequently occurs in early summer, is a serious matter, even though the trees put forth new leaves. The curled leaves weaken the tree. Leaf curl is caused by a fungus which lives over winter on the bark and buds, and attacks the leaves as soon as the buds "break."

Dormant spraying is necessary to prevent it. Commercial lime-sulphur used at the rate and strength of 1 to 8, is the only effective preventative. It may be applied before the buds "break" in order to be effective. Much of the spraying done for curl is useless because it is done too late. If the protective covering of the buds has broken, and the green shows as little as one-eighth inch, it is too late to use the spray. Another effective spray is Bordeaux mixture, 5-5-50. Both of these sprays must be applied after the leaves fall in the autumn, or before the buds burst in the spring.

HIRU

Improved and Pedigreed Seed

PEDIGREED BARLEY, Cornell's two favorites. Featherston No. 7, six row. Alpha, two row. For description see our advertisement January 20th issue or send for circular. Price, Featherston No. 7, \$2.00; Alpha, \$2.25.

PEDIGREED SEED OATS, cleaned through thoroughly equipped warehouse and treated for prevention of smut. Varieties—Cornellian, Victory, Crown and Golden Rain. For description see our advertisement January 20th issue or write for circular. All varieties, \$1.50 per bushel.

SEED CORN, New York State grown from selected ears in special fields.

Pedigreed Cornell Eleven and Improved Oil Dent. For description see our advertisement January 20th issue or send for circular. Screened, \$3.00 per bushel. Tipped and butted for accurate planting, \$5.00 per bushel.

SOY BEANS, Black Eyebrow, an early sort. Bids fair to be most popular sort in New York and Pennsylvania. Price, \$4.50 per bushel.

HUBAM SWEET CLOVER, scarified, high germination and purity. Grown in New York. Price, small lots, 50 cents per pound, postpaid. Bushel lots or over, 40 cents per pound.

All prices bags free, freight paid. All orders to be accompanied by 25% cash. 3% may be deducted if sending all cash with order.

Investigation through Farm Bureau or Agricultural Colleges invited.

What We Think of Corporation Farming

(Continued from page 89)

In years gone by I have often looked upon the man getting large wages with covetous eyes, but I am in a position now where I can see that all is not gold that glitters.

I still own my farm and have good men upon it, so I do not feel entirely lost, and trust that soon we shall see more profit for the farmer. The sooner the better for all.—CHAS. R. MELLON, Seneca Co., N. Y.

Our Duty is to Help Enforce the Laws

IN the December 23 issue of American Agriculturist, I read the title "Wrong Cannot Correct Wrong." I read this article with interest and I heartily endorse your views expressed concerning the Klu Klux Klan. I do not think that the Klan represents the true American principle, though Rev. Billy Sunday declared that the Klu Klux Klan is one hundred per cent American in an address at Charleston, W. Va. last winter. This was after Klan members had presented him publicly with a nice fat purse. It may be that "Billy's" declaration was literally true since the Klan does not permit foreign born citizens to join them. But does this represent the true American principle for which our fathers fought? Is this the principle for which Lafayette fought by the side of General Washington or Baron DeKalb and Count Pulaski died on American soil fighting by the side of American born citizens though all of them were foreigners? I am not a Roman Catholic myself, but when it comes to an organization, the main principles of which are founded upon prejudice against foreign born people without regard to their character and against a great church that recognizes Jesus Christ as the savior of the world, which sends out its adherents to care for the helpless, the poor and needy in Jesus' name; I am suspicious of that organization. We have enough to do to keep ourselves straight and to do what good we can without appealing to prejudice against others to bolster up our own ideas.

Again I read on same page a quotation from Patrick Henry: "It is foolish to cry Peace! Peace! when there is no peace." I think this is no less true to-day than it was when it was uttered, but in somewhat a different way. Before the Prohibition Amendment was adopted the Government in a way was in partnership with the whiskey powers by granting license, they granted the privilege to certain persons to make drunkards of the balance of the people. This made it to the interest of the privileged class to enforce the law against bootleggers, so we had few moonshiners and bootleggers. Now it is different, the privileged class must either go into other business or else turn bootleggers. Many of them have organized themselves into a regular lawless bootleggers organization. We have men of character and principle standing for law and order and some who slip into places of responsibility who court favors of the lawless element. Many otherwise good citizens are standing off excusing themselves with the declaration that it is the officers' business to enforce the law. It is the officers' duty to enforce the law, but he cannot do this unsupported. He must have help. We have a State officer in this State, West Virginia, in the person of W. G. Brown, State Prohibition Commissioner who has the courage of his convictions. He is honest, aggressive and fearless in the discharge of his duty, still we have bootleggers and moonshiners in the State, but I do not think so many as we had a few years ago. The fight is on against lawlessness and no good citizen should cry peace! peace! until the law against whiskey selling is properly respected all over this broad land of ours. Is it not the duty of every good citizen, whether American or foreign born to stand for enforcement of law? Can we afford to leave this enforcement of law to an organization founded upon national and religious prejudices?

I should hate to get along without the good old reliable American Agriculturist.—H. R. EATON, Cortland County, N. Y.

My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."
—A. Y. Edwards.

EDWARDS ENGINE

Try This Remarkable Engine FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1 1/2 to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work. Change power as needed. It is a 6 H. P. when you need 6, or 1 1/2 H. P. when you need only 1 1/2, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous. It is many engines in one. Operates with kerosene or gasoline. Easy starting, no cranking. Low factory price—now lower than before the war. The greatest gas engine value on the market. And you can prove all of these statements to your own satisfaction—try the engine yourself—free of cost or obligation.

What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Robert Gruett, of Spokane, Washington, says: "It has given entire satisfaction. Furnishes steadier power than my old engine which weighed twice as much. It is portable, adaptable and free from vibration. If I sold my Edwards today, I would order another tomorrow."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer, threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

Clarence Rutledge, of Manitoulan Island, Ontario, says: "Have given my Edwards three years' steady work

and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines, and the Edwards beats them all."

Kurt Kruger, of New Brighton, Minn., says: "I run a 30-inch wood saw, 8-inch feed grinder, also a pump jack. You cannot beat the Edwards for general farm work."

Free Trial Offer

Now—we want to prove our claims to you. We want to send you an Edwards engine for absolutely free trial. Just send us your name and address and we will send immediately complete details about the Edwards engine and about our remarkable free offer. No cost or obligation. Write now.

For "nice" cultivation

Safer than a horse cultivator, faster than the old hand hoe, Planet Jr. No. 12 double-wheel hoe gives you the ideal combination of clean yet speedy hand cultivation. It is the riding cultivator principle applied to a wheel hoe—cultivating both sides of the row at once, running close to snake out persistent weeds, always under the operator's control. It clears plants up to 20 inches high, and cultivates equally well between the rows. Large market growers use No. 12 in batteries. Every farm which grows truck for sale or for the home table will find it profitable in time saved, in better results, and good for years of useful service. It's a Planet Jr. implement—that's why. Write for complete catalog of Planet Jr. seeders and cultivators—hand, horse and tractor.

Big Times at Ithaca

Farm News From Farmers of New York

THOUSANDS of farmers are looking forward to a trip to Ithaca some time during the week of February 12 to 17, to attend the Farmers' Week at the New York State College. The program announced by the college justifies the anticipation of those who expect to attend.

The outstanding topics to be discussed are those relating to marketing and financial problems, but a good deal of attention is given to entertainments of various kinds, and special conferences of different interests and groups are scheduled for nearly every day. Some of these conferences are a special home-makers' conference throughout the week, and a conference of grange masters and lecturers, a dinner of the state federation of horticultural societies and floral clubs, a meeting of the state co-operative seed potato association, the annual meeting of the state co-operative poultry certification association, a meeting to organize a state wide poultry council, conferences on the rural community, the rural schools, the country church and a meeting of editors on daily and weekly newspapers.

Many Prominent Speakers on Program

Special attention is to be given in the program to the interests of dairy-men. Some of the speakers on the dairy program include C. W. Larsen, Chief of the Dairy Division of the United States Department of Agriculture; E. R. Eastman, Editor of American Agriculturist; H. E. Cook, well known Dairy Farmer; W. H. Marcusson, Assistant Manager of the Borden Milk Company; G. E. Hogue, Assistant Commissioner, State Department of Farms and Markets.

Other speakers include men of national reputation, such as Eugene Davenport, writer on agricultural subjects; Charles H. Judd, of the University of Chicago, who will speak on the problems of the rural schools; Hon. Sidney Anderson, Chairman of the Congressional Committee of Agricultural Inquiry; Sherman J. Lowell, Master of the National Grange and Enos Lee, President of the State Farm Bureau Federation.

Many of the admirers of George F. Warren will make the special trip to Ithaca purposely to hear him speak on financial inflation and deflation on Tuesday; the relation of industrial conditions to agricultural conditions on Wednesday; and the prices of farm products and probable future prices on Thursday.

There will be entertainment programs for each afternoon and evening, which include readings of French-Canadian poems by Prof. George A. Everett; reading of "Enoch Arden" with piano accompaniment, by Georgé C. Williams of the Ithaca Conservatory of Music; a lecture on the home life of birds by Prof. A. A. Allen; Prof. Eugene P. Andrews will give an illustrated lecture describing his recent thousand mile trip on the Nile River; Mrs. Anna Botsford Comstock will favor with an illustrated lecture on farming in Sicily; Prof. J. T. Quarles, Cornell University organist, will give an organ recital in Bailey Hall, and all will join in singing.

Other evening features will include the following: Monday evening, a speaking contest, debate and musical numbers by winter course students; Tuesday evening, concert by the Cornell University student orchestra under the leadership of George L. Coleman; Wednesday evening, the pageant of farm life written by Mrs. G. Thomas Powell of Glen Head, Long Island, which was given at the State Farm Bureau Federation meeting at Syracuse; Thursday evening, the annual Eastman Stage, student prize speaking-contest on agricultural subjects; and the Kermis play "The Meddlers" written and produced by students on Friday evening.

STATE BREEDERS HOLD BIG MEETING

The recent successful annual convention of the New York State Breeders' Association in Syracuse was marked by some very constructive discussions of the outstanding agricultural problems of the State. C. F. Bigler, president of the New York Holstein Friesian Association, suggested a plan that promises

to bear fruit of great value to New York State farmers. He outlined an idea of all non-commercial farm organizations of the State joining together during the same week each winter for annual conventions, in connection with which a winter show of farm products would be held at the State Fair Grounds.

The plan elicited much favorable comment, as it was realized that state-wide organizations now often hold annual meetings in different cities or the same city at the same time and cause much inconvenience to members, who cannot attend both. A combined meeting would also allow officers to secure the most prominent speakers in the country for the event. The winter show plan will probably be taken up for definite action at a meeting of farm organization officials at Farmers' Week at the State College of Agriculture, Ithaca, in February.

A large number of eminent men spoke at the meeting, including Chancellor Charles Wesley Flint, Syracuse University; Berne A. Pyrke, Commissioner of Farms and Markets; Lieutenant Governor George R. Lunn; Dr. R. W. Thatcher, Director of the New York State Agricultural Experiment Station, Geneva; A. L. Brockway, President of the New York State Horticultural Society; and others. Harry S. Gail of East Aurora was re-elected president for the year.

FARM NEWS OUT OF ALBANY

There is considerable discussion among Legislators regarding suggestions for helping the rural schools. No bill has been introduced as yet but a great deal of interest is being shown.

Governor Smith's suggestion that the Commissioner of Farms and Markets should be appointed directly by the Governor instead of by the Council of Farms and Markets as at present, is causing a good deal of talk in Albany. It seems to be general sentiment among up-state men that there has not been sufficient time elapsed as yet to judge the work of the Department under the new law of last year.

A bill has been introduced to amend the Donnelly Act to repeal the amendment which gives exemption to farmers in cooperative organizations. This bill should be carefully watched.

Bills have been introduced to provide that the State build and maintain bridges on what is known as State Roads and that the State and County build and maintain bridges on roads known as State and County highways. The object of this legislation is to relieve many of the towns of the State of low assessed valuation from heavy bonding indebtedness which would be necessary for them to provide bridges that meet requirements of the State Highway Department.

IN WESTERN NEW YORK

Genesee Co.—This winter is proving to be most serious. The temperature has hit the low stop three times already. Snow storms have been severe and most of the roads are practically impassable. Fuel has been very scarce and folks have been compelled to use soft coal and coke instead of ordinary coal. Prices on crops are coming around better. Wheat is now bringing \$1.35 a bushel, potatoes are 60 cents a bushel and apples find ready market at 60 cents. Butter brings 55 cents a pound, eggs 65 cents a dozen.—J. C. J.

Ontario Co.—We have had several important meetings of late. The Agricultural Society held its election of officers, the Hopewell Grange installed new officers and there have been several Farmers Institutes. Farmers are mostly concerned about coal, having taxes reduced, and in the prospects for next season. This is not a milk county so we are not much interested in the prices of milk. Wheat is \$1.30, oats, 70 cents, barley, 90 cents, corn, 75 cents, bran, \$32 a ton, dressed pork, 13 cents, lambs, 12 cents, beef, 6 cents, hay, \$10, red beans, \$7, potatoes, 45 cents a bushel,

butter, 45 cents, eggs, 40 cents a dozen.
—E. T. Brizzee

Wyoming Co.—Tax time brought out the fact that many farmers have not sold their crops, or if they have sold them prices are too low to meet expenses. Potatoes are moving slowly at 45 cents, eggs 50 to 55 cents, butter 45 to 55 cents. I think the farmers are generally feeling a little better about the milk situation. Although the League is not gaining in membership, the old members seem to feel much better satisfied than they did two months ago.—L. M. F.

IN THE HUDSON VALLEY

Saratoga Co.—The outdoor work has been greatly retarded by the unusual amount of snow. Country roads are badly drifted and in many localities they are impassable. Very little ice has been harvested as yet. Local dealers are paying 55 cents for butter, 55 cents for eggs. Good cows are in strong demand at very satisfactory prices. The snow has been so deep that farmers have had difficulty in cutting wood. The help problem looms large and serious as the spring draws near.—E. S. Rodgers.

Greene Co.—Heavy snows have stopped work in the woods and have also delayed mails. Last season's apple crop was large but most of the fruit was sold for low prices except where orchards were sprayed. It is very evident here that farmers will have to spray if they are to get good prices. Not much call for cows; beef, 10 cents, dressed pork, 10 to 14 cents, hay, \$10 to \$12, butter, 50 cents, eggs, 45 cents. Farm help is very scarce at \$2 a day. We can look for lower production next year as a result of scarcity of help. In our section a large number of city people are buying farms that do not produce crops. These estates are keeping wages up.—J. A.

ALONG THE SOUTHERN TIER

Broome Co.—The Farm Bureau under the direction of Jasper Eastman is more than usually active this winter, its work covering all parts of the county. The meetings held so far have been well attended.

The decision of Referee Merwin at Utica last week, establishing the legality of co-operative marketing of milk, as determined in the case of Barnes vs. the Bordens Milk Products Co., is being received with a great deal of satisfaction by the dairymen of the League Association, Inc., of this vicinity. This decision will have a marked effect, it is believed, upon the number who will take advantage of the February withdrawal period to become non-poolers. The defection will be slight in Broome and adjoining counties.

Efforts are being made by the different milk men of Binghamton to prevent the promiscuous use of bottles. The movement was started by the Cloverdale Creamery Co., which brought suit against another dealer for accepting from consumers and using Cloverdale bottles without warrant. In the courts this case was decided favorably to the plaintiff, and now all dealers are vigorously trying to recover bottles belonging to them. They appeal to consumers to return empty bottles promptly, stating that every bottle means six cents.

Ice, ten inches thick, is being harvested from the ponds and still places of creeks in Broome County.

Farmers who have not good wells are having trouble to get water for their stock. There has been no thaw for weeks sufficient to replenish the usual water courses. Snow now stands about a foot and a half deep.

A new \$235,000 school building is about to be erected at West Endicott. This is a fast-growing part of the original village of Endicott, where the Endicott-Johnson people are building new shops.—E. L. V.

Mr. Van Wagenen's article and our editorial on the Country Church problem struck a responsive cord in the hearts of farm people. Over 100 letters on this subject have already been received, with more coming every day. You may look forward with anticipation to the publishing of the best of these letters in a late February issue of American Agriculturist.

A COMPLETE POULTRY LIBRARY

Following are five books on the poultry industry that cover the subject not only in a scientific, but popular and practical manner. It deals thoroughly with every phase of the poultry business. This set of books should be in every man's living room or library, who has a poultry business of any size at all.

MATING AND BREEDING OF POULTRY

By Harry M. Lamon and Robert R. Slocum. This book may be properly termed the "Key to the Standard." It describes in detail the proper matings to secure birds that approach the ideal. Every follower of poultry shows should have this book. \$2.50

POULTRY BREEDING AND MANAGEMENT

By James Dryden. A very recent book written for the man or woman on the farm or in the poultry business who is interested primarily in making poultry pay. \$2.00

AMERICAN AGRICULTURIST, Inc.

POULTRY FEEDS AND FEEDING

By Harry M. Lamon and Alfred R. Lee. A book just off the press that covers the subject of economical and proper feeding from the very standards. The authorities are practical and expert poultrymen. \$1.75

DUCKS AND GESE

By Harry M. Lamon and Robert R. Slocum. A most complete, practical and helpful book on this popular subject ever written. This is the most recent publication on the subject and covers every phase of it. \$2.00

TURKEY RAISING

By Harry M. Lamon and Robert R. Slocum. No turkey raiser either experienced or beginner, can afford to be without this new book on the subject from the pens of two of the foremost poultry authorities in the United States. A complete treatise on the subject. \$1.75

Madison Square Poultry Show Breaks All Records

WITH the opening of the National Poultry Show in the Madison Square Garden, New York City was treated to a barnyard chorus of 7,000 voices. In fact, when a visitor stopped in to the show from the cold and busy streets surrounding the Garden, the atmosphere changes immediately. It called to mind a bright, balmy, sunshiny spring morning when every bird in the farm flock is cackling and making a racket in general. The chorus is all the more varied, for the caroling of the 7,000 birds includes everything from "canaries to ostriches," as one visitor rather emphatically described it.

This year's show surpasses all former exhibits in numbers and in quality of birds. Every strain is represented by magnificent individuals. It seems as though White and Barred Rocks, Wyandottes and Orpingtons are being bred larger every year. Another breed in the utility class that is arousing a great deal of attention this year is the Jersey Black Giant—an ideal utility bird. Its feathers are black, its skin is yellow and its egg is white.

The outstanding criticism of the show was the lack of proper identifying labels on the cages and pens of the various birds. Unless the visitor cares to pay 50 cents for an official catalog, it is impossible to tell anything of the exhibit, unless all of the breeds are known, and there are very few who know all of the various breeds when fancy fowls are taken into consideration. The show has overcome this in a very small measure by labeling the winning pens, naming the breed when designating the premium awarded. However, these labels are so small that the average visitor will pass by without noticing them.

This is not only true of Madison Square Show, but practically every other poultry show. If advertising in the catalogs is insufficient to pay for the cost of publication, then each individual exhibitor should be taxed pro rata for his space in the catalog. At any rate, the tax should not be put on the visitors. It is like a double admission proposition if the whole show is to be enjoyed.

VALUE OF MILK PREDOMINATES AT HEALTH SHOW

Probably the most interesting exhibit to adults, as well as to children, at the Public Health Exposition held in New York during the week of January 22-27 was the "life-sized" map of Healthland, a reproduction on a huge scale of the drawing shown in American Agriculturist some weeks ago.

Over the green palings of the fence which protected this papier-mâché marvel from childish handling hung children by score, fascinated by the real train which ran around the shining track, by the giant milk bottle signal towers, the running waterfall at Drinkwater, the pumpkin in which the famous Peter dwelt and the baseball field with its poster "Spinach on the Home Plate," "If you get one carrot steal second," "Strike out Coffee and Tea," and other amusing signs. The youngsters were weighed and told whether they were below grade or correct, and were given free slides on a chute from the top of a giant milk bottle. This entire exhibit was staged by the Child Health Organization of America.

A close second in the interest elicited from the crowds which kept the Grand Central Palace filled every day and evening was the corner where four pure-bred Holsteins sent to the show from Fishkill Farms by their owner, Henry Morgenthau, Jr., munched stolidly away in their stanchions. These Black and White record-holders were milked at regular intervals by mechanical milkers and a large audience always gathered for the process.

Milk posters, milk demonstrations, milk bottles of gigantic size, met the eye at every turn. It was very nearly a milk show, and every one went away with pockets full of literature on the wisdom of using it liberally. The only other "live stock" at the show consisted of a triple exhibit of rats, puppies and pigs, two of each, one milk fed, the other "live stock" at the show consisted of the diet. In each case, although the animals were the same age, to a day, they were an amazing contrast in size and strength.

Jersey Farm Legislation

Penn State Campaign Passes Million Mark

AMONG the important bills introduced in the last two weeks in the New Jersey Legislature, and now in the hands of the Senate Committee on Agriculture, is Senate bill No. 64, which would encourage the more efficient distribution of agricultural products in the State. Its purpose is similar to Article 13 of the Agricultural Law of New York State and is to provide for the incorporation of farm associations not conducted for profit. Another measure also relating to agricultural associations would prevent the circulation of untrue statements on the financial condition of cooperative associations and the breaking of marketing contracts or agreements made between such associations and a member.

As in many sections of the East, deer have become decidedly troublesome in some parts of New Jersey and in an effort to assist farmers who are suffering damage, the New Jersey Federation of County Boards of Agriculture has fostered a bill now in the Senate to change the hunting season for killing deer. The proposed measure would change the open season from four separate Wednesdays to consecutive days from December 16 to December 22, and permits the killing of does more than one year old in Ocean and Atlantic Counties where the excess of deer are a detriment to farm interests.

Bills Already Introduced

Bills of interest to farmers already introduced in the Assembly include a measure to require the registration of owners for all motor vehicles using the public highways and the giving of a bond approved by the Commissioner of Motor Vehicles to an amount of \$5,000. Another bill aims to extend the licensing plan on dogs as in the new law of last year, which is in principle the so-called sheep law recently put on the statute books of most of the Eastern States. It gives the right to municipalities to repeal their ordinance provisions on the licensing of dogs and accept the new State law with its more stringent requirements.

The Committee on Taxation in the Assembly now has before it Assembly Bill No. 27, which makes it unlawful for any county or municipality to exceed the tax rate of last year for the coming year. The taxation problem has become more acute each year and the agricultural interests of the State are uniting with others to limit the extent to which taxes may be forced. The bill also provides for a definite reduction in the taxes on real and personal property commencing with 1924 and running until such time as the tax rate is reduced to \$2 on each \$100 valuation, the sliding scale being five points each year.

Notes from the Organizations

At the annual meeting of the New Jersey Alfalfa Association, recently held in Trenton, N. J., the following officers were elected: President, George N. Rexon of Haddonfield, N. J.; Vice Presidents, D. D. Walker and H. R. Cox of New Brunswick, N. J.; and Treasurer, Dr. Frank App of Trenton. It was reported that more than 15,000 acres of alfalfa were grown in New Jersey last year, while an even greater acreage is promised for the coming season.

Indications point to a big "crop" of baby chicks from the large hatcheries of Hunterdon County, N. J., while demand for chicks from flocks of known parentage likewise promises to be large. Officers of the New Jersey State Poultry Association for the coming year are: President, B. S. Ellis of Vineland; Vice President, J. I. Lyle of Plainfield; Secretary, William E. Allen of New Brunswick, and Treasurer, Harry Ober of Lakewood.

NEW JERSEY BEEKEEPERS

The recent Annual Convention of the New Jersey Beekeepers' Association was an exceedingly interesting one. The attendance was smaller than at some previous conventions, but the interest, I believe was much greater.

Discussion of hive sizes seemed fairly

to indicate that those beekeepers that have tried the larger size hive, have been disappointed and that they felt at this time that the standard 10 frame Langstroth hive is still the best hive to use. The food discussion seemed to show that for New Jersey conditions, bees should be fed approximately 10 pounds of sugar syrup in the fall after brood-rearing had ceased and that they should also be insulated with some sort of packing material. The food which the majority of bees in the State have in winter is of such a nature that there is considerable accumulation of feces and in those winters when the bees do not have frequent opportunity for flying, there is a considerable loss from dysentery. It would seem, therefore, that both insulation and sugar syrup feeding for a greater part of New Jersey at least are necessary for best results.—E. G. CARR.

PENN STATE CAMPAIGN PASSES MILLION MARK

The Pennsylvania State College emergency building fund campaign is now well started on its second "lap" in the drive for the goal of \$2,000,000. The half-way mark of one million was reached a few days ago when a check for \$21,349 was turned over by the alumni athletic advisory committee of the college, representing the net proceeds of the Tournament of Roses football game played by the Penn State team in California on New Year's day.

This gift, which is the largest single subscription recorded in the first million dollars in pledges, will be used in furnishing the new Varsity Hall or athletic training quarters building to be erected through the emergency building fund. It is expected that work on the construction of this building will start during the present year.

The campaign is progressing slowly but surely, over one-third of the graduates having already subscribed.

SPRAYS 10 ACRES A DAY
Just walk and press the nozzle—no work—no trouble.

SMITH'S NO. 22 BANNER COMPRESSED AIR SPRAYER

For spraying potatoes, vegetables, fruit trees, grapes and berries. For whitewashing, spraying, disinfectant, fly oil, etc., for washing autos and windows—It does many jobs and does every job well.

Lyman's Genuine Grimm Alfalfa

The original field planted by Wendelin Grimm in 1857, still bearing.

Heavier, Enduring Crops

Common alfalfa winter-kills, Lyman's Grimm, acclimated to Northwest temperature extremes through 65 years of culture, endures year after year, yielding full, perfect crops. Comes directly from the strain originally imported by Wendelin Grimm. Develops earlier in spring than any other variety. Three to four sturdy crops each year. Affidavit of genuineness accompanies every order.

All seed scarified, assuring maximum germinating power. Only a thin seeding necessary to produce a heavy crop. Bears autumn cutting or pasturing without injury. The cheapest protein feed you can buy—not a bit of waste. Fourth growth makes ideal hog pasture.

Test this wonderful species for yourself! Free sample upon request. Also booklet describing A. B. Lyman's discovery of Grimm Alfalfa. Mail the coupon today!

Farmers Forced to Organize

Because They Were Between Two Fires

ONE of the great industrial and economic movements of the last half century has been the centralization of the control and operation of industries. The village manufacturers have been displaced by great corporations owning and operating large central plants with sales agencies throughout the civilized world. Each of these great organizations is composed of many persons, united in corporate form, and engaged in collectively producing and selling their respective wares. From them the farmers must purchase their supplies.

While these great organizations sometimes abuse their power, as a whole, they stand for efficiency and economy, and are now such a part of the business structure of the country that their overthrow would stagger commerce. Nor was this process of centralization in manufacturing industries alone. The purveyors of farm products did likewise until in course of time farmers found that usually the buyer of their products was a non-competitive one, and that they were the one great group that bought at retail, sold at wholesale, and in both cases at prices dictated by others.

Finding themselves thus caught between the upper and lower millstones, farmers sought a remedy, and soon found that they alone were to blame for their condition, in that while this process of centralization was going on all around them, they and they alone continued to attempt to market singly. Through great tribulation they came up to higher ground from whence they could see that it was their clear duty to follow in part the course of those engaged in other industries and to unite in large numbers and engage in collective marketing.

The past ten years have therefore witnessed a remarkable growth and development of farmers' cooperative marketing associations. In ever-increasing numbers they have been formed and it is estimated that through them one billion dollars' worth of farm products will be marketed in the year nineteen hundred and twenty-three. Experience has shown that this cooperative movement will in due time eliminate the speculator and gambler in foods, but need not mean the elimination of middlemen performing necessary functions.

Wages or Commissions?

It is immaterial to farmers whether the expenses of distributing their products are paid in the form of wages or by a commission to old agencies having marketing facilities if and only if, such old agencies distribute economically at a fair profit and do not use their control of marketing facilities to unduly depress prices to farmers or to unduly increase prices to city consumers. Whenever and wherever such old agencies refuse to so cooperate farmers do not hesitate to create distributing agencies of their own.

In solving the complex marketing

problems, it has been found that, as to commodities highly perishable, as is milk, means should be adopted by which all surplus may be manufactured into by-products, and as to all commodities, marketing should be orderly so that each producer may always have a market and that each city should always be supplied with quantities adequate, and never more than adequate, to its needs.

The general public now recognize that these associations are for the public good. Such opposition as they encountered in the early days was based upon a misunderstanding of their objects and purposes. By marketing their products efficiently farmers will receive a higher price without increase of price to consumers, while such higher prices to farmers stimulate production, insuring adequate future supplies.

In a larger way, these associations will promote public good, in that through them the farmers will take the place to which they are entitled in the business life of the country. As members of these commercial organizations, farmers must earnestly consider economic problems theretofore seen as through a glass, darkly, and the discussion of which was considered as more or less academic. Selling their products singly to the first-comer, they were re-

mote from world activities and world problems. Now, the disorder in Russia and the cheap money of Germany are reflected in the check farmers receive from their association.

It has been charged that these associations are socialistic. This is error. They are an aggressive negation of socialism. There is no community of property, but only a temporary blending of products for marketing, and this for private gain. Based on the right of private property, they can not exist with State socialism and it may be that they have come in to being for such a time as this when by their weight thrown into the balance, they may be the deciding factor in preserving the ancient landmarks, while by increasing the buying power of forty million people, they bring increased prosperity to all industries.

POOLED PRICE LEADS COUNTRY

Some statements by Albert Manning, Secretary of the Dairymen's League Cooperative Association in regard to the December pool price are so important that they should have consideration by every farmer. Mr. Manning says:

"So far as we have received reports as to the prices received by producers in other large milk consuming centers of the country, our net pooled price of \$2.75 exceeds any other price from 25c to 50c per hundred and upward."

Progress is determined by comparisons. The net pooled price of \$2.75 for December compared with price for

Creamery Package Mfg. Co. 350 West St., Rutland, Vt.

GREEN MOUNTAIN SILOS

UNADILLA SILOS

Easy to Use

A Silo is in use twice daily for 6 or 7 months. Convenience and labor and time saving is important.

In a Unadilla, silage is shoved out at the door level. Gravity carries it "like water over a dam".

The air and water-tight doors cannot stick. There is, therefore, no pitching of tons of silage overhead.

The door fasteners form a permanent safety ladder—convenient, secure.

Write today for big, new illustrated catalog which shows Unadilla features of convenience not found in any other silo. Get our special early order discount offer.

Steel Wheels

Cheaper than any other wheels, figuring years of service. Make any wagon good as new. Low down—easy to load. No repairs. **COST LESS** Reduced prices Catalog free. EMPIRE Mfg. Co., Box 279 Quincy, Ill.

December, 1921, shows an increase of 36c a hundred, or about three-quarters of a cent a quart. Again the average December price for 10 years preceding 1916, when the League first began to operate, was \$1.68, on a basis of 3 per cent milk at the 200 mile freight zone. Again the comparison is in our favor, although it is impossible to determine exactly just what part of this difference in price may be due to the general price levels to-day compared with 1916. But to go a step further to substantiate the claim for the result of organization, we submit the following New York pre-war prices of December, 1913, compared with December, 1922:

	Dec. 1913	Dec. 1922	Per cent
Milk, cwt....	1.625	2.75	169
Corn, bu.....	.81	.83	103
Wheat, bu....	.93	1.18	127
Hay, ton.....	15.30	14.10	92
Potatoes, bu..	.80	.60	75
Apples, bu....	.97	.81	84
Oats, bu.....	.47	.51	109

This again shows that the price our pooled members are receiving for their December milk is 169 per cent of what the farmers received before the war and before the League was in operation. Also the percentages prove that milk has increased in far higher percentage than has the above list of staple farm products. This indicates that the great financial handicap under which our members are laboring at the present time is not due entirely to the low price received for milk, but to the still lower price received for most of our staple farm products and the continued high prices of practically everything we must purchase.

These comparisons indicate progress. These milk prices prove the advantage of cooperatively marketing our milk and remove any question of doubt as to the necessity, if we are going to continue to progress, of standing by the organization.

Conditions are daily looking brighter, and regardless of reports by those antagonistic to the League as to the possible number of February withdrawals there is no question in the minds of your officers but that these reports are greatly over-estimated and that the situation, so far as the League is concerned, looks brighter than it has for a long time.

SHIPPING MILK BY TANK CARS

Considerable interest is developing in milk sections in the use of tank cars for carrying milk and cream. These cars have several containers, each holding approximately 645 gallons. The containers are so insulated that there is little variation in temperature, no matter what the weather is.

Recently in sending a car of milk from New York to the National Dairy Show the temperature of the milk came up only two degrees in a trip of sixty hours. Arrangements are made so that the containers can be lifted by cranes from the car and loaded on trucks to be taken to the bottling stations. It is claimed that the use of tank cars will save trucking, freight rates and much labor, and that we may expect a considerable development of this means of transporting milk. It is predicted that the area from which each city gets its milk will be widened.

COW TESTING ASSOCIATION KEEPS COSTS DOWN

On July 1, 1922, there were in operation in the United States 513 Cow Testing Associations, including 12,458 herds and 215,321 cows. Wisconsin and Minnesota, two of the largest dairy states, showed great gains in testing associations. During the year the number in Wisconsin grew from 103 to 127. Incidentally, these two states are progressing very rapidly in all dairy matters, including their methods of marketing dairy products. Eastern dairymen have got to watch their step to meet this high-class competition of the West.

One of the ways to meet competition is to keep the cost of production down. There is no better way of doing this than in keeping records in Cow Testing Associations, or otherwise, to find out what each individual cow of the dairy is doing.

How do you account for this?

Why is it that there in use to-day as all For just one reason, of several millions of users over a period of forty years, who have found it the most satisfactory, in that it skims cleaner, lasts longer and is easier to operate and clean than any other.

are approximately as many De Laval other makes of separators combined? which is based on the actual experience of several millions of users over a period of forty years, who have found it the most satisfactory, in that it skims cleaner, lasts longer and is easier to operate and clean than any other.

98%

Of the best creameries use De Laval Separators~

The creameryman knows the best cream separator. Practically all of them use De Laval. Why? Because they have found by testing the skim-milk, and by experience, that the De Laval is the most profitable. They know that a poor separator can soon waste all their profit and that a De Laval soon pays for itself. The De Laval you use is built on the same principle as the creameryman's.

86%

Of the exhibitors at the National Dairy Show use De Laval Separators

At the 1922 National Dairy Exposition an investigation among the exhibitors of purebred dairy cattle disclosed the fact that 86% of them use De Laval Separators. These exhibitors of purebred dairy cattle are the cream of the world's best dairymen—they know the best separator and use it. Butter made from De Laval cream also won first place in every class.

64%

Of the Separators in the leading butter state are De Laval~

More butter is made and more cream separators are used in Minnesota than in any other state. According to an investigation by a prominent farm paper, 64% of the cream separators in Minnesota are De Laval—almost two out of every three. A remarkable record—which simply drives home the fact that the more people know about separators, the more they appreciate De Laval.

51%

Of all cream Separators are De Laval~

—according to an investigation by a group of prominent farm papers of wide circulation. There are, still, many inefficient and worn-out separators in use today which are wasting enough butter-fat to pay for new De Laval. Get the most out of your butter-fat with a new De Laval. See your De Laval Agent or write us.

Send for free book "Molasses a Feed"

More Milk

Molasses adds materially to the palatability of the ration fed to dairy cows. And that means the cows enjoy their food more—get more nourishment out of it—and that results naturally in more milk. And for horses, hogs and sheep molasses is just as palatable, just as valuable. The price of good molasses is very low now.

(Continued from page 87)

made in local blacksmith shops. The singletrees had no iron on them, but simply a notch cut on each end.

"Our grain was cut with a reaping-hook, a blade about ten inches long with an iron rod extending out about twelve inches and bent, with a wooden handle. We caught the top of the grain with one hand and used the reaping-hook with the other hand. Next came the cradle. The blades for the cradle were shipped in, but the balance of the implement was made locally. The cradle and reaping-hook were made in local blacksmith shops.

"The first wagons we had were ox carts with two wheels. They were made in the local blacksmith shop. Then came a rudely constructed shop-made wagon, made by local men. Our first manufactured wagons were shipped in from Tennessee after 1846."

In 1842 Cyrus Hall McCormick sold seven of his "Virginia Reapers," first practically demonstrated 11 years before. Up to that time he had sold just nine reapers. In that year William Parlin started the little blacksmith shop at Canton, Ill., that was to become the first real plow factory in this country or in the world.

The first steel plow had been made by John Lane at Chicago out of an old saw blade in 1833, but the steel plow as an item of average farm equipment was still many years in the future. The chilled plow had been invented many years before, but James Oliver's first patent was not issued till 1868 and the implement was not perfected until 1873. The patenting of the first successful riding plow was still 22 years in the future—and so on down the list of the farm implements that now seem to us to have taken on a respectable antiquity.

Eighty years ago we were at the beginning of the transition from farming by hand to the period of mechanical husbandry; and then we were also at the beginning of the country's remarkable period of expansion and growth. No historian that I know of has touched more than lightly and casually upon the part that the development of efficient farm implements and their production in quantity to meet the demand played in the pioneering and settlement of the great West which was, after all, the longest step toward the fulfillment of our Republic's destiny.

In 1842 we still farmed toilsomely and scantily by hand. Then came the earlier implements that made farming more attractive and more profitable, but for nearly two full-time generations the horse furnished the only practicable power the farmer could employ

save the two hands of himself and his hired man. Now, we are well advanced in the third principal phase of the development of farm machinery—the age of power farming; and most of us are as little conscious of the great transition that is taking place in this respect as the farmers of fifty or eighty years ago were of what was then going on in our industry and in their.

When I think of what the invention and development of more modern farm implements meant to the progress of our civilization throughout the latter part of the nineteenth century, I often wonder what the wider and larger effect will be when we have reached the high point in the development and use of power machinery on the farm.

The Era of Internal Combustion Engines

Steam has so far played only a small direct part in the products of the farm implement industry or in agriculture. We had to wait for the full development of the internal combustion engine before we could improve upon the horse as a source of power on the farm. The first internal combustion tractor was offered for sale in the early 90's, but it was not until 1903 that the real development of gasoline and kerosene tractors began. It is of record that the first successful manufacturer of tractors had only 300 tractors in the field by the spring of 1908.

The tractor as a source of farm power, marking the beginning of the era of power farming, seems a familiar agency for doing the hardest of all farm work, yet we note in the last census that only 3.6 per cent of America's 6,500,000 farms were equipped with tractors. At present, according to trade estimates, there are about 400,000 tractorized farms, or 6.1 per cent. Obviously there is still a long way to go before this simplest of power plants reaches anything like general use in agriculture.

Still younger and much less familiar to the nonfarming public and, in fact, to a considerable part of our agricultural population, is the direct combination of the internal combustion principle with farm machinery. I refer to automotive agricultural machines furnishing all their own tractive and operative power. Here the room for modification, improvement and invention is wide and the field attractive. It may well be believed that within another generation we shall see changes in farm equipment along this line that will mean still lower labor costs, with corresponding benefits to all concerned.

LET US TAN YOUR HIDE.

Horse or Cow hide, Calf or other skins with hair or fur on, and make them into coats (for men and women), robes, rugs or gloves when so ordered; or we can make your hides into Oak Tanned Harness or Slaughter Sole or Belt Leather; your calfskins into Shoe Leather, colors Gun Metal, Mahogany Russet or lighter shades. Calfskins tanned in the lighter shades of shoe leather, also make elegant stand and table covers, great for birthday, wedding and holiday gifts.

LET US FIX YOUR WORN FURS

fashion, repair and reshape them if needed. Furs are very light weight, therefore it would cost but little to send them in to us by Parcel Post for our estimate of cost, then we will hold them aside awaiting your decision. Any estimate we make calls for our best work. Our illustrated catalog and style book combined gives a lot of useful information. It tells how to take off and care for hides. About our safe dyeing process on cow and horse hides, calf and fur skins. About dressing fine fur skins and making them into neckpieces, muffs and garments. About our sharp reduction in manufacturing prices. About Taxidermy and Head Mounting.

The Crosby Frisian Fur Company,
571 Lyell Ave., Rochester, N. Y.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half tea-spoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.

Wells Richardson Co., Burlington, Vt.

\$24.95 American CREAM SEPARATOR

On trial, Easy running, easily cleaned. Skims warm or cold milk. Different from picture which shows larger capacity machines. Get our plan of easy MONTHLY PAYMENTS and handsome free catalog. Whether dairy is large or small, write today. AMERICAN SEPARATOR CO. Box 7052 Bainbridge, N. Y.

SILOS

Our easy terms are all we need to talk about.

Quality Silo does its own talking. It is a thoroughbred. Agents wanted.

QUALITY MFG. CO., HAGERSTOWN, MD.

HEAVES

Is your own horse afflicted? Use 2 large cans. Cost \$2.50. Money back if not satisfactory.

ONE can at \$1.25 often sufficient. In powder form. Most for cost.

NEWTON'S

A veterinary's compound for Horses, Cattle and Hogs. Heaves, Coughs, Distemper, Indigestion, Worm expeller, Conditioner. At dealers' or by parcel post.

THE NEWTON REMEDY CO., Toledo, Ohio

FREE BOOK on CONTAGIOUS ABORTION

Describes cause, effects and treatment; tells how farmers in all parts of U. S. are stopping the ravages of this costly malady.

We Back Our Guarantee

Subscribers Reimbursed for Loss With Advertisers

SOME time ago, Mr. Wheeler Kunkle of Dallas, Pa., answered an advertisement in the American Agriculturist. The advertisement was of the Boston Mail Order Company, and at the time of its acceptance, under the old management, the firm was thought to be reliable. However, it went into bankruptcy shortly after, and several claims for the loss of different amounts came into the Service Bureau.

Although the new management of the magazine had not had any part in accepting the advertisement, we felt that the guarantee printed then, as now, should be interpreted in the strictest possible sense. We therefore sent Mr. Kunkle a check for \$2.98 to cover his loss because of the failure of the Boston Mail Order House.

We were only too glad to make good to our subscriber, the money loss he had incurred, and thought the matter ended there. However, Mr. Kunkle felt differently about it. He returned our check with the following letter: "Enclosed please find \$1.00, for which renew my subscription for American Agriculturist for one year. Also find check which you sent me for Boston Mail Order account, as I cannot expect you people to pay other people's debts. Kindly thanking you for past services."

As a matter of fact, we would have made good Mr. Kunkle's loss even if it had been for a much greater amount, but under the circumstances we were glad to extend his subscription and to assure him that the services we had rendered were simply in accordance with our policy of standing behind our advertisements.

The guarantee which we give, and which is printed on another page of the magazine, reads as follows: "The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: 'I saw your ad in the American Agriculturist when ordering from our advertisers.'"

Readers of the American Agriculturist need have no fear in taking this guarantee at its face value.

MORE "GUESS-WORK GLASSES"

"I am very grateful for the assistance you gave me. I don't believe I would have received anything if it had not been for you."

It was thus that Mrs. L. H. M. of Grand Valley, Pa., wrote us when she received a check for \$5.49 from a spectacle house in Chicago. We told Mrs. M. when she put the case in our hands that we had frequently warned our readers to have nothing to do with these houses, which pretend to be able to supply correct glasses by mail. Although they urged Mrs. M. to send another order, she was glad enough to get her money, and did not take up the suggestion that she send it back for another pair of "guess-work glasses."

LOOK OUT FOR THIS MAN!

A general warning which readers in Ohio may especially take to heart has just been issued by the International Magazine Company, which publishes Good Housekeeping. A young man of about 25 years old, who is a smooth talker and usually represents himself as a medical student, is canvassing for subscriptions to the magazine and offering a premium of six pieces of Pyrex Ware. The agent in question, who uses the names of Thompson, McGuire, Sawdon or Sandow and Stone, give an official receipt for a three-dollar subscription, and that is the last heard of him.

Sometimes this man works in collaboration with a partner, and sometimes he goes it alone. In any case, he has no authority to offer the magazine either with or without the premium. One of our readers was recently taken in by this swindler, and upon reporting

the case to the district manager of the International Magazine Company, we learn that they had sent out a poster offering a reward of \$50 for the arrest and conviction of this man.

If he canvasses your neighborhood, report immediately to your police department, and notify the agency bureau of the International Magazine Company, 119 West 40th Street, New York City.

THE CHECK CAME PROMPTLY

A check for \$29.49 closed the case of Mr. Philip Papke, Fillmore, N. Y., against a mail-order company in Minnesota. Mr. Papke had waited a reasonable time after sending his order and then wrote the company twice before receiving any return with a request for a duplicate order. His check was returned as having been paid, but the order never came, nor did he hear anything further from them. Early in January, Mr. Papke turned the case over to the Service Bureau of American Agriculturist, and the company reported that the order had been shipped, but was doubtless lost in the mail. They enclosed a check for the full amount of the order, and apologized for any inconvenience which had been caused. Both the mail-order company and Mr. Papke thanked the Service Bureau for helping straighten the matter out.

Pruning the Pear

(Continued from page 91)

branches will then form an outward position while the branches higher up will form an upward growth which after the tree reaches full size must be kept cut back in order to prevent the tree from growing too tall.

Such varieties as Winter Neles, and the Lawrence have a tendency to develop the natural form. This form of development means a selection of three or four scaffold limbs and then allowing the tree to develop as it will with little consideration of shape or form. Such trees are usually misshapen, weak at the crotches, break down early, form too compact heads, and develop much, but inferior fruit. On the other hand, if the tree has been so neglected it may be pruned, the fruit-bearing branches, to a limited degree, selected and the head opened up to light and air one may expect a fair return of fruit.

In shaping the vase form of pear tree the straight one year old shoot should be cut back to from 18 to 24 inches from the ground. After the new or secondary shoots are well formed, three main limbs should be selected and all others removed. The three limbs then forming an inverted tripod should be cut back to about 18 or 20 inches from the crotch. If dwarf trees are so developed their limbs should be cut back to about 12 inches from the crotch. Only the buds on the upper five or seven inches of these three limbs should be allowed to develop. The following spring, select two of the most vigorous sprouts from each limb and remove all the others. These should now be pruned back leaving 12 or 18 inches of growth from the point where the three limbs were last pruned. This operation is repeated until the desired head and height are formed.

Where the pear orchards are intercropped with currants or gooseberries or some other fruit or even vegetables, the plowing and general cultivation cuts off a certain percent of the root system which, if the tree has a normal growth, tends to induce the production of fruit spurs. Therefore cultivation of other crops in the pear orchard might be considered as part of the pruning practice.

If the pear tree has the bearing habit, pruning, it is true will seldom influence the tree toward bearing more fruit but will mean a larger, finer quality, more uniform size, better formed and more saleable fruit.

No good farmer would neglect to harvest his hay, but some dairymen fail to harvest ice, which is almost as necessary as hay in the production of market milk.

\$7.50 After 30 Days Free Trial

80 days' free trial—then, if satisfied, only \$7.50 and a few easy payments—AND—the wonderful Belgian Melotte Separator is YOURS.

No Money Down!

Catalog tell all—write. Catalog! U. S. Bulletin 201 shows that vibration of the bowl causes cream to separate. The Melotte bowl is self-balancing. Positively cannot get out of balance therefore cannot vibrate. Can't remix cream with milk. The Melotte has won 201 Grand and International Prizes.

Catalog FREE

Write for new Melotte catalog containing full description of this wonderful cream separator and the story of M. Jules Melotte, its inventor. Don't buy any separator until you have found out all you can about the Melotte and details of our 16-year guarantee which is infinitely stronger than any separator guarantee. Write TODAY.

The Valley of the Giants—By Peter B. Kyne

THE fight is on! Bryce Cardigan, son of the blind old pioneer of Sequoia, takes up his father's battle against the unscrupulous Colonel Seeth Pennington, a newcomer in the redwood country. In doing so, he sacrifices his friendship with Shirley Sumner, the Colonel's niece.

A visit to the rival camp to thrash Rondeau, a woods-boss who has felled a tree in the Valley of the Giants, old Cardigan's sacred grove where his wife lies buried, results in a free-for-all fight unfairly incited by the Colonel, in which Shirley aids Bryce to escape. But she swears they must always be enemies.

After a visit to his own camp to discharge the drunken McTavish, Cardigan's old woods-boss, where he meets the beautiful Moira, Bryce boards the homebound logging train.

The train runs away and Bryce manages to cut out the caboose and save the lives of Pennington and Shirley. McTavish, sobered, pleads for another chance, but is refused.

"YOU'VE been drunk for fifteen days—and I'm paying you for it, Mac." Bryce reminded him gently. "Don't leave your check behind. You'll need it."

With a fine show of contempt and rage, McTavish tore the check into strips and threw them at Bryce. "I was never a man to take charity," he roared, and left the office. Bryce called after him a cheerful good-bye, but he did not answer. For a month his whereabouts remained a mystery; then one day Moira received a letter from him informing her that he had a job knee-bolting in a shingle mill in Mendocino County.

In the interim Bryce had not been idle. From his woods-crew he picked an old, experienced hand—one Jabez Curtis—to take the place of the vanished McTavish. Colonel Pennington, having repaired in three days the gap in his railroad, wrote a letter informing Bryce that until more equipment could be delivered to take the place of the rolling stock destroyed in the wreck, the latter would have to be content with half-deliveries; whereupon Bryce irritated the Colonel profoundly by purchasing a lot of second-hand trucks from a bankrupt sugarpine mill and delivering them to the Colonel's road via the deck of a steam schooner.

"That will insure delivery of sufficient logs to get out our orders to file," Bryce informed his father. "While we are morally certain our mill will run but one year longer, I intend that it shall run full capacity for that year. In fact, I'm going to run a night-shift."

The sightless old man raised both hands. "The market won't absorb it," he protested.

"Then we'll stack it in piles to air-dry and wait until the market is brisk enough," Bryce replied.

"Our finances won't stand the overhead," his father warned.

"I know we haven't sufficient cash on hand, Dad, but—I'm going to borrow some."

"From whom? No bank in Sequoia will lend us a penny."

"Did you sound the Sequoia Bank of Commerce?"

"Certainly not. Pennington owns the controlling interest."

Bryce chuckled. "I don't care where the money comes from so long as I get it, partner. Desperate circumstances require desperate measures you know, and the day before yesterday, I drifted in on the president and casually struck him for a loan of one hundred thousand dollars."

"Bryce! What did he say?"

"Said he'd give me an answer this morning. He asked me, of course, what I wanted that much money for, and I told him I was going to run a night-shift, double my force of men in the woods, and buy some more logging-trucks. Well, this morning I called for my answer—and got it. The Sequoia Bank of Commerce will loan me up to a hundred thousand, but not in a lump sum. I can have enough to buy the logging-trucks now, and on the first of each month the bank will advance me the money to meet my pay-roll."

"Bryce, I am amazed."

"I AM not. Pennington is only playing safe—which is why the bank declined to give me the money in a lump sum. If we run a night-shift, Pennington knows that we can't dispose of our excess output under present market conditions. It's a safe bet our lumber is going to pile up on the mill dock; hence, when the smash comes and the Sequoia Bank of Commerce calls our loan and we cannot meet it, the lumber on hand will prove security for the loan, will it not? In fact, it will be worth two or three dollars per thousand more than now, because it will be air-dried. And inasmuch as all the signs point to Pennington's gobbling us anyhow, it strikes me as a rather good business on his part to give us sufficient rope to insure a thorough job of hanging."

"But what idea have you got back of such a procedure, Bryce?"

"Merely a forlorn hope, Dad. Something might turn up. The market may take a sudden spurt and go up three or four dollars."

"Yes—and it may take a sudden spurt and drop three or four dollars," his father reminded him.

Bryce laughed. "That would be Pennington's funeral, Dad. It costs us nothing to make the experiment."

John Cardigan sighed. But he advanced no objection, and the following

day the agreement was entered into with the bank. Bryce closed by wire for the extra logging-equipment and immediately set about rounding up a crew for the woods and for the night-shift in the mill.

CHAPTER XIX

FOR a month Bryce was as busy as the proverbial one-armed paper-hanger with the itch, and during all that time he did not see Shirley Sumner or hear of her, directly or indirectly. Only at frequent intervals did he think of her, for he was striving to forget, and the memory of his brief glimpse of paradise was always provocative of pain.

Moira McTavish, in the meantime, had entered upon her duties in the mill office. The change from her dull, drab life, the opportunity for companionship with people of greater mentality and refinement than she had been used to, quickly brought about a swift transition in the girl's nature. With the passing of the coarse shoes and calico dresses and the substitution of the kind of clothing all women of Moira's instinctive refinement and natural beauty long for, the girl became cheerful and animated. Old Sinclair discovered that Moira's efforts lightened his own labors in exact proportion to the knowledge of the business which she assimilated from day to day.

Moira worked in the general office, and except when Bryce desired to look at the books or Moira brought some document into the private office, there were days during which his pleasant "Good-morning, Moira," constituted the extent of their conversation. To John Cardigan, however, Moira was a ministering angel. Gradually she relieved Bryce of the care of the old man. She made a cushion for his easychair in the office; she read the papers to him, and the correspondence, and discussed with him the receipt and delivery of orders, the movements of the lumber-fleet, the comedies and tragedies of his people, which had become to him matters of the utmost importance. Whenever Bryce was absent in the woods or in San Francisco, it fell to her lot to lead the old man to and from the house on the hill. To his starved heart her sweet womanly attentions were tremendously welcome, and gradually he formed the habit of speaking of her, half tenderly, half jokingly, as "my girl."

BRYCE had been absent in San Francisco for ten days. He had planned to stay three weeks, but finding his business consummated in less time, he returned to Sequoia unexpectedly. Moira was standing at the tall bookkeeping desk, her beautiful dark head bent over the ledger, when he entered the office and set his suitcase in the corner.

"Is that you, Mr. Bryce?" she queried.

"The identical individual, Moira. How did you guess it?"

She looked up at him then, and her wonderful dark eyes lighted with a flame Bryce had not seen in them heretofore. "I knew you were coming," she replied simply.

"But how could you know? I didn't telegraph because I wanted to surprise my father, and the instant the boat touched the dock, I went overside and came directly here."

"That is quite right, Mr. Bryce. Nobody told me you were coming, but I just knew, when I heard the *Noyo* whistling as she made the dock, that you were aboard, and I didn't look up when you entered because I wanted to verify my—my suspicion."

"You had a hunch, Moira. Do you get those telepathic messages very often?" He was crossing the office to shake her hand.

"I've never noticed particularly—that is, until I came to work here. But I always know when you are returning after a considerable absence." She gave him her hand. "I'm so glad you're back."

"Why?" he demanded bluntly.

She flushed. "I—I really don't know, Mr. Bryce."

"Well, then," he persisted, "what do you think makes you glad?"

"I had been thinking how nice it would be to have you back, Mr. Bryce. When you enter the office, it's like a breeze rustling the tops of the Redwoods. And your father misses you so; he talks to me a great deal about you. Why, of course we miss you; anybody would."

As he held her hand, he glanced down at it and noted how greatly it had changed during the past few months. The skin was no longer rough and brown, and the fingers, formerly stiff and swollen from hard work, were growing more shapely. From her hand his glance roved over the girl, noting the improvements in her dress, and the way the thick, wavy black hair was piled on top of her shapely head.

"It hadn't occurred to me before, Moira," he said with a bright impersonal smile that robbed his remark of all suggestion of masculine flattery, "but it seems to me I'm unusually glad to see you, also. You've been fixing your hair different."

THE soft lambent glow leaped again into Moira's eyes. He had noticed her—particularly. "Do you like my hair done that way?" she inquired eagerly.

"I don't know whether I do or not. It's unusual—for you. You look mighty sweetly old-fashioned with it coiled in back. Is this new style the latest in Sequoia?"

"I think so, Mr. Bryce. I copied it from Colonel Pennington's niece, Miss Sumner."

"Oh," he replied briefly. "You've met her, have you? I didn't know she was in Sequoia still."

"She been away, but she came back last week. I went to the Valley of the Giants last Saturday afternoon—"

Bryce interrupted. "You didn't tell my father about the tree that was cut, did you?" he demanded sharply.

"No."

"Good girl! He mustn't know. Go on, Moira. I interrupted you."

"I met Miss Sumner up there. She was lost; she'd followed the old trail into the timber, and when the trees shut out the sun, she lost all sense of direction. She was terribly frightened and crying when I found her and brought her home."

"Well, I swan, Moira! What was she doing in our timber?"

"She told me that once, when she was a little girl, you had taken her for a ride on your pony up to your mother's grave. And it seems she had a great curiosity to see that spot again and started out without saying a word to any one. Poor dear! She was in a sad state when I found her."

"How fortunate you found her! I've met Miss Sumner three or four times. That was when she first came to Sequoia. She's a stunning girl, isn't she?"

"Perfectly, Mr. Bryce. She's the first lady I've ever met. She's different."

"No doubt! Her kind are not a prod-

uct of homely little communities like Sequoia. And for that matter, neither is her wolf of an uncle. What did Miss Sumner have to say to you, Moira?"

"She told me all about herself—and she said a lot of nice things about you, Mr. Bryce, after I told her I worked for you. And she insisted that I should walk home with her. So I did—and the butler served us with tea and toast and marmalade. Then she showed me all her wonderful things—and gave me some of them. Oh, Mr. Bryce, she's so sweet. She had her maid dress my hair in half a dozen different styles until they could decide on the right one, and—"

"And that's it—eh, Moira?"

She nodded brightly.

"I can see that you and Miss Sumner evidently hit it off just right with each other. Are you going to call on her again?"

"Oh, yes! She begged me to. She says she's lonesome."

"WELL, her choice of a pal is a tribute to the brains I suspected her of possessing. I've no doubt you find life a little lonely sometimes, too."

"Sometimes, Mr. Bryce."

"How's my father?"

"Splendid. I've taken good care of him for you."

"Moira, you're a sweetheart of a girl. I don't know how we ever managed to wiggle along without you." Fraternally—almost paternally—he gave her radiant cheek three light little pats as he strode past her to the private office. On his desk lay a pile of letters and orders, and a moment later he was deep in them, oblivious to the fact that ever and anon the girl turned upon him her brooding, Madonnalike glance.

That night Bryce and his father, repaired to the library, where the bustling Mrs. Tully served their coffee. This good soul, after the democratic fashion in vogue in many Western communities, had for a quarter of a century served father and son their meals and then seated herself at the table with them. This arrangement had but one drawback, although this did not present itself until after Bryce's return to Sequoia. For Mrs. Tully had a failing common to many of her sex: she possessed for other people's business an interest absolutely incapable of satisfaction—and she was, in addition, garrulous beyond belief. The library was the one spot in the house which John Cardigan had indicated to Mrs. Tully as sanctuary for him and his; hence, having served the coffee, the amiable creature withdrew, although not without a pang as she reflected upon the probable nature of their conversation.

No sooner had Mrs. Tully departed than Bryce rose and closed the door behind her. John Cardigan opened the conversation with a contented grunt:

"Plug the keyhole, son," he continued. "I believe you have something on your mind—and you know how Mrs. Tully resents the closing of that door. Estimable soul that she is, I have known her to eavesdrop."

BRYCE clipped a cigar and held a lighted match while his father "smoked up." Then he slipped into the easy-chair beside the old man.

"Well, John Cardigan," he began eagerly, "fate ripped a big hole in our dark cloud the other day and showed me some of the silver lining. I've been making bad medicine for Colonel Pennington."

"What's in the wind, boy?"

"We're going to parallel Pennington's logging-road."

"Inasmuch as that will cost close to three quarters of a million dollars, I'm of the opinion that we're not going to do anything of the sort."

"Perhaps. Nevertheless, if I can demonstrate to a certain party that it will not cost more than three quarters of a million, he'll loan me the money." The old man shook his head. "I don't believe it, Bryce. Who's the crazy man?"

"His name is Gregory. He's Scotch."

"Now I know he's crazy. When he hands you the money, you'll find its Confederate greenbacks."

(Continued next week)

A More Sensitive Radio Set

How to make a Regenerative or Vacuum Tube Outfit

WHEN one wishes to receive radio over distances upward of 20 miles, it becomes necessary to use a more sensitive form of detector than the crystal. A vacuum tube detector is then needed. In Figure 3 appears a single tube receiving set which for simplicity and results cannot be excelled. Moreover, should the builder of the set wish to add amplification later on or to try another "hook-up," the parts are all necessary and easily adapted.

What can be expected from such an outfit in the way of distance? So much depends upon the height of the aerial and the location that no definite statement can be made. It is safe to expect clear daylight reception of 30 or 40 miles, and distances at night of at least 200 miles.

However, practically every one using such a set often hears stations over 1,000 miles away, and those in country locations report even better results. The farmer has far the best of radio in his location, for at least a score of miles from the nearest broadcaster, he can pick and choose at will among the dozens of programs sent out every evening.

The parts needed for the set are as follows:

.001 mfd. variable condenser; variometer; tube socket; rheostat; grid condenser with grid leak; phone condenser; 8 binding posts; hard rubber or bakelite panel, 6 x 12 inches; wooden base; vacuum tube; telephone headset, at least 2000 ohms; "A" battery; "B" battery; 100 feet No. 14 aerial wire; ground clamp; ½ lb. bell wire for connections; 2 antenna insulators; 1 porcelain lead-in bushing; 2—3 inch dials.

It is advisable to pay a fairly good price for everything purchased, to insure good results. There should be no

By BRAINARD FOOTE

RD FOOTE a common dry battery, such as the Red Seal, is the "A" battery. The "B" battery should then be 45 volts. Results will be as good as with the other tube, but there is this to be said: Should it be desired to add an amplifier later on, results will not be quite as good with the WD-11 tubes, as far as the amplifier is concerned, although they may be used with considerable success. Fig. 4 is a rear view, indicat-

ing the approximate placing of the parts on the panel. The variometer may not be wired exactly as shown, but it should be altered so there are two distinct parts: the two fixed coils connected together, and the rotary member. The flexible leads coming out from the hollow shaft are the connections to the

rotor, while the other two are for the fixed coils, or stator. Bell wire is suitable for joining the parts and all joints should be tight. If possible, they should be soldered. The binding posts are all marked: "T" for telephones; "B" for the "B" battery, of which the red wire is positive and connects to the phones; "A" for "A" battery, with "positive" connected to the variometer and "ground"; "A" for aerial and "G" for ground. The appearance of the set from the front is given in Figure 3.

Operating the Set

The working of the set is simplicity itself. First the tube is inserted in the socket, and the rheostat turned on sufficiently to illuminate the tube and produce in the phones a bell-like ringing sound when the tube is tapped lightly with the finger. Care should be taken never to interchange the "A" and "B" batteries, for fear of burning out the vacuum tube. The rotor

Layout for Regenerative or Vacuum Tube Outfit

chance of leakage due to poor sockets, poorly insulated condensers and the like. Hence it is well to insist upon products stamped with the manufacturer's name. Everything required may be ordered from a mail-order catalog, if a radio dealer is not available. American Agriculturist will advise you where parts may be procured.

If the standard, vacuum tube is selected, such as the UV 200, the socket will have terminals arranged in a different manner from that illustrated, but the connections should be made to posts lettered as shown in the sketch. In that case, the "A" battery is a 6 volt storage battery, and the "B" battery is a 22½ volt block battery. There is on the market a tube called the WD-11, which is operated on 1½ volts, the type of socket shown is for this tube. Much less current is needed, and

of the variometer, which in this set is the "tickler," should be set at right angles to the stator, as shown in Figure 4. The variable condenser is then turned slowly from a zero position with the plates all out, to the 100 degree point, where the plates are all meshed. Throughout the process of moving the condenser, the tickler should be moved along with it, keeping the two instruments in such a relative position that "oscillations" are just on the point of starting. This is indicated by a soft rushing sound as of water, and is the point of regeneration. Transmission from a broadcasting station is indicated by a whistling sound which "chirps" like a canary as the wave length is passed on the condenser. This should be brought in as loudly as possible, and the tickler turned back to

(Continued on page 106)

WE OFFER
\$1,000.00

for accidental death or injury in a travel accident under the conditions mentioned in the lower left hand column below.

Tragic auto accidents and train wrecks occur so frequently that you never know but what your turn is next. In justice to your family you should carry some Travel Accident Insurance.

We have secured for our readers a policy that costs so little as to be within the reach of every one.

A \$1,000.00 Policy For Only 50 Cents

Provided you send your three-year subscription for AMERICAN AGRICULTURIST *at the same time*. In other words, you get a \$1,000.00 Travel Accident Policy for one year and a three-year subscription for AMERICAN AGRICULTURIST, both for only \$2.50.

This Tells You What the Policy Will Pay

The following shows the Protection given to A. A. Readers by the North American Accident Insurance Co. of Chicago. Read, then Cut the Coupon and Mail It.

This Company will pay the following amounts, subject to the terms of the policy, for death or disability on a public carrier, due to its wrecking or disablement while the insured is riding as a fare-paying passenger, or due to the wrecking or disablement of any private horse-drawn or motor-driven vehicle on which insured may be riding or driving, or by being thrown there from.

Life	One Thousand Dollars	(\$1,000.00)
Both Hands	One Thousand Dollars	(\$1,000.00)
Both Feet	One Thousand Dollars	(\$1,000.00)
Sight of Both Eyes	One Thousand Dollars	(\$1,000.00)
One Hand and One Foot.	One Thousand Dollars	(\$1,000.00)
Either Hand and Sight of One Eye.	One Thousand Dollars	(\$1,000.00)
Either Foot and Sight of One Eye.	One Thousand Dollars	(\$1,000.00)
Either Hand	Five Hundred Dollars	(\$500.00)
Either Foot	Five Hundred Dollars	(\$500.00)
Sight of Either Eye	Five Hundred Dollars	(\$500.00)
Total Disability, 13 weeks or less,	Ten Dollars	(\$10.00) per week

Life, by being struck, knocked down or run over by vehicle, while standing or walking on public highway
Two Hundred and Fifty Dollars (\$250.00)

The above indemnities will be paid, subject to the provisions and conditions of the policy. A complete numbered and registered policy will be supplied each person insured. Be sure to read it before filing away.

This Travel and Pedestrian Accident Insurance will protect every registered subscriber of American Agriculturist who pays a 50 cent fee at the same time he pays \$2.00 for a three-year subscription for American Agriculturist.

It will come in mighty handy for your family to receive \$1,000.00 in case you are killed or crippled under the conditions mentioned below. And to think that you can get this protection for only 50c extra added to your three-year subscription for AMERICAN AGRICULTURIST. Surely there is no reader of this paper that can afford to miss this unusual opportunity. If your subscription does not expire yet, accept this offer just the same and have your subscription extended three years from present expiration date.

Don't trust to luck. Play safe.

For the Valentine Party

Games and Decorations That are Suitable

JUST why that rigorous old Roman, Valentinus, of whom nothing is known except that he suffered martyrdom on February 14, of the year 270, should have been chosen as the patron saint of lovers, is shrouded in mystery. Scholars say, however, that it is all because the ancient Roman festival of the Lupercalia, in honor of Pan and Spring, fell on February 15. The early Christian fathers, whose policy it was to adopt all the popular pagan holidays, therefore arbitrarily assigned to Valentine this festival, when the girls of ancient Rome put their names in a box from which they were drawn by the young men.

Whatever the origin, the day is one replete with sentiment, symbolized by hearts and cupids and mating doves, and it is a favorite occasion for parties and entertainments.

Decorating the house for a Valentine party is almost as much fun as getting it ready for Christmas. Red is the conventional color, and any ordinary room may be made festive by the use of festoons of red crepe paper, hearts of all sizes dangling from red ribbons, and cupids and red tissue paper roses. Now that there are on the market luncheon sets, napkins, place cards, invitations and festoons, all of crepe paper and bearing special Valentine's Day designs, it is very easy to decorate a home or schoolroom. A luncheon set, consisting of a table cover, 61 by 84 inches, one dozen napkins and one dozen paper plates, all emblazoned with red hearts and other symbols, cost but eighty cents. One can also obtain red hearts of varying sizes, in packages of twenty-five for ten cents, as well as gummed seals with appropriate Valentine designs.

With plenty of red crepe paper and red cardboard, however, one can dispense with these other aids. Large red hearts may be placed in a border around the table, for instance, and festoons of narrow strips of the red crepe paper hung from the chandelier to the corners of the room. Red ribbons of different lengths, each ending in a small red heart, may hang from the chandelier. The table centerpiece may consist of a bunch of red paper roses surmounted by a Kewpie doll disguised as Cupid. From his quiver of arrows narrow red ribbon go out to each place where a very small red-sashed Kewpie is attached to a red-covered paper serving cup.

Invitations for a party on February 14 may be written on inexpensive valentine postcards. To assign partners after the guests arrive, a number of valentines should be cut in two, one part of them going into one box from which the girls are to choose, the other into one from which the men draw. Each guest must then "match" up the other half of his valentine.

Games appropriate to the Valentine's Day party are:

Lovers' Tournament

The girls, each holding a cracker, line up on one side of the room, the boys on the other. At a given signal the knights run to their ladies, each receives from her a cracker and returns to the starting point and eats the cracker as quickly as possible, then returns to his lady, kneels before her and whistles a tune which the girl must recognize and name. The first girl to identify her knight's tune gets the prize.

What Hearts Answer These?

To quiet down after the tournament, which is apt to prove rather uproarious, the following is suggested as a guessing game:

1. A simple and lovely flower? Heartsease.
2. A novel by the "Wizard of the North"? Heart of the Midlothian.
3. A heart poem from the pen of Wordsworth? Heart-Leap Well.
4. The heart of a famous canine movie actor? Strongheart.
5. One of the things in which Washington was first? Hearts of his countrymen.
6. The heart of an author who wrote Western tales? Bret Harte.

7. The Heart of one of the New England States? Hartford, Conn.

8. The heart of a great English king who seldom visited his kingdom? Richard Lionhearted.

9. A signer of the Declaration of Independence? John Hart.

10. A proverb about hearts for lovers? "Faint heart ne'er won fair lady."

Heart Quoits

Fasten a stick about the height of a walking stick to a wooden base, and make a dozen heart-shaped quoits of wire covered with red cloth or crepe paper. A prize is given to the guest who tosses the most quoits over the stick from a given place in the room.

Heart Pass

Players form in two lines facing each other. Place a dish of candy hearts beside each leader and an empty dish at the end of each line. Everyone in line clasps the right wrist of the player on his left with his left hand. At a given signal the leaders pick up one heart at a time and passes it down the line. If a heart is dropped it must be picked up with all the hands still clasped. The side which first passes all its hearts from one dish to the other gets all the hearts, including those passed by the opposing side.

A simple menu for a Valentine's Day luncheon follows:

Creamed Chicken and Mushrooms, or Peas in Heart-shaped Pastry Cases
Waldorf Salad Hot Rolls
Cocoa with Whipped Cream
Ice-cream Hearts Valentine Cakes
Sugar-coated Almonds

Brick ice cream sliced and cut out with a tin cookie cutter may be used. For the cakes, a plain white cake about an inch in thickness cut out in heart shapes after it is baked and iced with fancy pink and white icings, is suitable.

Parties for children, or where simpler refreshments are required, may be amply served with heart-shaped sandwiches of various kinds, such as chicken, tongue, cream cheese and nuts, with heart-shaped cookies and ice cream or hot chocolate.

Heart-shaped boxes or heart-shaped bags of red cloth, filled with candies, may be used for prizes or favors.

PRETTY SKATING SET

A knitted set, for skating or tobogganing, should be brightly colored and becoming as well as warm and snug. The set shown here was made in black

and crimson. It would be equally pretty in turquoise blue with black; in green and heather brown, or in white, with any color.

Full directions for making both Tam o' Shanter and scarf will be sent for 12c in stamps. Mention E 7 in ordering.

NEW LAMP BURNS

94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, R. M. Johnson, 642 N. Broad St., Philadelphia, Pa., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make \$250 to \$500 per month.

New Lamp Invention Beats Electricity

Beautiful Lamp Gives 400 Candle Power For Less Than 1/2 Cent A Night

Any home may now have the benefits of electric lights at practically no cost through the remarkable invention of B. J. Davis, a Kansas City expert mechanic.

This amazing invention, called the Economy Lamp, is beautifully designed and an ornament to any home. There is no wick, chimney or odor. It lights instantly and gives more light than 20 electric light bulbs, 27 lamps or 400 candles at a cost of less than 1/2 cent a night. It is so simple, a child can operate it with perfect safety and carry it anywhere.

So proud is Mr. Davis of his invention that he wants to send an Economy Lamp free to try, to any reader of American Agriculturist who will write for it. If you want plenty of soft, brilliant, healthful light you should accept this generous offer without obligation by simply sending your name and address to B. J. Davis, 528 Economy Bldg., Kansas City, Mo., before this special introductory offer is withdrawn.

Styles for Sewing Days

The Newest Patterns—How About Arbuckle?

SPRING is in the air, even if winter still keeps us snow-bound. Thoughtful women are planning now for their spring wardrobes and those who sew at home can have more clothes than those who buy readymade, for the cost of materials is usually about half that of the finished garment.

A dress for mother is shown in 1645 and a ducky little coat for daughter in 1650.

The dress has a narrow collar, a side-front closing and slightly flared

sleeves which give it extremely graceful lines. It is a dress that is very becoming to the woman of ample proportions too, for the clever use of a strip of material as a drapery at the side front tends to carry the eye downward and gives an appearance of slimmness.

No. 1645 cuts in sizes 34, 36, 38, 40, 42, 44 and 46 inches bust measure. In the 36-inch size this style requires 3 1/2 yards 40-inch material with 1 1/2 yards 32-inch contrasting. Price, 12 cents.

Shawl collars and surplice closings are considered quite the smartest thing in the new coats for junior girls. The

one-piece sleeves of this model are finished with turn-back cuffs. It would be pretty in a soft light woolen or in a shepherd's check. Big fancy buttons and clasps are very smart this year.

No. 1650 cuts in sizes 6, 8, 10, 12 and 14 years. And to make it in an 8-year size requires only 1 1/4 yards 54-inch material. Price, 12 cents, stamps or coin.

To Order: Write your name and address plainly, enclose 12 cents in stamps for each pattern ordered; send your order to Fashion Department.

Our Spring Book of Fashions, containing all the new models for the coming season, is ready. It contains pattern styles for the whole family and money can be saved by referring to it in selecting the spring wardrobe. In addition to over 300 styles, there are pages of embroidery designs, styles worn by

movie stars, and dressmaking lessons to help the beginner. The price is ten cents a copy. Address your order to Fashion Department, American Agriculturist, 461 Fourth Avenue, New York City.

FOR DAYLIGHT REST

How long you lie down does not count for as much as how well you relax. Darkness aids relaxation; that's why the night was made for sleep.

Near midday, even lowering all the shades often does not make the room dark enough. However, try laying a blue or green scarf, or any piece of

SHALL ARBUCKLE COME BACK?

WILL HAYS says yes; a great majority—we believe—of the American people says no. No, that is, to a return of the Arbuckle films to our theatres.

For "coming back" may be interpreted several ways. No one wishes to deny an honest penitent a chance to prove his regret and reform. It is said that Arbuckle, a leader in the orgy of drinking and vice during which a girl died, has been shocked to his senses, that he is a changed man.

That is good news. There are many ways in which the change, the reform, can be demonstrated. But the sure way to make it doubted is to release the Arbuckle films and to engage the comedian to make more.

To present him on the screen again is to reopen the Rappe murder case, to bring up its sensational features, the salacious undercurrent of rumor and testimony, the hints and innuendo of the street. Arbuckle on the screen, penitent though he may be, is the instant cause of offense, because he cannot rid himself of this association. And, in all too many cases, his "white-washing" will only serve as an excuse to revive and use as dubious advertising the very nastiness we are anxious to forget. Neither he nor any man in the moving-picture business can be ignorant of this eagerness among many exhibitors to make capital of that San Francisco hotel orgy.

Arbuckle should have a chance to come back—but not to the screen. There are plenty of good hard jobs, inconspicuous ones, but none the less welcome to the genuine penitent. The world's work must be done, and any who are honestly willing to play a man's part in it can find plenty of opportunities to make their work count. One would hardly welcome an absconding bank president seven months out of jail, back to the presidency because he admits that he is sorry he got caught; but the man who is honestly sorry he committed a misdeed or crime does not want to start again at his old height. He proves his change of heart as much by his actions as his protestations and "comes back" via the long and perhaps hard road of beginning all over again. Until Arbuckle reads the signboard on that road and buckles down to following it, all talk of "denying him a chance to make good" is wasted breath.

soft, dark material over the eyes. Its soothing touch is like gentle hands pressing home the message: Relax, rest.

You will find that this simple device often brings sleep to one who before could not sleep in daytime. If you are afraid of oversleeping and have no one to call you, set the alarm clock at the time you should arise, then drop off in peace. Mother's forty winks nap means poise, serenity, a longer life and a happier one for her and all around her.—MARY S. STOVER.

Reviewing the Latest Eastern Markets

POTATOES SELLING MORE FREELY

POTATOES sold more freely last week at slightly higher prices. State round whites, No. 1, sold in yards, bulk, per 180 lbs., mostly at \$2.50. Farmers have not been hauling, due to bad weather. General price, 50c a bushel. "Long Islands" South Side have touched 95c a bu.; some very fancy, \$1. The general price is 80c. The Maine shippers have been troubled with car shortage. Cabbage supplies continue light, Danish variety, white, selling at \$30 per ton, with probability of higher prices until Florida new cabbage becomes more plentiful.

APPLES SHOW LITTLE CHANGE

Apple receipts were not heavy last week at New York, but prices showed little change. Demand very light for small-sized fruit and of poor to ordinary quality. Quotations, January 25, follow, per bbl., A grade:

VARIETY	Best	Fancy	Ordinary
Greenings	\$4.25@4.50	\$4.75	\$3.75@4
Baldwin	4.25@4.50	4.75@5	4
King	4 @4.25	4.50@4.75	3.50@3.75
McIntosh	7.50@8	8.25@8.50	6.50@7

EGG MARKET SLIGHTLY BETTER

Egg prices recovered slightly and held fairly steady last week. Supplies of nearby eggs were cleaned up better than for some time past. The market for all fancy quality nearby eggs of uniformly good size and chalk-white color, is steady at time of writing. Mixed sizes, cream color, and under-grades have to be sold at relatively low prices.

What the market will do in the immediate future is very uncertain. The number of cases of eggs moved in the four largest national markets so far

this January has been somewhat less than last year, but considerably more than in 1921. The receipts at New York, however, have been greater. Buyers tend to turn from storage to fresh eggs now and cold storage stocks are not moving as rapidly as they were two weeks ago. The consumption of eggs or at least the wholesale trade output, dropped off in the week ending January 20, and was lower than during the same time last year. Easter and the Jewish Passover come at the 1st of April this year, which will cause an extra demand for March receipts.

POULTRY SHIPMENTS HEAVY

Dressed poultry supplies are in excess of the demand. Quality of New York State shipments generally poor. Express shipments of live poultry from nearby have been very light, but met a slow market, fairly well supplied with

WIRE FROM THE CONSIGNEE AS TO MARKET SITUATION.

Strictly prime live veal calves brought \$16.50 per cwt., January 25; other grades ranged from \$16 downward. The market is active and steady. Country dressed calves were in heavy supply and demand slow, with market weaker. Country dressed pigs were not so plentiful but demand was slow.

FEEDS GENERALLY HIGHER

Although oil meal dropped \$2.50 on the ton last week, the majority of other feeds showed slight advances. Gluten feed, standard spring bran, hard winter bran, standard spring middlings, choice flour middlings and yellow corn were all higher on January 24 than a week previous. Cottonseed meal continued at the same price, in spite of announcement from Washington that last ginning reports show a smaller cotton

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on January 26:

	New York	Buffalo	Phila.
Eggs, Nearbys (cents per dozen)

Hogs, Yorkers	9 1/2 @ 9 3/4	9 1/4	

freight shipments. Pigeons have been scarce, and, owing to good demand, prices have climbed up rapidly.

BUTTER PRICES LOWER

Liberal receipts of fresh butter, especially importations, and a limited demand for consumption, keep the market weak. Prices are lower than a week previous by 2 1/2c per lb. on creamery. Creamery, salted, high score, dropped to 50 to 50 1/2c lb. on January 25. Danish, Argentine and New Zealand butter are offered in considerable quantities. Shipments are increasing from New York State localities that have until recently been shipping only milk.

HAY MARKET OVERSUPPLIED

The New York market is overstocked with hay. In the middle of last week there were estimated to be about 1,200 carloads on hand sold and unsold. Mixed hay was not in demand. Shippers should remember that demand here is only for horse feeding hay.

Rye straw is in demand and market steady at \$24 @ \$25 for No. 1.

The Erie R. R. has announced that after January 26 it will allow no free lighterage on hay shipments to New York. This means that shipments cannot be reloaded and taken to another terminal point after they have once been delivered and sold, without payment of extra fees.

LAMBS BRING GOOD PRICES

Prime State lambs were in light supply last week and brought good prices. On January 25 live State lambs at 60th Street Live Stock Market, Manhattan, brought \$15 to \$16 cwt. For several days previous they were quoted at around \$16. These prices are higher than at this time last year, and will likely draw many shipments. BEFORE SHIPPING IT WOULD BE ADVISABLE TO GET ADVICE BY

crop than originally estimated. Prices on mixed dairy feeds with high protein content were generally advanced in the last ten days. Quotations at Buffalo, carlots f. o. b. in 100 lb. sacks January 24 were:

Gluten feed, \$46.55 @ 47; Cottonseed meal, 36 per cent, \$48 @ 48.50; Cottonseed meal, 43 per cent, \$54.25 @ 54.75; oil meal, 33 per cent to 34 per cent, local billed, \$52 @ 52.50; dried brewers' grains (nominal), \$49 @ 50; standard spring bran, \$33 @ 33.25; hard winter bran, \$33.75 @ 34; standard spring middlings, \$33.75 @ 34; choice flour middlings, \$33.75 @ 36.25; white hominy, \$35.80 @ 36.30.

CASH GRAINS DECLINE

At New York and Chicago, cash grain quotations practically all declined last week, as a result of depression in the future market due to lack of export demand. Prices on January 26 follow:

At New York:
No. 2 red wheat, \$1.30 1/2 bushel; No. 2 hard winter, \$1.29 1/2; No. 2 yellow corn, 89 1/4c; No. 2 mixed corn, 88 3/4c; No. 2 white oats, 55 1/2c; No. 3 white oats, 54c; rye for export, \$1.25; barley malting, 77 @ 79c; buckwheat, \$1.93 @ 2.20. At Chicago—No. 2 yellow corn, 71 1/2 @ 72c; No. 2 white oats, 44 @ 45c; barley, 60 @ 65c; rye, 87c.

A More Sensitive Radio Set

(Continued from page 103)

stop the whistle. Voice and music will then be heard clearly.

The hands will have considerable effect on the tuning of a weak station, so that it is sometimes necessary to "tune too much," as amateurs term it, and then remove the hands from the dials, when the adjustment will settle into the proper position. This can be done with a little practice. The American Agriculturist would be pleased to hear from readers who construct this set, as it is expected that some unusually good distance records will be "hung up" by those in the future.

Iron Pipe Bargains!

5C PER FOOT

Lot PH20—Wonderful values in our big stocks. Random lengths complete with couplings, all sizes at big savings, 1 in. pipe, per foot.....5c
All other sizes priced proportionately low.

Bigger opportunities and better values than ever before will be found in our gigantic stocks. This colossal sale greatly outdistances all of our sensational sales of the past.

No matter where you reside the combined price smashing power of the wonderful bargains at our numerous great U. S. Government Army camp operations and at our headquarters plant here at Chicago offer irresistible values. Mail the coupon now.

Lumber \$15 to \$25 Per Thousand!

Millions of feet of splendid lumber is now on sale at our various U. S. Government Army Camp operations. Good sound lumber, thoroughly seasoned, with nails pulled out—not clipped off. All kinds—send your list for low quick sale prices or mark coupon for our catalog of army camp material located nearest to you. Combine your requirements with your neighbors in order to secure the benefit of lowest car load freight rates.

Timbers	Sheathing	Doors	Novelty Siding	Plumbing
Joists	Drop Siding	Shiplap	Ceiling	Heating
Studding	Flooring	Windows	Planking	Pipe and Fittings

At our various government army camps we have for sale various kinds of sash, windows and frames suitable for practically every building purpose.

Sash priced from.....75c to \$1.50

Windows priced from..\$1.50 to \$3.50

Thousands of doors in regular sizes are offered for sale at the various camps at big savings. Sizes range from 2 ft. x 6 ft. to 3 ft. x 7 ft., most of them being medium size 2 ft. 8 in. x 6 ft. 8 in.

Priced from.....\$1.25 to \$3.75

5 CENTS A WEEK

He Was Born, Sonny, 114 Years Ago

8 Layers
Extra heavy flange sole

THE SOLE—A thick single-layer of the finest, toughest high-grade rubber. Its flange shape means extra protection and wear.

BACK OF THE HEEL—Eleven layers of heavy duck and highest grade rubber make this one of the strongest points of the whole boot.

11 Layers

8 Layers

THE INSTEP—A series of graduated reinforcing layers in the instep combines unusual flexibility with surprising strength.

THE ANKLE—Here the "U. S." Boot has an extra "collar" that runs all the way round the leg, and on top of that is vulcanized a heavy side-stay.

7 Layers

In the 4 places where the strain is hardest "U.S." reinforcements insure extra wear

Unless a boot is skillfully made, it will break at one of four vital points and let the water through long before it should—

It will give away at the heel—or break at the instep—or sag at the ankle or wear through at the sole—

It's at one of these four places that the strain on a boot is hardest.

That's why the makers of "U. S." Boots have built a strong system of protection into these points of hardest wear.

From 7 to 11 extra layers of fabric and tough rubber reinforce every pair of U. S. Boots at the very places that are generally the "weak spots."

The diagrams above show you just *how* U. S. Boots are built. Their construction is the result of 75 years of experience in boot making. Light enough for solid comfort—yet strong enough for the hardest tests you can give them—it *takes* years of experience to make a boot like that.

Other "U. S." Footwear—all built to give the utmost service

You'll find every type of rubber footwear in the big U. S. line. There's the U. S. Walrus, the famous all-rubber overshoe—the U. S. lace Bootee, a rubber workshoe for spring and fall—U. S. Arctics and Rubbers—all styles and sizes for the whole family. Look for the "U. S." trademark whenever you buy—the honor mark of the largest and oldest rubber organization in the world.

Looking Ahead With the Poultryman

The Egg Market and the Bearing It Has on Future Plans

THE American Hen, Incorporated, whose 6,500,000 plants, scattered all over Uncle Sam's big farmstead, employ an average of possibly 50 workers each, is prepared for a record output in 1923. The urban hen and her suburban and small-town cousins whose numbers have never been counted will make a notable mate for the remaining period based on past records, the total supply for the year applies to similar plans on the part of the automobile makers, the building trades and other of our national enterprises.

Observe the activity around the incubator factories, listen to the stories of their sales, count the mammoth hatcheries going into place, find out what poultry feed manufacturers have been doing, and all will point in the same direction. The poultry industry is still in the expansion stage.

Receipts at the four leading markets, Chicago, New York, Boston and Philadelphia do not furnish an absolute index of production, but they are the best barometer we have. The egg year begins March 1. The 1922-23 year still has several weeks to go, but after making a conservative estimate for the remaining period based on past records, the total supply for the year promises to be in the neighborhood of 15,275,000 cases. How this compares with receipts in preceding years is shown in the table below. The accompanying chart presents the same figures in graphical form:

Egg Year	Receipts
1922-1923	15,275,000 cases
1921-1922	14,267,205 "
1920-1921	12,802,454 "
1919-1920	13,896,812 "
1918-1919	12,597,519 "

The increase in the last year over 1921-1922 is about seven per cent. Both years show good-sized increases over 1919-1920 which formerly held the record.

Meat Another Product

But the poultry industry produces meat also. Indeed, it is probable that the American public eats more chicken than it does lamb and mutton. Market receipts of poultry are still more fallible than in the case of eggs as a measure of production. But in view of the other evidence there is some significance in the fact that receipts of dressed poultry at the four leading markets in the last three calendar years were as follows:

1922	277,756,466 lbs.
1921	252,356,721 "
1920	214,112,354 "

The expansion in the industry this time means a little more than normal growth paralleling the gradual increase in the hu-

man population. Poultry has been a side issue on the average farm, but good prices compared with feed costs and a steady income when times were bitterly hard on the farm have made egg money useful in meeting taxes, interest on the mortgage and notes at the bank as well as in defraying the well-known grocery bill.

There are signs that the rate of expansion is declining. For example, receipts at the

the fall and winter, but before the next storing season starts, these reserves must be distributed no matter what the price. Much the same thing is true of poultry so far as market supply goes. In the course of the year there may be some disparity in the changes in rate of production and consumption, but not for the year as a whole. For example, more eggs accumulated in storage last summer than ever before by about 25 per cent. Yet prices were kept low enough during the fall and winter to practically "clean up the lay" by the first of February.

Demand Has Been on the Increase

Aside from these mechanics of the market there has been an undoubted increase in the keenness of the demand, in the willingness of the consumer to buy. The change in volume of employment, the high income of the working man and the fact that poultry and egg prices have receded much more from war time levels than wages have done, are at the bottom of the matter.

What are the chances that demand will become keener in 1923 and thus absorb larger

receipts of poultry and eggs at prices as high as or higher than in 1922? What is the outlook for dividends? So far as can be seen they appear fairly good. The closest students of business trends believe that business activity and employment will remain high or even expand further through most of the year. Increases in wages in many industries are on the horizon. Commodity prices generally are expected to advance during the year. These expectations may not be fulfilled, but they are as well based as predictions of the future can be.

From 700,000 to 1,300,000 cases of eggs are exported annually. Fortunately, Great Britain is the chief buyer and conditions in that country are fairly stable so that if Central Europe does crack it will not greatly concern the egg market. Although imports of fresh eggs are light, from 8,000,000 to 18,000,000 pounds of dried and frozen eggs and egg albumen have been brought in annually in recent years. With the present tariff such competition, which never was severe, has been reduced. Exports and imports of poultry are negligible as a market factor.

With the situation as outlined in the foregoing, is it either over-optimism or over-conservatism to look for egg prices in 1923 on about the same level as in 1922? The fact that eggs for April delivery are being traded in at Chicago at 24 cents, or about the same as a year ago, is significant as to the sentiment of egg dealers and distributors. The usual seasonal changes are to be ex-

(Continued on page 115)

EGG RECEIPTS AT FOUR MARKETS

Receipts at Chicago, New York, Philadelphia, and Boston are not an absolute index of production, but they are the best barometer we have

four markets in the last egg year were only 7 per cent more than in the preceding year, while that year in turn gained 11.5 per cent over two years ago. Receipts in each of the last six months have been smaller than in the corresponding month in the preceding year, although the presence of large cold storage stocks at those points built up early in 1922 may have retarded the flow of additional shipments. Furthermore, prices in 1922 were less attractive than in 1921 and did not exert such a stimulating effect.

Comparing Prices

Farm prices for eggs on the first day of each of the last nine months of 1922 averaged only 26.7 cents compared with 29.8 cents on the same days in the preceding year. Farm prices for chickens averaged 19.2 cents a pound on those days against 20.6 cents a year previous. On the other hand, feed costs have averaged slightly higher than in the preceding year. Better prices for grains, cattle, hogs, sheep and dairy products are stimulating a return to these so-called major products, leaving poultry again as a side line. In spite of this check, however, the momentum which the industry has is so great that there is every reason to expect total production of eggs and poultry in 1923 to surpass all former records.

So much for the production side. Consumption has expanded as much as production and is setting new high records. It must, inevitably. The eggs produced in the spring and summer can be stored for use in

Help the Voigt Bill

FOR over two years farmers and those interested in public health have been working hard to secure the passage of the Voigt Bill. This bill prohibits the manufacture and sale of filled milk—that is, milk from which the butter fat has been removed and coconut oil substituted—in interstate and foreign commerce.

The Voigt Bill was passed by a large majority in the House of Representatives, and was recently reported favorably by the Senate Committee on Agriculture. It will surely pass if it can be brought up before Congress adjourns. But there is less than five weeks of this Congress, and unless it can be brought up before the Senate, the bill will fail and all the tremendous amount of effort made for it will be lost. Its passage means millions of dollars every year to the dairy industry and much that cannot be measured in dollars to the public health.

As soon as you read this editorial, will you not sit down and write or telegraph both of the Senators in your State, and to any others that you know of outside of your State, urging them as emphatically as you can to help bring the Voigt Bill before this Congress? This is a definite job that you can do in the marketing of your own products that will be of more value to you than several days work on the production part of your business.

Our Market Service

IN answer to our recent offer to assist farmers with their marketing problems, we have had a large number of interesting letters and have done our best to help these correspondents to better markets. Some of the letters, together with our answers, are of enough general interest so that we publish

them in another part of this issue. If you have marketing problems, and most of you do, let us know about them and we may be able to give you some help. Of course we cannot do the impossible, but one of the things that most farmers need in market service is information, and we are in position to give this in accurate and unbiased form.

Unfortunately, the business of marketing farm products is a technical and difficult trade in itself, and a business in which information may be right to-day and wrong to-morrow because of constantly changing conditions. Therefore, the farmer who has not the time, or will not make the effort to put himself in touch with information regarding the markets, and to constantly study this changing information, will not get very far in doing his own marketing. Local dealers who make a business of buying farm products have made a lifelong study of the trade, and many of them do not make much money at it. But there is opportunity for better prices for the farmer who produces high-quality eggs, veal, hay, or other products, learns how to pack the product in the way that the market wants it, and then puts it on the market at the right time and under the right circumstances.

The Farm Doctors

UNCLE SAM FARMER was sick. His wife thought he was dangerously ill. He felt so himself, but he did not say so because he remembered, back in '73 and that other time in the early '90's, when he was sick and his wife had insisted on calling the doctors, with the result that they had nearly finished him.

But the secret of his illness was too important to keep, for most folks have come to know that when Uncle Sam Farmer stops working, the rest of the world will soon stop eating. So the doctors and the councilors came hurrying to Sam's bedside uninvited, and with ominous and important head-shakings, spent much time "investigating" and "surveying" poor Sam. Now, Sam was a quiet, retiring sort of fellow and much preferred minding his own business and having other folks mind theirs, particularly so when he remembered that he had been too tired last Saturday night to follow Mrs. Sam's emphatic advice about getting the old wash-tub out for a bath. Besides, as aforesaid, he mistrusted doctors and their fool remedies, anyway.

But after a while the doctors withdrew for a "conference." Said Dr. Allopath: "I know what ails this farmer fellow. He needs a good dose of 'farm credit.' Lots of credit will buck him up so that he will produce more food and we can buy it cheap again." "You are wrong, as usual, doctor," replied Dr. Homeopath. "Our patient is still suffering from an overdose of 'credit'; in fact, it is one of the things that made him sick. What he really needs is an injection of 'immigration germs,' which will enable him to get cheap labor from Europe. Then, with lots of labor, he will produce more food than we need and we can buy it cheap." "I am with you on buying our food cheap," said Dr. Autosuggestion, "but your remedies are ridiculous. All that has put that fellow on his back is poor management, and all that he needs is 'good advice.'"

Finally, after much further discussing and conferring, the doctors, after much disagreement among themselves, appealed to Dr. Sawbones, the surgeon, who had up to then maintained a sad and dignified silence. "I cannot at present add any light to your discussion, gentlemen," said Dr. Sawbones. "I came over here expecting and hoping to remove Sam Farmer's 'spondulix,' but after a careful 'investigation' I find that some one has beaten me to it, and now my only hope is to wait until it grows again." Unable to

agree, the doctors each left a separate set of remedies for the patient and departed after assuring Sam that they would return soon and bring more advisers. As soon as they had gone, Sam painfully arose from his bed, and, gathering the many bottles in his arms, threw them all out of the window.

Next day old neighbor "common sense" came in for a visit, and Sam told him about the doctors. "Ain't it funny," said the neighbor, "that them fellers don't know that the best kind of medicine for you is a little letting alone. All you need is a chance to co-operate with me and your other farmer neighbors to solve your own problems. Then you won't be so liable to get sick again like you are now with an overdose of high taxes, hard work, and no spondulix."

The League is Legal!

WILL the Dairymen's League Cooperative Association's contract with its members stand the test of the courts? A Supreme Court jury says "Yes." The League sued two farmers of Chenango County on January 26 for breaking their contract, and won a judgment of \$228.16. Before rendering its verdict, the jury first made sure that the contract was just as binding on the League as it was on the member.

This victory of the Cooperative Association, together with the one against Fred C. Barnes, who sued the League for restraint of trade, have done much toward strengthening the Association and convincing farmers that it is operating along right lines and making a real effort to get fair prices for milk.

There will naturally be some cancellations of contracts during the coming cancellation period by men who are going out of business and by a few others. But there is every indication at this time from all parts of the League territory that the dairymen are going to stick by the only weapon they have to maintain their rights in the milk market.

For a General Meeting Week

THE idea of a winter show of all of New York State's products, advocated by the State Holstein-Friesian Association and by others, is excellent. Such a show would help to emphasize the fact that New York is a leader in agricultural products and pursuits, and it would bring together all or nearly all of the annual meetings of the State's many associations at the same time and place.

As it is now, many of these meetings conflict in date, and, because they are held at widely separated points, it is difficult to secure good attendance. A big Winter Show and Convention Week in Syracuse would improve the different conventions, cost each organization less money than at present, and help all of the organizations to work closer together for the benefit of the farmer.

A Warning to the Editor

DEAR SIR: I have a faint recollection of an adventure with chicken thieves in my younger days, but, as I remember it, the Duff Collection of American Firearms was not at that time even projected. It is now, however, pretty well completed. When the present stress of weather and finances has somewhat moderated, I might possibly be able to demonstrate at your editorial parlors fifteen minutes of a good time and the theory and practice of the breech-loading small-arm. With this on your mind, I trust that you will be moved to a satisfactory explanation of that editorial entitled "Chicken Thieves," in which your memory failed to remind you that I was the one who chased the thieves away while you cowered under the bed!

With kindest regards, GEORGE DUFF.

LINCOLN, THE MAN OF THE PEOPLE

WHEN the Norn-Mother saw the Whirlwind Hour, Greatening and darkening as it hurried on, She bent the strenuous Heavens and came down To make a man to meet the mortal need. She took the tried clay of the common road— Clay warm yet with the genial heat of Earth, Dashed through it all a strain of prophecy; Tempered the heap with thrill of human tears; Then mixed a laughter with the serious stuff. It was a stuff to wear for centuries, A man that matched the mountains, and compelled The stars to look our way and honor us.

The color of the ground was in him, the red earth; The tang and odor of the primal things— The rectitude and patience of the rocks; The gladness of the wind that shakes the corn; The courage of the bird that dares the sea; The justice of the rain that loves all leaves; The pity of the snow that hides all scars; The loving-kindness of the wayside well; The tolerance and equity of light That gives as freely to the shrinking weed As to the great oak flaring to the wind—

"Four-score and seven years ago—"

Executive Mansion

Washington, Nov 21, 1864

To Mrs Binley, Boston, Mass,

Dear Madam,

I have been shown in the file of the War Department a statement of the Adjutant General of Massachusetts that you are the mother of five sons who have died gloriously on the field of battle. I feel how weak and fruitless must be any word of mine which should attempt to beguile you from the grief of a loss so overwhelming. But I cannot refrain from tendering you the consolation that may be found in the thanks of the Republic they died to save. I pray that our Heavenly Father may assuage the anguish of your bereavement, and leave you only the cherished memory of the loved and lost, and the solemn pride that must be yours to have laid so costly a sacrifice upon the altar of freedom.

Yours very sincerely and respectfully
Abraham Lincoln

On the walls of Brasenose College, Oxford University, England, this letter of the "rail-splitter" President hangs as a model of purest English, rarely, if ever, surpassed.

To the grave's low hill as to the Matterhorn
That shoulders out the sky.

And so he came.
From prairie cabin up to Capitol,
One fair Ideal led our chieftain on.
Forevermore he burned to do his deed
With the fine stroke and gesture of a king.
He built the rail-pile as he built the State,
Pouring his splendid strength through every blow,
The conscience of him testing every stroke,

To make his deed the measure of a man.

So came the Captain with the mighty heart;
And when the step of Earthquake shook the house,
Wrenching the rafters from their ancient hold,
He held the ridgepole up, and spiked again
The rafters of the Home. He held his place—
Held the long purpose like a growing tree—
Held on through blame and faltered not at praise.
And when he fell in whirlwind, he went down
As when a kingly cedar green with boughs
Goes down with a great shout upon the hills,
And leaves a lonesome place against the sky.*

—EDWIN MARKHAM

The Land of Fur Overcoats

The Great North Country of New York

I AM writing this letter from St.

J. VAN WAGENEN, JR.

of it is on the whole a wide and level or gentle rolling plain with a slight slope toward the big river. There is not what we would call a really good steep hill in all of northern and western St. Lawrence and the same is true of Jefferson. Of course the region is long on climate and there is a fairly large collection of stock jokes relating to the weather. I think I have heard most of them—among others the statement that "snow is not really fit to use until it is at least two years old." Still, I think that these jokes rather libel the region by overstating the facts. True—winter is a real event and sleighing is rather dependable, but the elevation above sea level is slight and plenty of good corn is grown and the silo is well-nigh universal. After all—it is never a really bad climate if you can grow good corn.

It is the North Country of which I write. I came here first almost thirty years ago—nominally to attend the State Dairymen's Association at Watertown, but more specifically I imagine, to visit a youngster who had been a boy friend in college and was just then Superintendent of Schools at Gouverneur—and some how circumstances have decreed that for at least a majority of the last twenty-five years I have spent from

Lawrence County where I am doing a week of Farm Bureau Community meetings. There are several fairly definite and distinct geographical divisions of our State—different in soil, topography, climate and agriculture. These are the Champlain Valley, the Hudson Valley, the Island, the Central Plateau, the Southern Tier, the Finger Lake Region, the Ontario Shore and the North Country—to say nothing of the Adirondack wilderness—the last constituting a really big area of our State which is almost absolutely devoid of agriculture.

Three Main Agricultural Industries

The North Country has three main agricultural industries. Far and away the most important is milk making and

No Fur Overcoats for This Job, Even in the North Country

a week to a month each year up here in agricultural work.

I feel as if I had come to know and understand something of this corner of the State. If I were to bound it I would say: On the south by Black River, on the west and north by Lake Ontario the St. Lawrence River and the Dominion of Canada, and on the east by the Champlain Valley and the Adirondack mountains. It comprises the larger part of Lewis County, most of Jefferson and all the arable portions of St. Lawrence and Franklin. Perhaps a little of Clinton might be added to the domain. This may not sound very big, but it does make quite a showing on the map of the State. St. Lawrence is the largest of our 61 counties. It holds almost one-tenth of all our dairy cows and out of it flow rivers of milk beyond computation. Much of Jefferson also has a very highly developed dairy industry.

An Adopted Name

The region is learning to call itself "The North Country" and to capitalize the value of the phrase. The City of Watertown advertises itself as "The Gateway of the North Country" and the leading hotel proclaims itself "The North Country's Best Tavern for fifty years." Say what you will—there is something in a name and the persistent reiteration of a phrase or idea. Long before the vogue of our very famous Dr. Coue and his theory of the cure of disease by auto-suggestion, an Englishman wrote a limerick to the effect that

"There was a young man of Kilpeacon
Whose nose was as red as a beacon,
But by saying "It's white"
Twenty times day and night,
He cured it and died an archdeacon."

Perhaps if the North Country proclaims its advantages loudly enough it will be as if it had all of them.

Some of this region is Adirondack foot-hills-rough and steep and not very fertile—not as good as the more rounded hills in other parts of the State. Most

many sections do absolutely nothing else. A generation ago it was cheese in the southern part of the belt and butter up toward the Canadian line. Now the trail of the milk shipper is over it all, but many cheese factories are still in operation and in many instances the past season these primitive cross-roads factories have exceeded the pooled price for liquid milk.

Then down on the very level, heavy clays of Jefferson County is a region where the timothy plant is especially at home. Surely the best clean timothy hay in our State comes from here. It is a type of farming which reduces labor to the minimum and which on the whole has in the past, made money for the men who have followed it, yet I feel that it represents soil mining rather than soil conservation and in the end the results will be disastrous.

Up in Franklin County and further east in Clinton, is a region where the potato seems to be at home as almost nowhere else—a combination of light soil, high altitude and cool seasons seeming to render that finicky plant almost free from the long list of diseases that in most places make the growing of it one long conflict. The little village of Chateaugay is said to ship more potatoes than any other railroad station in the State.

Of course this region had once, great resources of lumber, but the country was level and easy to clear, so most of it is gone although the Adirondacks still continue to contribute forest products, especially pulp wood.

Rich in Minerals

Geologists say that St. Lawrence County is a veritable museum of minerals and metals—no area of its size having a greater variety. Talc is the outstanding mineral product, but promising zinc deposits are being worked and iron has been mined and smelted in a desultory fashion for very many years.

Of course the North Country's great

Potatoes Carman, Cobbler, Noblight, Russet, Mountain, Ohio, Rose, others. C. W. Ford, Fishers, N. Y.

perennial and inexhaustible wealth is in her water-power. It has the American shore of the St. Lawrence, with its rapids and in addition a multitude of small streams along with some respectable sized rivers that come tumbling down out of the Adirondacks, and these mountain streams have a permanency in time of drought that is entirely unknown in the rest of the State. Many tens of thousands of horsepower have already been developed and as yet there has been made only a beginning. There is surely enough potential water-power available to light every home and turn every wheel in this whole region. Current for general heating purposes is another matter, because to warm an ordinary home means a tremendous consumption of power.

The People Themselves

After all, the most interesting features of any region is not the agriculture or the geography or the geology, but the people themselves and I feel that the North Country is particularly interesting in this respect. Sometime I hope to write concerning the racial stocks of our New York State farm people. In any case I must confess to a warm liking for these folks who live up here within sight of the realm of His Majesty, King George.

There is—or was—one man of the North Country of whom I would like to set down a word of tribute and remembrance.

I think it must have been at least a quarter of a century ago that I first met Andrew Tuck of Lisbon, and this acquaintance was renewed and ripened through subsequent years. I think he deserves to be numbered in that fine group of farmers who in simple, unpretentious ways have adorned the life of our State. He was a most successful farmer, a loyal friend, a man of stern standards of morality, a genial philosopher, a devout Catholic and a very courtly Irish gentleman. Many is the time I have led him to talk of his youth and life in what was still the pioneer period of this corner of our State. Best of all I liked to have him tell—with his chuckle and twinkling eyes—of how many years ago—long before the days of the Raines Law and local option, he, as one of the old Excise Commissioners induced another member of the Board to stand with him, and the two of them as a majority of that body refused to issue a liquor license and thus made Lisbon "dry" in the days when men stormed, or jeered at him as a crack-brained fanatic. Thus locally he anticipated the 18th Amendment by forty years.

He himself came up out of incredible struggle and poverty as the child of a very recent Irish immigrant, but he gave to all his sons a university education and was himself a prophet and leader, zealous in all goodworks. Not so many years ago full of days and honor he laid down his tasks and went "over there." So I give you remembrance and greeting—Sir Andrew Tuck.

Looking Ahead With The Poultryman

(Continued from page 111)

pected, of course, consisting of a downward sweep as spring approaches, hovering on a low level till fall, then rising again, reaching the high point in November and December instead of in January and February as many believe. The same comparison with 1922 seems reasonable in the case of poultry prices.

To what extent producers should try to expand further depends largely on the individual case. Broadly speaking, larger results from the investment and energy now being expended rather than indiscriminate expansion seem to be advisable as we can't tell much about what is beyond us in 1924. Too many people must not abandon other lines and go into poultry production or the balance will be destroyed again. And destruction of the balance, the economists tell us, is what usually causes a period of prosperity and expansion to come to a close and be followed by one of contraction and depression.

Have taken the American Agriculturist for 12 years and like it.—**ADELBERT COLE**, St. Lawrence County, N. Y.

A complete fertilizer service to suit your individual needs

Developed after consultation with representatives of the Department of Agronomy of the State College of Agriculture.

G. L. F. FERTILIZERS

Dependable Quality

1. High Analysis Mixed Fertilizers—contain not less than 16 units of plant food per ton. Use high analysis fertilizers, applying a smaller amount to the acre.

2. Acid Phosphate—guaranteed 16% available Phosphoric Acid, thoroughly cured, milled and screened, containing a minimum of moisture.

3. Raw Materials—for shipment in straight, assorted or less than carload lots. The best quality materials at attractive prices.

Prof. E. L. Worthen of Cornell says—

"The Grange League Federation Exchange deserves credit for having developed a most progressive program for 1923. It offers a service which New York farmers should appreciate. It will enable them to secure readily the necessary fertilizers or fertilizing materials to follow the recommendations of the College of Agriculture. It is indeed a service long needed in our New York agriculture and I trust farmers generally will accept it as such."

Let the G. L. F.—a farmers' organization, owned by farmers,—buy your fertilizer for you.

Your local G. L. F. agent will take care of your requirements, or if there is no local agent in your community, write

The Cooperative Grange League Federation Exchange, Inc.

Dept. E, Byrne Building, Syracuse, N. Y.

Learn the truth about Fertilizer

Commercial fertilizer is not magic. It is no substitute for work, or for farming brains. It will not make a successful farmer out of a shiftless, ignorant failure. Fertilizer varies in quality like corn or tobacco or cotton, and some brands are worth more than others. Good fertilizers, like Royster's reliable old mixtures, are a godsend to good farmers who learn how to best use them to make money.

Nearly forty years experience enters into the making of the Royster mixtures, and hundreds of thousands of the country's best farmers pin their faith to this famous old brand.

For advice about the use of fertilizer, write to Farm Service Department, F. S. Royster Guano Company, Baltimore, Md.

ROYSTER

Field Tested Fertilizers

For Good Plowing Choose E-B

The size and quality of your crops depend first on a good seed bed. The soil must be plowed to an equal depth. The E-B Foot Lift Sulky Plow makes this an easy job—easy on the driver, easy on the team. It is light draft because plow is more compact and carried on higher wheels; is closer to the team and wheel bearings are better lubricated.

Powerful foot levers enable driver to lift the plow from the furrow or force it into the ground leaving hands free to handle the team. Equipped with E-B Quick Detachable Shares, the only shares that can be put on or taken off entirely with the hands—no bolts, nuts or tools needed. Changed in 5 seconds. Enables you to do sharp share plowing at all times, saving delays and speeding up the plowing.

See this Plow at your E-B dealer's or write us for free illustrated literature.

Reclaiming Old Orchards

Winter Work That Pays in Money and Satisfaction

BACK of almost every farm in New York State there is an old farm-home apple orchard. In many cases neglected it stands or rather "sprawls," for years a home eyesore, and a neighborhood "lodging house" of orchard pests innumerable and costly, a source of annoyance and loss. Experience shows that it can in many cases be reclaimed profitably to real value and beauty. Apple picking and corn harvesting accomplished, the cattle safely housed in the cold months, and a good start on the woodpile, why not give the old orchard a good chance—a fighting chance if it is worth it at all. If not, coal is high this winter, and apple wood is good fuel.

To trim or not to trim—that is the question. If there is a large per cent of fairly sound and thrifty trees in the orchard and most of these are of some commercial value, it pays to trim. If not already in the tool house, we will need on the job according to hands, two good pruning saws (single edged, one long and one short), pruning shears of best quality and a pole shears or pole-saw; also, a strong light ladder 18 to 24 feet long.

For old trees, the earlier you get at the job in the winter, the better. The pruning of younger trees may be put off until early spring or maybe late winter. Choose if possible, clear cold weather. First, if your orchard is "brambly" and encumbered with many dead and fallen limbs "clear the decks." Why not at once cut out and remove the trees you wisely decide are not worth the work in view?

Cut out all the deadwood to start with. Then remove all broken and diseased limbs, clear to the main stem or at least to a "lateral" branch. Next, starting at the top and working around in the natural tiers of the tree's framework, take out large or small interfering and overlapping branches, always sawing your limbs off in such a way that there is no chance that its falling will make a bad tear in the tree near the point of issue. Do not prune all the wood off the lower branches, or the lower branches themselves, unless in the way when cultivating or harvesting, and do not cut all the small fruiting branches off the middle of the tree—just to make a "neat job."

We trim trees chiefly to open them up to light and air. Never remove a branch needlessly, even if it cramps the woodpile. Water sprouts are a nuisance, but even they may be turned into apple blessings. Space the best sprouts as they come, about two feet apart, and cut them back liberally about a third or half with your shears and they will make in time your new fruiting wood and part of a new framework.

Cut your top down gradually if it is inconveniently tall. Go on gradually with the whole pruning job—two or three years at least, following a long period of neglect and abuse. Get the best bulletins from your county agent. Attend, if possible, a pruning field demonstration. "Saw wood" and say nothing."

Spray and Fertilize

When you have trimmed all the trees, clean out, disinfect and patch up any bad trunk-holes, give the entire lot of trees in the orchard a good but gentle scraping with the business end of an hoe. Hitch up Tom and Jerry to the spray wagon, fill it up with dormant spray, and give your "tramps" a thoroughly liberal shower. In early spring plow shallow or disk thoroughly,

spreading on and harrowing in a good coat of barnyard manure or turning in the pigs.

When the late spring "blow" begins to fall, shoot the codling moth worm spray at them. Agent will give you details—"please be brief." That's about all there is to it—on paper. And, you've done something. You will think so when those old orchards come back at you in the fall, and with a little judicious "thinning" also of fruit, you'll have apples in quantity and quality from that same orchard, that will make you sit up nights—eating.

REPAIRING BROKEN TREE CROTCH

Heavy apple and pear crops this last season taxed the strength of the trees, and where the heavily-laden branches were not braced, considerable breakage took place.

A well-made bridge graft—a means of saving valuable young trees girdled by mice and rabbits

which had not been trimmed during the first few years in a way to avoid weak crotches. Where cracking has taken place or danger seems imminent of splitting, some means of guying should be employed to prevent further damage. The method to follow varies so much with different trees that it is impossible to follow any one set rule.

One of the simplest yet efficient means of guying a crotch is to insert a hook bolt through each limb. The hook bolts are

placed in two limbs with the hooks toward each other. The height above the crotch depends upon the size, position and length of the limbs. Seldom is it advisable to have them nearer than 6 feet to the crotch, while they may be as far from the junction of the limbs as 8 or 10 feet. The end link of a stout chain is placed over one of the hooks, while the other hook catches a link in the chain which comes at the right place to make the bracing sufficiently taut to keep the limbs from parting. The remainder of the chain can be cut away.

Where there are three or four joining limbs which must be guyed together, a good method is to place a hook bolt through each limb at the proper place, pointing the hooks toward the center of the tree. Each hook is used to hold the end link of the two chains, one going from the hook to the nearest limb on the right and the other to the nearest limb on the left. Where the guy must be kept perfectly taut at all times a turn-buckle rod or another bolt is better than a chain. The rod also permits tightening of the guy should it later become necessary. A long bolt is more servicable also than a chain if the guy must be made within a foot or so of the crotch.

The bolt or rod used must be thick enough to fit snugly in the hole bored through the limb and must project a quarter to a half inch beyond the washer at the end. The thread of the bolt must also be long enough to permit the drawing in of the bolt as the nuts are screwed up tight against the washer. At the end of the job all of the exposed parts of the bolt, nuts and wood should be tarred to prevent infection of the tree and damage to the wood.

Look in the box that holds the corn just before you turn the planter to start on another round. This beats running back across the field for the sack of corn when boxes become empty at the other side of the field.

Caring For The Farm Truck

Some Money Saving Suggestions on Winter Driving

HAVING filled the radiator with an anti-freeze solution too many of us think we have done our duty toward the farm truck or motor car. We have not. Not if we expect to get the greatest efficiency, economy, and the least trouble from either machine during the cold months.

An automobile engine is essentially a heat machine and it must be remembered that its greatest efficiency is obtained by keeping it as warm as possible without becoming too hot. Hence the value of a hood cover with a radiator curtain that can be adjusted. Cold weather retards the process of carburation, thickens the lubricants, increases crankcase oil dilution, and aggravates a number of other things that give little bother when the weather is warm and favorable. Keeping this in mind will simplify winter driving troubles.

With the coming of cold weather and lower temperature there is a corresponding drop in the efficiency of the electrical system, especially of the bat-

tery or the engine is one that starts hard, it is the height of folly to start it by the continual use of the starting motor, because it takes a lot of normal running for the generator to put back into the battery the current taken out by the starting motor. A frequent result is a drained or dead battery or perhaps a freeze-up. The engine can be primed with high-test gasoline or ether, or limbered up by hand or even started with the hand crank. Holding out the clutch with the foot pedal while using the starting motor prevents the motor from revolving the transmission gears in their lubricant, stiff from cold and thus saves the additional strain on the battery.

Dangers of Choking and Racing

In winter guard against the temptation to run the engine too long with the carburetor choke closed and thereby letting an excessive amount of raw gasoline be drawn into the cylinder where it works past the pistons and

The farm truck is a valuable asset. Because it is a machine it does not mean that it can be neglected

tery. There is a heavier load placed upon it in winter and it is therefore necessary to conserve current as much as possible. A battery not properly charged freezes easily, and its specific gravity should be tested frequently with a hydrometer to ascertain whether it is at the proper mark. Make sure the battery is securely fastened in place and its top dry and clean so no leakage occurs. Terminals must be tight and should be coated with vaseline to avoid corrosion and current losses. See that the ground connection is tight, a loose one consumes current.

Winter driving with its heavier drain on the storage battery means that the charging rate of the generator should be increased, particularly on generators equipped with third brush regulation. The third brush is usually held in a slot visible from the exterior and adjustment is made by loosening the binding screw and then sliding the brush in one direction or the other. The correct direction can be determined by watching the ammeter which will indicate the increase in charging current.

Check Up the Electric System

The commutator should be cleaned and new brushes installed if necessary. If the mica insulation between the commutator segments is too high it must be undercut. Otherwise sparking and poor contact will result. Oil the generator. The same treatment applies to the brushes of the starting motor. All connections from starting motor to switch should be tightened. Chafed wires should be looked for and if found heavily taped or replaced.

To save current losses through leaks or the resistance due to poor connections and insure proper working of the electric system, all wires should be inspected especially at junction boxes, relay switches and lamps. Old lamps consume more current than new ones, consequently it usually pays to replace them. If a great deal of night driving is done, it is sometimes good policy to change the lamps for ones of lower candle power. See that the ignition system is working properly—it can waste current liberally.

If the car is kept in a cold garage

down into the crankcase oil. Be sure the engine is perfectly warm before making it pull a load and never race a cold engine because the oil is still somewhat congealed and in its stiffened condition it may not lubricate the parts as it should for the time being. The result may be ruined cylinders or pistons.

The wise driver drives slowly for a while after starting out, in order that the stiffened lubricant in the working parts away from the heat of the engine, the differential for instance, may have ample chance to become of a consistency to lubricate properly.

By keeping these suggestions in mind, much spring overhaul work and many of the difficulties attendant on winter driving can be avoided.

Use Low Gears in Heavy Weather

Practically all modern trucks are made with the gears arranged so that the car may be driven in low, intermediate, and high speeds. Some foolish drivers talk about having forgotten low speed and never needing to use it, etc., but this is one of the sure signs of an amateur driver, or of the man who prefers to show off the power of his engine at the risk of serious damage to the engine, or at best of stalling in the middle of an incline.

No truck engine is designed to do all of its work at high speed. The first and second gears are designed to assist the engineer in pulling extra heavy loads to which it is not accustomed. If the driver does not take advantage of them he is subjecting his car to an undue strain, and should not be surprised if something gives way on it.

When approaching a long steep incline or a long pull through "bad-going," get up a fair speed, if possible, so that the momentum of the car will carry it at least part of the way. As soon as the engine begins to lose speed, shift to second, and if necessary to first. Also at the first sound of a knock, retard the spark a little, but remember, that it is better to shift to the lower speed than to retard the spark, because the best power of the engine is developed with an advanced spark.

Improved and Pedigreed Seed

PEDIGREED BARLEY. Cornell's two favorites. Featherston No. 7, six row. Alpha, two row. For description see our advertisement January 20th issue or send for circular. Price, Featherston No. 7, \$2.00; Alpha, \$2.25.

PEDIGREED SEED OATS, cleaned through thoroughly equipped warehouse and treated for prevention of smut. Varieties—Cornellian, Victory, Crown and Golden Rain. For description see our advertisement January 20th issue or write for circular. All varieties, \$1.50 per bushel.

SEED CORN. New York State grown from selected ears in special fields.

Pedigreed Cornell Eleven and Improved Oil Dent. For description see our advertisement January 20th issue or send for circular. Screened, \$3.00 per bushel. Tipped and butted for accurate planting, \$5.00 per bushel.

SOY BEANS. Black Eyebrow, an early sort. Bids fair to be most popular sort in New York and Pennsylvania. Price, \$4.50 per bushel.

HUBAM SWEET CLOVER, Scarified, high germination and purity. Grown in New York. Price, small lots, 50 cents per pound, postpaid. Bushel lots or over, 40 cents per pound.

All prices bags free, freight paid. All orders to be accompanied by 25% cash. 3% may be deducted if sending all cash with order.

Investigation through Farm Bureau or Agricultural Colleges invited.

only \$48 for a FAIRBANKS-MORSE 'Z' Engine

F. O. B. FACTORY
1½ H. P. Battery Equipt

Increase your farm profits!

Here's a helper that will do a hundred jobs around your farm; save time and money all day long every day; do more work for less money than any other aid you can employ.

The Fairbanks-Morse "Z" Engine is helping more than 350,000 farmers increase their farm profits. Instead of wasting their own valuable time and strength, or employing high-priced labor, they are turning the time-killing drudgery jobs over to a tireless, willing "Z" Engine.

The 1½ H. P. Battery Equipt Engine uses gasoline alone. Has high-tension battery ignition, hit-and-miss governor and balanced

safety flywheels. Control lever gives six speed changes. Carburetor requires no adjusting. A remarkable value.

The magneto equipt 1½ H. P., 3 H. P., and 6 H. P. are real kerosene engines, but operate equally well on gasoline. Have simple high-tension oscillating magneto. Throttling governor assures steady speed. Prices F.O.B. Factory. Add freight to your town.

1½ H. P. \$71 3 H. P. \$105 6 H. P. \$168
Other "Z" Engines up to 20 H. P.

Write for complete details. See the engines at your dealer's.

\$44,282,000. More for Potato Growers

That is the approximate additional profit growers could make if the entire potato crop of the United States were graded by Boggs Potato Graders.

Buyers willingly pay 25c to 50c more per bag or barrel for Boggs machine-graded than for hand-graded potatoes because they then know there will be less than 3% variation in size.

Boggs Potato Grader

The Standard Grader

will sort and grade 75 to 700 bushels of round or long potatoes per hour (depending on size of grader) in U. S. Government sizes, eliminating culls and dirt. Equals the manual labor of from three to five men. Impossible to bruise or injure potatoes, as they are graded by an endless belt.

Operated by hand, motor or engine. No experience necessary. Six models, \$40, and up.

Write for interesting booklet.

A "Shop" Story on the A.A.

UNCLE Frank Manders, one of American Agriculturist's salesmen, tells a good story of how he sold a subscription for the paper to two ladies who were trying to teach a calf to drink. The story goes as follows:

"I stopped at a place one night where two ladies were trying to feed a calf out of a pail, but could not get the calf to drink and as I went up to them I said 'Good evening ladies. My name is Mander. I am the field man for the American Agriculturist. Do you take the paper?' 'No' one lady said 'We are not interested in papers just now, we are trying to get this calf to drink.' 'Well,' I said, 'The American Agriculturist has a Service Bureau that solves any problem that confronts you or collects any debt free of charge for any paid-in-advanced subscribers. Now, lady, if you will just take a five-year subscription which is only \$3 and you never will be sorry. It's a gift at that price. Why, I have taken it myself since 1876 and gave \$1 a year for a great many years. Now the proposition is this: I will teach your calf to drink and give you a five-year subscription both for \$3.' 'That's a bargain, sir. Here is the pail. Just let me see you make that calf drink.' I got over in the pen, caught the calf, backed it up in the corner, stuck its head between my legs, took the pail in my left hand, placed my right hand on the top of the calf's head with my middle finger in its mouth, pressed its head down into the milk and it commenced to drink. 'Well,' she said 'Mary you go to the house and get me \$3. I'm stuck for he has done the trick.'"

NEWS FROM ALBANY LAWMAKERS

The removal of Commissioner Law has been announced.

Marking time would very well state legislative progress during January.

What is known as Campbell-Downing bill, to limit all compensation insurance to State fund, is attracting much attention.

Speaker Machold when home at the week end made public announcement that he would oppose repeal of Mullen-Gage law.

The Lusk law as commonly called compelling teachers to take oath of allegiance to State and Country has received considerable discussion recently.

The Senate is in rather a difficult situation. It takes twenty-six votes to pass any bill or take any action that is controversial. The Democrats have just twenty-six, but with one of their members sick last week, another this week, matters that are to be decided on party lines are very likely to be delayed.

A bill has just been introduced in the New York State Legislature by Senator Ryan in the Senate, and by Assemblymen McGinnies in the Assembly, calling for an appropriation sufficient to build a Coliseum on the New York State Fair Grounds. It is the hope of those who are supporting the bill to get the Coliseum built in time for use of the Great World's Congress which is to meet in Syracuse during October, 1923.—By Our Special Correspondent.

IN NORTHERN NEW YORK

Essex Co.—Rain and snow have helped the water shortage generally. Wells and cisterns on many farms have been dry for some time. Two heavy snow falls have covered meadows sufficiently to protect grass and grains and have provided good roads for the letterman. Stock seems to be wintering very well. The Crown Point Co-operative Creamery paid 54 cents per pound for butterfat. Dairy cows are selling for \$35 to \$50, beef, 8 to 10 cents, eggs, 60 cents a dozen, potatoes, \$1 a bushel.—Mary E. Burdick.

Jefferson Co.—At present we are having more snow than we have had in many years and farmers are taking advantage of the fine sleighing, drawing

Rural Improvement

By F. A. WAUGH

EVERY rural district needs better roads, better school buildings and grounds, better farm planning, better public buildings, more play-grounds, and the other conveniences and embellishments which the cities always have, but which the country usually lacks. The present book explains clearly just what these requirements are and how to get the work done.

Illustrated. 5x7 inches. 320 pages. Cloth. Net \$1.75

American Agriculturist, Inc.
461 Fourth Avenue, New York City

wood and hay. Milk brought \$2.86 per cwt. for 3 per cent milk at the local plant in December. January prices will be slightly less, it is reported. Butter, 60 to 62 cents, veal, 10 to 11 cents, eggs, 45 to 60 cents and in good demand. Dressed poultry, 28 to 30 cents. There have been several chicken house robberies of late in our locality. Some farmers have lost some fine breeding turkeys. Hay is moving a little better at \$10 to \$12. Several farms will change hands March 1st. First class tenants are scarce. Oats are bringing 45 to 50 cents a bushel. Mill feeds are high.—C. J. Doxtater.

Warren Co.—Several heavy snow falls put roads in fine condition. Things are very quiet in this section, getting wood and cutting ice are taking most of the time of the farmers. Stock of all kind wintered well. Hay is quite plentiful on account of the excellent crop last season with correspondingly low prices. The township recently purchased new snow plows and have kept the state roads open for automobiles all of the time. They use government auto trucks for power. Butter is 40 cents a pound, eggs, 38 cents a dozen, potatoes in little demand.—R. T. A.

IN WESTERN NEW YORK

Genesee Co.—Many farmers in this county are busy feeding lambs which have been shipped in here from the West. Some have been brought from as far West as the State of Washington. This branch of the live stock business seems to go particularly well in Genesee and neighboring counties. The nearness to the Buffalo live stock market seems to be one of the factors in its favor. To date 19 carloads of lambs have come into the county. On account of the nearness to market it is usually easy to load the stock and get them in during the period of high prices. The short haul to Buffalo insures arrival in good prime condition.—J. C. J.

Steuben Co.—This section is in the grip of the heaviest snow storm that we have had for many years. Roads are blocked. Mail carriers have not made their trip for some time. Herds which reacted in the first tuberculin test which was held last August are now being tested again. The potato market is very dull, quotations varying from 40 to 45 cents for table stock, eggs, 40 cents a dozen, butter, 40 to 45 cents a pound. Much lumbering is being done, as the result of the destructive wind storm last season which blew down much timber. Hired help is very scarce, wages extremely high.—C. H. Everett.

Wyoming Co.—Plenty of snow for good sleighing during the latter part of December. Many farmers are drawing water for stock. Quite a few are fattening lambs this winter. Wheat has gone up some, reaching the present price of \$1.40, butter 50 cents a pound, eggs 58 cents, hogs 13 cents, beef 11 to 12 cents.—J. H. E.

Cayuga Co.—Plenty of snow and cold weather. Prices are generally improving with the result that farmers are gaining confidence for the coming season.

CHANCE TO GET FARM HELP

There will be opportunity at Farmers' Week at the New York State College of Agriculture to secure some farm help. The Winter Courses close with Farmers' Week. In these courses are many students who desire farm work. Among these are many who have lived and worked on farms. Some of them are from 24 to 30 years of age, and have had sufficient experience to fit them to bear the responsibility of running farms as superintendents or managers. These, of course, should expect pay considerably above ordinary rates for farm hands.

Others have had less, but nevertheless good, experienced, and can fill places as foremen and experienced farm hands. Still others have had little experience on farms and should expect little pay at first.

It is planned to have students meet farmers daily, except Wednesday, at 1 o'clock at the office of farm practice and farm superintendence, in Stone Hall, to arrange for employment.

The Car for the Woman On the Farm

for Economical Transportation

Utility Coupé
\$680

f. o. b. Flint, Mich.

The country woman needs her own car.

When the farm has only one car it is usually in use on the business of the farm, just when the wife or daughter needs to go to town or to a meeting or church or to make calls.

The Chevrolet Utility Coupé is an ideal car for the purpose, as it has full weather protection, a high-grade Fisher Body upholstered in gray whipcord, plate glass windows, which can be instantly lowered or raised to any desired position, a mammoth rear compartment for luggage, bundles, a jar of butter, a crate of eggs, or even a trunk.

The inside of the car can always be kept clean, because all packages can be carried in this rear compartment.

The Utility Coupé is comfortable, easy to operate, and has ample power to handle bad roads.

When Buying Acid Phosphate

THE statement is often made, "Acid Phosphate is all alike; anyway, it is only 16 per cent." Now, 16 per cent acid phosphate is not all the same. There may be as much difference between two makes of 16 per cent acid phosphate as between black and white. Some acid phosphate will contain a maximum of 10 per cent moisture, or no more than 200 pounds to a ton, whereas some of it will contain from 300 to 350 pounds of moisture. One product may be thoroughly cured, doubled, milled and screened, well seasoned; the other, a product that is shipped out as soon as it is made, screened but once, gummy and sticky, undrillable, and saturated with free phosphoric acid, which will cause it to rot and to eat the bags.

The grade of phosphate rock from which acid phosphate is made will largely determine the quality of the

ultimate product. If an excess of iron and alumina is present in the phosphate rock, it will tend to make the acid phosphate gummy and sticky, which destroys the drilling qualities of the goods.

Policy of Penny Wise, Pound Foolish

If a fertilizer does not drill easily and uniformly, it is the most wasteful material that the farmer can handle. He will lose valuable time with it during the planting season, when time is his greatest asset. He will be unable to distribute it equally over each foot of surface and consequently gets nine-tenths of a crop instead of ten-tenths. He may have saved \$1 per ton in the purchase price. If he used one-tenth of a ton, or 200 pounds to the acre in his application, it means that in the first cost he has saved 10 cents per

acre. For the sake of this 10 cents he has sacrificed several hours of his valuable time and fertilized nine hills of corn where he should have fertilized ten.

Going further into the manufacture of acid phosphate, a cheaper grade may be manufactured by using in the process what is commonly known as "sludge acid," or sulphuric acid, which has been first used in refining petroleum. As a result, the acid phosphate may be gummy and sticky, and otherwise undesirable. It is not a safe investment if the price should be \$2 per ton lower than that of acid phosphate made with "clear" or unused sulphuric acid.

What Constitutes Good Material

This brings us to the point of what constitutes the best acid phosphate obtainable. The answer is obvious. To be sure that he is obtaining the best

quality of acid phosphate, the farmer should insist upon acid phosphate made only from phosphate rock containing a minimum of the oxides of iron, and alumina and "clear" sulphuric acid, or sulphuric acid which has not been used previously. He should insist upon the goods being thoroughly cured, milled and screened, free from an excess of free phosphoric acid, and containing a maximum of not over 10 per cent moisture.

I might emphasize the point of "milling and screening." In their anxiety to meet competition, manufacturers of acid phosphate sometimes ship goods directly from the original pile made when the goods were taken out of the acidulating dens. Acid Phosphate in the first curing process after it is removed from the dens has a tendency to harden and become lumpy. It is possible to eliminate this by milling and screening the material before shipment is made and after the goods have been thoroughly cured and seasoned. The farmer, of course, is the loser when he buys Acid Phosphate that has not been milled and screened because he runs great danger of delays at planting time and of an uneven distribution of fertilizer over his land.—W. L. GAY.

Don't Buy a Rod of FENCING

Gates,
Roofing
Paint~

Until
You Get This
Money Saving
Book

FREE

I mean every word of it—I want you to see the EXTRA low prices I am making this season—I want you to get my new Bargain Book before you buy Fencing, Gates, Roofing or Paint. I want you to see how much Jim Brown's Freight Prepaid, Factory Prices will save you. It will cost you only 2c to mail the coupon—I'll send you my big 104-page book by return mail—it will save you many dollars. I don't believe such wonderful bargains as I am making this season in My New Bargain Book, have ever before been offered.

750,000 Farmers Buy From Jim Brown

For years I've been saving my customers big money. I've been giving them bigger, better values than they could get elsewhere. That's why over 750,000 farmers continue to send their orders to Jim Brown whenever they need Fencing, Gates, Roofing or Paints. Read what a few of them say. I get thousands of letters just like these.

Saved Nearly Half

"Received my order of fence and roofing and am more than pleased. You have sure acted fair and square with me. It is the best fence and roofing I ever saw. I saved nearly half on my order."
C. L. RAMBO,
Steubenville, Ohio

Saved \$14.40

"Your paint is much better than I expected, in fact, I don't believe it can be beat; I didn't expect to get such good paint for so little money. I saved \$14.40 on 10 gallons by buying from you."
S. A. ELWELL,
Punta Gorda, Fla.

Saved 30cts a Rod

"I received my fencing all O. K. I find I saved about 30c on a rod by buying my fence from you and besides yours is much better fence."
HARRY COFFEEN,
Champaign, Ill.

Now just a word about quality. Low prices don't mean anything unless the quality is right. That's the point I want to emphasize. I believe I make and furnish my customers with the best quality Farm Fence, Farm Gates—Lawn Fence—Steel Posts—Paints and Roofing that it is possible to produce. My fence is made from Basic Open Hearth Steel—Double Galvanized. My Wear Best Paints can't be beat and my Asphalt Roofing lasts for years and years. Not only do I give better quality at lower prices but—

I Also Pay the Freight

That's another big saving—my low rock-bottom prices are all you pay—I pay the freight charges to your railroad station. I ship direct from my three big factories at Cleveland, Ohio, Adrian, Mich., Memphis, Tenn.,—also from Warehouses at Kansas City, Mo., and Davenport, Iowa. Everything you buy from Jim Brown is backed by Jim Brown's Iron Clad Guarantee—you take absolutely no risk. Send for my Big New Bargain Book Now—see for yourself what a nice bunch of money you can save by buying from

BUILDING UP THE PASTURES

H. H. LYON, CHEMUNG COUNTY, N. Y.

Pasture improvement is being made something of in New York, although but few farmers seem to be actually trying it out. Occasionally a man makes the attempt, and in all cases that I know where thoroughness is followed there has been satisfactory return. Improving pastures is not a cheap process. It may not be worth while where land can be purchased at low values that is convenient to use and is productive. In other cases it pays to improve pastures. I have never regretted any such improvement that I have attempted. This season I know of only one attempt in this line in my vicinity. It is a five-acre piece and was plowed last fall. It is much easier to improve a piece that can be plowed, than one too steep or stony or rough for plowing.

In this case the work was a pretty thorough job. Cultivation was well done and thirteen tons of lime were used on five acres. In seeding with oats, about 300 pounds of fertilizer were used. It seemed to me that a little more fertilizer might have been an advantage, but the oats crop was splendid and the seeding was excellent. Sweet clover was added to the regular pasture mixture, and it showed up in fine shape this last summer. The growth was almost too good for the oats crop, although if the oats had been used for hay it would have been all right. Even if allowed to ripen there would be no particular difficulty. It looks as though that five acres of pasture would be something of real value another season. Let it get a good start in the spring and not graze too closely, and it will furnish an enormous amount of feed next summer.

SOWING SWEET CLOVER AND VETCH

Will you kindly advise me when is the best time to seed winter vetch in wheat both for pasture and green manure? Also let me know something about sowing sweet clover?—S. W. P., New York.

Sweet clover is most satisfactorily sown in fall wheat or rye at any time from January to March. In general practice, two pounds per acre will suffice. Sowing with a spring grain such as barley or oats is less satisfactory, as the ground is too loose. Furthermore, the hard sweet clover seeds are not so quickly acted upon by the action of the frost when sown with a spring grain. For that reason the stand is often poor, and therefore heavier applications of seed are recommended when planted with these spring grains.

Vetch, on the other hand, gives most satisfactory results when sown in the late summer or early fall, particularly from July 15 to September 15. If vetch is sown after a later date it will make very little growth. Although the small plants will live over the winter, nevertheless the cover crop will be so weak that it will be of little value. In fact, experienced growers find that to get the most satisfactory results they must get their seedlings in early. When sown alone, from thirty to sixty pounds per acre are required.

The Martinique

Under Hotel McAlpin Management

BROADWAY, 32nd-33rd STS., NEW YORK

One of New York's Distinguished Hotels

FRANK E. JAGO -

RESIDENT MANAGER

600 Rooms—\$2.50 and up

The Martinique offers comfortable rooms at moderate rates, and in its dining rooms, which are most attractive, one finds the best food, well served and at reasonable prices; Club Breakfasts, Special Luncheons and Dinners, or a la carte service if preferred.

The hotel is situated in the center of things in general, being convenient to shopping and wholesale districts and adjacent to the theatre section.

There is an entrance from the hotel to the New York Subways and Hudson Tubes, affording direct communication with the Pennsylvania, Grand Central, and Railroad Stations at Jersey City.

More Farm Bills Sponsored in New Jersey

SINCE the New Jersey Legislature opened in mid-January, the New Jersey Federation of County Boards of Agriculture, representing the organized farm interests in the State, has had introduced nearly a dozen bills relating to farming. Last week a new measure introduced in the Senate would make the use of names, pictures or reference to dairy animals as fraudulent if used in connection with the advertising of dairy substitutes. This is similar to a statute now on the laws of Pennsylvania, with the exception that the New Jersey bill would also make the use of photographs of dairy cows fraudulent advertising.

Another measure of particular interest to the potato men of Central and Southern New Jersey would appropriate \$10,000 to the Division of Agricultural Economics at the State Experiment Station for investigation of the economics surrounding the production and marketing of fruits and vegetables. It is hoped by this means to secure funds that the State may obtain information badly needed by the potato men.

The Fish and Game law would be changed by another bill so as to give greater freedom to hounds owned by farmers and on the premises of their keepers. As the law now stands, no hound is allowed at large except during the open season for killing quail, rabbits, etc. and the owner is liable in such instance to a fine of \$20 for each offense. The proposed measure would repeal this feature, considered objectionable by many farmers.

Investigating Farmers' Markets

Growers now using the Farmers' Market at Burlington, N. J., are considering the improvement of local marketing conditions, according to Clarke W. Clemmer, County Agent in Burlington County, who has recently conducted an investigation of the Burlington Farmers' Market. Mr. Clemmer finds that practically all of the farmers are dissatisfied with the Farmers' Market in Burlington; that they favor the allotment of definite place to regular farmer patrons; and that they approve the establishment of a modern market place with a reasonable marketing fee. It is felt that such regulations could be carried out to better advantage than in the present congested street market where 20 to 30 farmers now conduct their business.

Practically all of the farmers were also in favor of definite opening and closing hours so that all farmers would have equal opportunity, and so that competition would be eliminated so far as preference of place in the market is concerned. Mr. Clemmer's census of marketing hours showed a wide difference of opinion, although the majority were agreed that Monday, Wednesday, and Friday should be the market days. Opinion was fairly well divided among the patrons of the market on the question of operating the market every day during the height of the season.

Affairs at the State College

The New Jersey State College of Agriculture at New Brunswick, N. J., will conduct a one-week course in the practical operation of tractors and gas engines, to be held at the College Farm, March 5 to 10. Professor E. R. Gross of the Rural Engineering Department will take charge of the lectures and demonstrations which will cover the practical problems of engine operation, tractor hitches, also field operation and tractor selection. A fee of \$3 will be charged to cover the cost of gas, oil, laboratory outlines and repairs. The course is open to 20 men. There are 12 different types of tractors available in the laboratory.

The Rutgers College Egg Show to be held under the auspices of the Juniors' in Poultry Husbandry at the State College will be conducted from February 14 to 16. The Experiment Station workers, egg producers, boys' and girls' clubs, students at the College and High School students in vocational agriculture are entitled to enter the contest. Sweepstakes will be offered for the grand champion in each class, while five ribbons will be given on both white and brown eggs in each class. Every entry will be scored and a score card returned to the individual contestant.

Farquhar Threshers

Meet All Demands

FOR more than 67 years we have manufactured threshers. As a result of this experience we have produced the incomparable 1923 Farquhar Thresher. They are made in many sizes to meet all demands, from those of the individual farmer to those of the largest contract thresherman. Grain-saving device at bottom of stacker saves all grain—none is blown out or lost. Self-feeder handles maximum load at all times. Has automatic bagger and weigher. Gearless windstacker puts straw where it should go—no hand work is necessary. Entire machine operates almost automatically, only half of the crews used on old-type machines are needed. Farquhar Threshers are fully guaranteed. They also come equipped with clover hulling and rice attachment if so desired.

Write to-day for full information and catalog.

Just how does Kow Kare increase the milk yield?

Maybe you have been a regular user of Kow-Kare in treating cow diseases, but you may have never fully realized that this famous cow medicine is being used regularly in thousands of dairies to increase the winter milk yield.

Both uses are equally logical. Cow Diseases—nearly all of them—arise from a lowered vitality of the genital and digestive organs. Kow-Kare removes the cause by reaching these very organs and restoring vigor. The milk yield is controlled by the same set of organs. Dry winter feeds put a greater strain on their functions and produce a lowered vitality and yield.

Kow-Kare, fed moderately and regularly, gives to the milk-making organs the added strength they need to offset winter feeding conditions. A greater milk yield cannot fail to result.

The expense of this Kow-Kare treatment is decidedly small. Most dairymen give a tablespoonful morning and evening in the feed, one week out of each month. The increased milk-profit pays for this a hundred-fold.

No cow medicine can equal Kow Kare for the treatment of actual disease. For twenty-five years it has been the standard remedy for *Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite.*

Sold in two sizes—large package \$1.25; medium 65c, at feed dealers, general stores, druggists. If your dealer is not supplied, we send postpaid.

The Best Way to Raise Best Chicks

\$10⁰⁰ up

Wishbone Valveless Blue Flame BROODER

THE best way to raise best chicks—best for YOU and for the chicks—is to put them under a Wishbone Brooder. It takes perfect care of the chicks in any weather—makes them grow more quickly into healthier, stronger chicks—eliminates losses. For you, it takes all the worry, all the trouble out of chick-raising. It requires almost no attention and never gets out of order.

The Wishbone is sturdy, simple and mechanically perfect. It hasn't a single valve, strainer or thermostat in it to go wrong. It

is easy to operate. Touch a match to the burner and a hot blue flame shoots right up. No matter how cold the weather—even in coldest Canada—it keeps chicks cozy and healthy. Thousands in use all over America.

Send for free descriptive Booklet and Testimonials NOW. PRICES:—Four sizes: 50-100 chicks \$10; 350 chicks \$16; 500 chicks \$19; 1,000 chicks \$22. A little higher in far west. Be sure of a successful season—send your order today. Our full money-back guarantee protects you.

What Makes Milk?

Leguminous Hay—Our Own Best Bet

RECENTLY I reported for the American Agriculturist the results of a feeding test on one of our farms last year where we fed a 20 per cent protein-grain ration in comparison with a 24 per cent ration. The cows in this test were all fed fine clover and alfalfa hay, and as those who read the article will recall, the cows on the 20 per cent ration gave as much milk during a 60-day period as those on the 24 per cent ration. This was as Prof. Savage had predicted to us, and has resulted in our using a 20 per cent protein ration now altogether when we have clover and alfalfa hay available. This enables us to save three to five dollars a ton on our grain bill.

Having made such a saving from just a little study of our business, we have become more alert to other opportunities for savings and I have become particularly interested in the amount of milk that can be produced

By H. E. BABCOCK

about equally good producers. The grain fed

to all of them was practically the same; the methods of handling the cows quite different. I have already drawn some conclusions on the feeding of the Holstein, which I think will result in cheaper milk production. I may report it later. In the meantime I would like to hear from American Agriculturist readers who have practical suggestions for changes.

UP TO THE INDIVIDUAL DAIRYMAN HIMSELF

We are approaching the period when withdrawals may be made from the Dairymen's League Association, Inc. There is much speculation as to the extent to which dairymen throughout League territory will avail themselves of this opportunity. One thing is sure; so far a wonderful degree of

This is May Walker Ollie Homestead the new American champion butter producer with a record of 1523.23 pounds butter. Can you identify physical characteristics that aided her in making her record?

from good clover and alfalfa hay. Let me say right here that I have a strong suspicion that we as dairy farmers have been led to think of the problem of milk production almost entirely in terms of purchased concentrates, and by so doing we have neglected our own best bet—the leguminous hay that we can grow on our own farms.

As yet, I must admit, we have no very definite evidence with which to support my position, but as a beginning I have made a little study of what our cows are actually eating and how they are producing, which I am putting down here for what it is worth. I will let those who read it draw their own conclusions, while I am drawing mine.

To get at the problem, the other day when I had a few moments time, I weighed up the feed that three different cows were eating a day. These feed weights, together with the milk weights and a description of the cow follows:

King Belle's Baldeen, purebred Guernsey, 5 years old, fresh 6 weeks. Milked and fed four times a day, on A. R. test. Day's production 73.9 lbs. Grain consumed, 18 lbs.; beet pulp and bran mixed fifty-fifty, 6 lbs.; molasses, 2 lbs.; cabbage, 36 lbs.; silage, 20 lbs.; second cutting alfalfa hay, 10 lbs. Total feed, 92 lbs.

King's Mayflower, purebred Guernsey, 4½ years old, fresh 5 weeks. Milked and fed twice a day. Day's production 35 lbs. Grain consumed, 15 lbs.; silage, 25 lbs.; second cutting alfalfa hay, 16 lbs. Total feed, 56 lbs.

Jennie, grade Holstein, 8 years old, fresh 6 weeks. Milked and fed three times a day. Day's production 63 lbs. Grain consumed, 15 lbs.; beet pulp, 2½ lbs.; molasses, 1 lb.; silage, 51 lbs.; second cutting alfalfa hay, 12 lbs. Total feed, 81 lbs.

As soon as I got my figures together as presented above, I was struck with one point which seemed to stand out like a sore thumb. With a range in production of from 35 to 73.9 lbs. there was a range in amount of grain fed of but 3 lbs. In my judgment the cows are

loyalty has been manifested in most parts of the territory. Men are doing a great deal of thinking these days, and it would seem that the more they think the more sure most men are that the only fair thing, the only reasonable thing to do is to hold true to the pooling method of marketing milk.

President Vincent, of the Broome County Dairymen's League, could not have given better advice on withdrawing from that organization than he did at the recent meeting held in Binghamton. "Think it all through to the end," he said. "Then if you do really believe that it is for your best interest and the best good of us all that you withdraw, then do so. But I believe that if you do thoughtfully and carefully think things through, you will see that your best good will be served by staying with the organization."

Some Good Coming from It

One good thing is coming from the agitation of the pooling and the non-pooling question. Men are learning to think for themselves as they have not lately done on any subject which has been presented to them. They are attending meetings where reliable men speak; they are reading everything they can get, and acquainting themselves with all phases of this important matter. Where in the beginning few understood the real meaning of the pooling system, now practically every farmer has a clear and definite idea of the advantages such a cooperative work affords.

Still another favorable result is being gained. Men have more faith in each other. More and more the spirit of animosity that for a time seemed to prevail on the part of some poolers and non-poolers toward one another is passing away. This is right. After all, it is a matter of business with us all. We cannot all look at any subject exactly alike. The best thing, the right thing, is to appreciate the fact that farmers never are so strong as when they stand together—get together and

stand together is the only watchword that will bring us out right.

The farmers of our day do not so much need instruction along definite lines of farming. What they do need is inspiration. The man who can give that is a public benefactor.—E. L. V.

MANY BILLS AGAINST FILLED MILK

Filled milk and false advertising bills will be introduced in eighteen State legislatures this winter, according to The Holstein-Friesian Association of America. The filled milk bills prohibit the manufacture and sale of filled milk within the State, and the false advertising bills prohibit the use of dairy terms, dairy cow pictures and the names of dairy cattle breeds in the advertising of butter substitutes.

States in which the two bills will be introduced are Connecticut, Illinois, Indiana, Kansas, Maine, Massachusetts, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, South Dakota, Vermont and West Virginia. Wisconsin, Ohio and New York have enacted filled milk bills and Iowa, Michigan and Pennsylvania have enacted butter advertising bills.

Agricultural commissioners, State dairy associations and Farm Bureaus of the various States favor this legislation. The Federal Voigt bill, which has passed the House and is now in the Senate, prohibits the shipment of filled milk in inter-state commerce and forbids the manufacture and sale in the District of Columbia only.

SYRACUSE WINS DAIRY CONGRESS

The Board of Directors of the National Dairy Association received invitations from fifteen cities to hold the Dairy Show of 1923 with them, and would have been delighted to have decided upon any one of them as the place to go, but there were many things to consider, the larger things being the necessity for an Eastern location, because of the World's Dairy Congress to be held at the same time and place; next, the physical equipment for housing the Show, and last, but by no means least, the facilities for reasonably housing the people in a manner creditable to the city and to the Exposition, and then, the still greater thing than all of these—the place from where the great message for better agriculture and health and welfare of the people could be sent out from, hoping for the greatest results.

The men who urged the coming of the Show to New York State, were seemingly very much of the opinion that the men were, who, in 1916 urged the coming of the Show to New England; that the country needed it for its inspirational value for a better agriculture and better dairying; and when you take into consideration that a farm in New York State, with buildings and soil of equal merit to that of a farm in the Central West, can be purchased for less than one-half of what the same would sell for in the Central West, with the tremendous markets of the East available to the producer, there must be some reasonable work that our organization can perform to help correct this condition; and so, the National Dairy Exposition will be in the nature of a World's Dairy Show, a World's Dairy Congress, and the Conventions of the various branches of the dairy industry—all coming to Syracuse, New York, October 6 to 13, to do for that section of country just what the people of that section may be willing to take from this Exposition and Conventions.

If the leaders of agricultural endeavor in the East realize just what benefits they can secure from the teachings of this Show toward rebuilding agriculture and dignifying the calling, there will be no lack of enthusiastic support and cooperation for the success of the Show; if they do not, then no gain will be made from the trip.

We hope to make this year's Show the greatest of all Dairy Shows ever held anywhere in the world, and ask the most earnest and cordial support of all of the business and industrial and agricultural life of the East, that we may do the greater good for that section.—W. E. SKINNER.

There are now more than 10,000 De Laval Milkers in use

in the United States and Canada, and it is doubtful if any group of users of any kind of equipment is more satisfied.

This is a remarkable record in view of the fact that these milkers were introduced and sold during the worst financial depression the country has ever known—when no equipment of any kind was purchased except that which was absolutely necessary, and which would make and save money.

The De Laval Milker has proved in a striking way that it is a necessity on every farm where ten or more cows are milked, and that it will save and make enough money to pay for itself in a short time.

Many cows milked the De Laval way have made splendid records, most notable of which is Orndyke Pietertje Korndyke, owned by

Mr. R. R. Stevens of Bowmanville, Ontario, who has just recently made a world's record in the 305-day class. Owners, almost without exception, state they get more milk with a De Laval, with the same cows and feed, than with any other method of milking, either hand or machine.

More than this, some of the best certified milk today is being produced with a De Laval, proving that it is capable of producing the highest grade of milk.

The De Laval Milker has proved beyond question of doubt that it can produce more and cleaner milk, at great saving in time and labor. It increases production and cuts the cost of production. It is bound to make more profit and put more satisfaction in the dairy business. Sold on easy terms. Write for complete information.

CRAINE TRIPLE WALL SILOS

Lasting Satisfaction

You can easily tell a Craine 3-Wall Silo from any other. It is the only manufactured wood silo that has neither hoops nor lugs to hold it together.

It gives its owner lasting satisfaction. It is the cheapest silo to own. It stays put without tinkering.

Craine Silos are constructed to keep warmth and juices in; to keep cold and weather out. A strong stave silo inside is covered with thick Silafelt, and the patented, Crainelox Spiral Covering outside binds the entire structure. This forms a handsome building with every square inch of surface protected in every direction.

Any old stave, iron-hooped silo can be rebuilt into a permanent Craine 3-Wall Silo at about half the cost of a new one.

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

Water Supply Problems

Will you please give me advice what I could do to get the water up from my spring which is about 85 feet from the house and 12 feet below the level. I dug a hole 5 feet deep and stoned up like a well. There is not enough flow for a hydraulic ram.—**G. K.**, New York.

IT is a little bit hard to give the best advice in a case of this kind, because we do not know all of the local particulars. Probably the simplest thing is to install a suction pump to draw it up, operated either by windmill, gasoline engine, or electricity. A good pump ought to do this all right if the total vertical raise is only 12 feet. You can keep the pump operating for sufficient time to get the necessary supply.

Your spring seems to have a very small flow. Is there some way in which you could increase this flow so that you would have a large supply of water available. Sometimes the use of a small amount of explosive in the neighborhood of the spring will open up a strata a little so that the water-flow is increased. Of course, this has to be handled very carefully, and it might not be a desirable thing to experiment.

SIZE OF PIPE; COST OF INSTALLATION

I have a spring 100 rods away from my buildings. The spring is about 15 feet higher than the barn. What size pipe should I use in order to get water enough for 40 head of cattle. Could you give me an estimate on cost, and could this water be siphoned on this 15-foot head?—**A. B. F.**, New York.

With a spring located as you describe, you certainly have an excellent chance to get a good water supply to your buildings. The 15-foot head will give you a pressure of about six pounds, allowing for friction in the pipe, and this will be enough to distribute the water all through the buildings, provided, of course, that you do not attempt to raise it higher than the spring itself. I would recommend that you use a one-inch pipe to get the water into your barn. A smaller pipe would probably do it, but there is a chance of deposition of mineral matter in the pipe which would form a scale, thus reducing its effective diameter.

I am not quite sure just what you mean by siphoning the water on this 15-foot head. With the spring higher than the barn, there is no need of siphoning, since gravity itself will cause the water to flow directly to the

WOULD BUY Dairyman's League Certificates of Indebtedness. **BOX 64**, Chemung, N. Y.

barn. So far as the cost is concerned, I would not want to guess at this, as so much will depend on local conditions. You will have to put the pipe below ground, and, of course, get it deep enough so that it won't freeze. The spring should be protected with a concrete curb. All these things are variable in cost, and the best thing you can do is to get an estimate from your local contractor.

GOOD LAYOUT FOR POWER PLANT

I have a very desirable site on a small stream to install a water power electric plant for lights and power. What quantity of water will be required with a head of ten or twelve feet or more if necessary (ten or twelve feet can be obtained with very little expense) to operate a 1½ K. W. 110-volt generator? What kind and size wheel should be used?—**A. K.**, Ohio.

With a fall of 10 or 12 feet and anything like an adequate supply of water, it will be easy to develop plenty of power to supply electricity for all small power uses about the home. With a fall of 12 feet, allowing for some deduction on account of loss of efficiency in power transmission, you will need a flow of approximately 50 cubic feet of water per minute. Of course, the greater the fall in excess of 12 feet and the greater the flow in excess of 50 cubic feet per minute, the greater will be your power developed.

In this installation, I think a rather broad-bladed over-shot wheel would probably be the most satisfactory. As in many other cases where an installation of this size is being made, it would be very much worth while to have a water power expert look over the location. He will advise you as to the best place for putting in the dam, constructing the dam itself, arranging the wheel, power house, and the other engineering features.

To Prevent Freezing—The proper and most convenient way to prevent freezing of drinking water in winter is to empty the drinking vessel each night before dark. If the cool weather comes down too rapidly and the water in the vessel becomes frozen, a convenient method is to invert the drinking fountain and to pour a little hot water on the outside. The ice melts around the edge and the lump drops out.

Herein is a live new literature, when the man who owns the farm, lives on it and works it, shall write with direct experience and a full heart, giving us an artistic product.

Meeting Market Problems

How American Agriculturist Can Help You

A LARGE number of letters have been received from farmers in response to our editorial offering to do what we could to help farmers with their market problems. We cannot do the impossible, but we think we can help in many cases by giving you special information that is otherwise difficult to obtain. We are publishing a few of the letters here to show you the type of market help which American Agriculturist is furnishing and to give you through these letters some hints that may apply to your own problem.

What About Private Trade?

My sons have gone into the poultry business, not fancy, but for eggs and raising broilers. They are at this time getting from forty to fifty dozen white eggs daily and are getting 53c at the door this week. They had been shipping to New York for years, but there are times when the New York market is bad. Can you locate some good private trade for us? Goods are strictly fresh in every way.

We have many requests from shippers to suggest to them a "good private trade" for their eggs, but experience has taught us that unless the shipper is very close to the city where he can come in personally and establish his contacts and check up on anything that goes wrong, it is inadvisable to try to ship to private dealers. The great difficulty comes in their unreliability as to credit and the fact that such an outlet is very uncertain. Whenever private buyers can do better by buying in the wholesale market, than taking your goods, they are likely to reject it or refuse to pay you the price you think you should get, whereas if you ship to a licensed and bonded commission merchant he is required to return to you the actual amount for which your eggs sell. The commission business has been of bad repute because of the bad practices of many men in the trade, but there are some firms who would look after your interests in the best possible way.

I would advise you to study your nearby market carefully and compare prices with the net returns that you would get from shipping to a large market. If you are getting locally, 53c per dozen under present marketing conditions, you could not hope to do any better by shipping to any large market in the country.

Shipping Veal Calves

I saw a paragraph on editorial page of American Agriculturist about the service you were giving in regard to marketing problems. We are some distance from railroad station and I wish to deal with veal calves. The calf buyers that come from town pay low prices because there is not much competition. I am discouraged with the low price of calves and the high price of feeds. If I dressed the calves at home could you find a reliable market and one that pays fair prices? We would have about twenty calves per year as our dairy is not real large.

You might very well try dressing your calves at home and shipping them either to New York City or Newark. It is always advisable for a farmer to study his nearest markets and compare them with large wholesale markets in order to determine whether it is advisable for him to ship to a large market. Your nearness to New York, however, would seem to make it very safe to attempt shipping there.

Enclosed I am sending you a set of instructions for the dressing of calves. I am also sending you under separate cover a list of Licensed and Bonded Commission Merchants in New York State.

Commission receivers in New Jersey are not licensed and bonded by the State as they are in New York, but the Adam Hebler & Company have the highest financial rating of any commission merchants in Newark. If there is any further information we can get for you, please write to us.

Markets for Eggs, Pigs and Calves

Saw your notice in the American Agriculturist for better marketing. I am very much interested. We do not seem to get the right prices for sorted eggs, also have pigs and calves to market. Will you kindly send me information?

We have sent you under separate cover a list of Licensed and Bonded Commission Merchants in New York State. Before you ship to any of these firms I would suggest that you write

them directly to get shipping instructions and find out whether they wish to receive your products. It is always advisable to send notice by mail at the same time you ship.

Enclosed are instructions on the dressing of calves. In dressing small pigs be sure to turn their feet up and put skivers in. Leave the head on and the hearts and livers in, and wrap in heavy parchment paper. The Health Department of the City of New York has to inspect any dressed meats received here before they are sold, and a nominal fee of 40 or 50c is charged for this inspection to the shipper.

We are also sending a copy of the Daily Market Report issued by the State Department of Farms and Markets which you can obtain without cost on application to that Department at 90 West Broadway, New York City. If you will write us more specific information as to the quantities and kind of produce you have to market, we will be glad to give you all the help we can in marketing them profitably.

A Plan for Small Egg Shippers

I am much interested in your Market Service plan. We farmers out here have a good deal of trouble disposing of our eggs, most of our stores will not accept them in trade for groceries. So we are somewhat baffled to know just how to dispose of them at any advantage. Most of us have not enough hens to ship a crate a week. Could you suggest us a plan whereby four of us could cooperate to ship a crate or more each week from our neighborhood. Please send me egg prices on whites and browns and mixed eggs. Please inform me on rates for shipping and the best place to get crates and what they cost and how long would it take to get returns, shipped from Oakwood, Cayuga County, N. Y. to New York?

We would suggest that you and your neighbors assemble your eggs once or twice a week and sort them up very carefully as to size and color of shell, also candle them and grade them according to freshness. You ought really to ship twice a week in order to get your eggs to market in the best condition. You can obtain from Cornell University, Department of Publications, the bulletin "How to Candle Eggs" and also the bulletin on marketing eggs. It would not be necessary for you to go through any special formality in organizing to ship cooperatively as long as there are only a few of you who know each other very well, and you can handle the business without a great deal of time and trouble.

It would be advisable, however, that those of you who agree to ship together draw up a definite written agreement and sign it, covering just what you propose to do, and agreeing to abide by the decision of the person designated to do the candling or packing or by the majority of you as to the grading of your eggs. With each lot of eggs that you receive and pack, you give the individual producer a receipt for the number of eggs of each different grade that he delivers. Then when you get your returns from the market you can divide up those returns according to the number of eggs of each kind delivered by each poultryman. If one person looks after the packing and shipping of the eggs he should be paid a nominal amount to cover the time required. Usually cooperative endeavors fail if they depend upon voluntary service. It ought to be possible for you to do this however at a very small cost per dozen.

It would be a good idea to demand of the firm that handles your eggs in the market, definite criticism as to how you can improve the quality. New York is the finest market in the country for fancy eggs, but it is often oversupplied with ordinary grades.

Your express rate per case of eggs from Oakwood to New York City is approximately 75c.

When Packing Eggs in Cases

It has been the experience of shippers that NEWSPAPERS SHOULD NOT BE USED IN PLACE OF FLATS OR AS PADS. It pays to buy new flats and fillers and new clean excelsior pads. If you do not know where to get them, write the Market Department, American Agriculturist.

After 30 Days Free Trial
\$7.50

The Belgian Melotte Separator — with the wonderful Self-Balancing Bowl. No other like it.

30 days' free trial — then, if satisfied, only \$7.50 and a few easy payments — AND — the wonderful Belgian Melotte Separator is YOURS.

No Money Down!

Catalog tells all — write. **Caution!** U. S. Bulletin 201 shows that vibration of the bowl causes cream waste! The Melotte bowl is self-balancing. Positively cannot get out of balance therefore cannot vibrate. Can't remix cream with milk. The Melotte has won 24 Grand and International Prizes.

Catalog FREE

Write for new Melotte catalog containing full description of this wonderful cream separator and the story of M. Jules Melotte, its inventor. Don't buy any separator until you have found out all you can about the Melotte and details of our 15-year guarantee which is infinitely stronger than any separator guarantee. Write TODAY.

Runs so easily, bowl spins 25 minutes after you stop cranking unless you apply brake. No other separator needs a brake. Bowl chamber is porcelain lined.

The Melotte Separator. H. B. Babson, U.S. Mgr., Dept. 9062, 2643 W. 19th Street, Chicago, Ill.

GLOBE SILOS

Give Lasting Satisfaction

The GLOBE Silo with its exclusive extension roof enables more silage to be stored than in any other similar sized silo. Adjustable door frame provides against swelling or shrinking. Patent fastener on each door becomes the rung of a convenient ladder. Adjustable hoops together with adjustable door frame make the GLOBE Silo absolutely air-tight—there is no waste or spoilage.

Only carefully selected Oregon fir and Canadian spruce are used in Globe Silos. All metal parts are made from finest steel and Globe Silos give perfect satisfaction for a generation or more. They are the result of 50 years' practical experience.

Prices: \$3.00 per ton capacity and up, according to size.

Send for our catalog. Also ask for agency proposition.

The Valley of the Giants—By Peter B. Kyne

BRYCE laughed. "Pal," he declared, "if you and I have any brains, they must roll around in our skulls like buckshot in a tin pan. Here we've been sitting for three months, or lying awake nights trying to scheme a way out of our difficulties, when if we'd had any sense we would have solved the problem long ago. Listen, now! When Bill Henderson wanted to build the logging railroad which he afterward sold to Pennington, and which Pennington is now using as a club, did he have the money to build it?"

"No."

"Where did he get it?"

"I loaned it to him. He only had about eight miles of road to build then, so I could afford to accommodate him."

"How did he pay you back?"

"Why, he gave me a ten-year contract for hauling our logs at a dollar and a half a thousand feet, and I merely credited his account with the amount of the freight-bills he sent me until he'd squared up the loan, principal and interest."

"Well, if Bill Henderson financed himself on that plan, why didn't we think of using it for financing a road to parallel Pennington's?"

John Cardigan sat up with a jerk. "By thunder! I never thought of that!"

"All right, John Cardigan, continue to listen: to the north of that great block of timber held by you and Pennington lie the redwood holdings of the Trinidad Redwood Timber Company."

"Never heard of them before."

"Well, timber away in there in back of beyond has never been well advertised, because it is regarded as practically inaccessible. By extending his logging-road and adding to his rolling-stock, Pennington could make it accessible, but he will not. He figures on buying it cheap when he gets around to it, for the reason that the Trinidad Company cannot possibly mill its timber until a railroad connects its holdings with the outside world."

"I wonder why the blamed fools ever bought in there, Bryce."

"When they bought, it looked like a good buy. You will remember that some ten years ago a company was incorporated with the idea of building a railroad from Grant's Pass, Oregon, on the line of the Southern Pacific, down the Oregon and California coast to tap the redwood belt."

"I remember. There was a big whoop and hurrah and then the engineers found that the cost of construction was prohibitive."

"Well, before the project died, Gregory and his associates believed in it. They decided to climb in on the ground floor, so they quietly gathered together thirty thousand acres of good stuff and then sat down to wait for the railroad. And they are still waiting. Gregory, by the way, is the president of the Trinidad Redwood Timber Company. He's an Edinburgh man, and the fly American promoters got him to put up the price of the timber and then mortgaged their interests to him as security for the advance. He foreclosed on their notes five years ago."

"And there he is with his useless timber!" John Cardigan murmured thoughtfully. "The poor Scotch sucker!"

"He isn't poor. The purchase of that timber didn't even dent his bank-roll. But he would like to sell his timber, and being Scotch, naturally he desires to sell it at a profit. In order to create a market for it, however, he has to have an outlet to that market. We supply the outlet—with his help; and what happens? Why, timber that cost him fifty and seventy-five cents per thousand feet stumpage—will be worth two dollars and fifty cents—perhaps more."

THE elder Cardigan bent his sightless gaze upon his son. "Well, well," he cried impatiently.

"He loans us the money to build our road. We build it—through our timber and into his. We put up a twenty-five-years contract to haul his logs to tidewater at a base freight-rate of one dollar and fifty cents, with an increase of twenty-five cents per thousand every five years thereafter, and an option for a renewal. We also grant him perpetual booming-space for his logs in the slough which we own. In addition we sell him, reasonably, sufficient land fronting on tidewater to enable him to erect a sawmill, lay out his yards, and build a dock out into the deep water."

"Thus Gregory will have an outlet to his market by water; and when the railroad to Sequoia builds in from the south, it will connect with the road which we have built from Sequoia up into Township Nine to the north; hence Gregory will also have an outlet to his market by rail."

"Have you talked with Gregory?"

"Yes. I met him while I was in San Francisco. Somebody brought him up

to a meeting of the Redwood Lumber Manufacturers' Association, and I pounced on him like an owl on a mouse."

John Cardigan's old hand came gropingly forth and rested affectionately upon his boy's. "What a wonderful scheme it would have been a year ago," he murmured sadly. "You forget, my son, that we cannot last in business long enough to get that road built, even though Gregory should agree to finance the building. The interest on our bonded indebtedness is payable on the first—"

"We can meet it, sir."

"Aye, but we can't meet the fifty thousand dollars which we are required to pay in on July first of each year toward the retirement of our bonds. By super-human efforts, we managed to meet half of it this year and procure an extension of six months on the balance due."

"THAT is Pennington's way. He plays with us as a cat does with a mouse. And now, when we are deeper in debt than ever, when the market is more sluggish than it has been in fifteen years, to hope to meet the interest and the next payment taxes my optimism. Bryce, it just can't be done. We'd have our road about half completed when we'd bust; indeed, the minute Pennington suspected we were paralleling his line, he'd choke off our wind."

But Bryce contradicted him earnestly. "It can be done," he said. "Gregory knows our rating in the reports of the commercial agencies is a good as it ever was, and a man's never broke till somebody finds it out."

"What do you mean?"

"If we can start building our road and have it half completed before Pennington jumps on us, Gregory will simply have to come to our aid in self-defense. Once he ties up with us, he's committed to the task of seeing us through."

John Cardigan raised his hand. "No," he said firmly, "I will not allow you to do this. That way—that is the Pennington method. We will not take advantage of this man Gregory's faith. If he joins forces with us, we lay our hand on the table and let him look."

"Then he'll never join hands with us, partner. We're done."

"We're not done, my son. We have one alternative, and I'm going to take it. Your mother would have wished it so."

"You don't mean—"

"Yes, I do. I'm going to sell Pennington my Valley of the Giants. It is my personal property, and it is not mortgaged. Pennington can never foreclose on it—and until he gets it, twenty-five hundred acres of virgin timber on Squaw Creek are valueless—nay, a source of expense to him. Bryce, he'll pay the price, when he knows I mean business."

With a gesture he waved aside argument. "Lead me to the telephone," he commanded; and Bryce, recognizing his unalterable determination, obeyed.

His father proceeded to get the Colonel on the wire. "Pennington," he said hoarsely, "this is John Cardigan speaking. I've decided to sell you that quarter-section that blocks your timber on Squaw Creek."

"Indeed," the Colonel purred. "I had

an idea you were going to present it to the city for a natural park."

"I've changed my mind. I've decided to sell at your last offer."

"I've changed my mind, too. I've decided not to buy—at my last offer. Good-night."

Slowly John Cardigan hung the receiver on the hook, turned and groped for his son. "Lead me upstairs, son," he murmured presently. "I'm tired. I'm going to bed."

WHEN Colonel Seth Pennington turned from the telephone and faced his niece, Shirley read his triumph in his face. "Old Cardigan has capitulated at last," he cried exultingly. "We've played a waiting game and I've won; he just telephoned to say he'd accept my last offer for his Valley of the Giants."

"But you're not going to buy it. You told him so, Uncle Seth."

"Of course I'm not going to buy it—at my last offer. It's worth five thousand dollars in the open market, and once I offered him fifty thousand for it. Now I'll give him five."

"I wonder why he wants to sell," Shirley mused. "From what Bryce Cardigan told me once, his father attaches a sentimental value to that strip of woods."

"He's selling because he's desperate," Pennington replied gayly. "I'll say this for the old fellow: he's no bluffer. However, since I know his financial condition almost to a dollar, I do not think it would be good business to buy his Valley of the Giants now. I'll wait until he has gone busted—and save twenty-five or thirty thousand dollars."

"I think you're biting off your nose to spite your face, Uncle Seth. The Laguna Grande Lumber Company needs that outlet. In dollars and cents, what is it worth to the Company?"

"If I thought I couldn't get it from Cardigan a few months from now, I'd go as high as a hundred thousand for it to-night," he answered coolly.

"In that event, I advise you to take it for fifty thousand. It's terribly hard on old Mr. Cardigan to have to sell it, even at that price."

"You do not understand these matters, Shirley. Don't try. And don't waste your sympathy on that old humbug. He has to dig up fifty thousand dollars to pay on his bonded indebtedness, and he's finding it a difficult job. He's just sparring for time, but he'll lose out."

AS if to indicate that he considered the matter closed, the Colonel drew his chair toward the fire, and picked up a magazine. Shirley studied the back of his head for some time, then got out some fancy work. And as she plied her needle, a thought gradually took form in her head until eventually she murmured loud enough for the Colonel to hear:

"I'll do it."

"Do what?" Pennington queried.

"Something nice for somebody who did something nice for me," she answered.

"That McTavish girl?" he suggested.

"Poor Moira! Isn't she sweet, Uncle Seth? I'm going to give her that black suit of mine. I've scarcely worn it—"

"I thought so," he interrupted with an indulgent yawn. "Well, do whatever makes for your happiness, my dear. That's all money is for."

About two o'clock the following after-

noon old Judge Moore, of the Superior Court of Humboldt County, drifted into Bryce Cardigan's office, sat down uninvited, and lifted his long legs to the top of an adjacent chair.

"Well, Bryce, my boy," he began, "a little bird tells me your daddy is considering the sale of Cardigan's Redwoods. How about it?"

Bryce stared at him a moment questioningly. "Yes, Judge," he replied, "we'll sell, if we get our price."

"Well," his visitor drawled, "I have a client who might be persuaded. I'm here to talk turkey. What's your price?"

"Before we talk price," Bryce parried, "I want you to answer a question."

"Let her fly," said Judge Moore.

"Are you, directly or indirectly, acting for Colonel Pennington?"

"That's none of your business, young man—at least, it would be none of your business if I were, directly or indirectly, acting for that unconvicted thief. To the best of my information and belief, Colonel Pennington doesn't figure in this deal in any way, shape, or manner; and as you know, I've been your daddy's friend for thirty years."

BRYCE would have staked his honor on the Judge's veracity, but nobody knew better than he in what devious ways the Colonel worked.

"Well," he said, "your query is rather sudden, Judge, but still I can name you a price. I will state frankly, however, that I believe it to be over your head. We have several times refused to sell to Colonel Pennington for a hundred thousand dollars."

"Naturally that little dab of timber is worth more to Pennington than to anybody else. However, my client has given me instructions to go as high as a hundred thousand if necessary."

"What!"

"I said it. One hundred thousand dollars of the present standard weight and fineness."

Judge Moore's last statement swept away Bryce's suspicions. He required now no further evidence that the client could not possibly be Colonel Seth Pennington or any one acting for him. For a moment Bryce stared stupidly at his visitor. Then he recovered his wits.

"Sold!" he almost shouted, and extended his hand to clinch the bargain. The Judge shook it solemnly. "The Lord loveth a quick trader," he declared, and reached into the capacious breast pocket of his Prince Albert coat. "Here's the deed already made out in favor of myself, as trustee."

"Client's a bit modest, I take it," Bryce suggested.

"Oh, very. Of course I'm only hazarding a guess, but that guess is that my client can afford the gamble and is figuring on giving Pennington a pain. In plain English, I believe the Colonel is in for a razzooing at the hands of somebody with a small grouch against him."

"May the Lord strengthen that somebody's arm," Bryce breathed fervently. "If your client can afford to hold out long enough, he'll be able to buy Pennington's Squaw Creek timber at a bargain."

"My understanding is that such is the programme."

Bryce reached for the deed, then for his hat. "If you'll be good enough to wait here, Judge Moore, I'll run up to

(Continued on page 127)

WHAT HAS HAPPENED IN "THE VALLEY OF THE GIANTS"

"I'M just naturally stubborn" said Bryce Cardigan cheerfully.

He found his father, lumber pioneer, blind and almost penniless. He took on old Cardigan's fight against Colonel Seth Pennington, unscrupulous Eastern operator.

He made friends with Shirley Sumner, the Colonel's niece, and declared his love during a free-for-all fight in Pennington's woods. After whipping her uncle's woods-boss for cutting down a tree in the Valley of the Giants, his father's grove of redwoods, he saved Shirley and the Colonel from a run-away train and then calmly told them he expected to fight them both for supremacy.

He fired old McTavish, his father's drunken woods-boss and installed Moira, his beautiful daughter, in the company office. And he is now discussing with old Cardigan how he can hide the fact that he is behind the building of the new logging railroad to parallel Pennington's and open up inaccessible timber property.

A School Holiday Program

Simple Patriotic Exercises for Children

SINCE Washington and Lincoln's Birthdays come so close together, one New York State school took a Friday afternoon midway between the two events to present a patriotic program bearing on the lives of both great Americans. The program, a selection of short scenes, recitations, music and drills, cost practically nothing to put on, and gave every child in the school an opportunity to take part. It was staged on a platform without a curtain or scenery.

The course of events were as follows:

1. Singing of America. Whole School.

2. Tableau—Betsy Ross and Flag Makers. Posed from the familiar picture, by a group of girls. And at the same time:

3. Recitation—Flag Day Address—boy. (From Patriotic Pieces from the Great War. Penn Publishing Company, Philadelphia, Pa., 36 cents.)

4. Salute to the Flag—Whole School.

5. "George Washington's Fortune" (Patriotic Plays and Pageants, by Constance D'Arcy Mackay. Henry Holt, 19 West 44th St., \$1.35.)

6. "Three Cheers for the Red, White and Blue." Whole School.

7. "Scenes from the Time of Lincoln." ("Little Plays from American History. A. J. Walker, Holt, \$1.10. Four scenes, of which any one may be used separately; scene 2, has 1 woman and 2 little girls; scene 3, is good for a boy's class, taking 12 and 1 woman.)

8. Gettysburg Address—recitation for a boy.

9. Song of Civil War days—"Marching Through Georgia," or "Tenting on the Old Camp Ground."

10. Red Cross Drill—(Penn Publishing Company) for a leader and sixteen girls.

11. Star Spangled Banner. Whole school

In scenes requiring a cast, the participants assembled in the hall and marched in as their turn came. A screen between the door and the platform hid the entrances and exits for the little scenes.

For the George Washington scene, the necessary costumes were all provided by the actors, with the help of

soil. She will not have any trouble about their growing.

Butternuts, walnuts and so forth should be planted where wanted, but all must be put in the ground before drying. I find no more trouble to grow them in this way than any other seeds.

Also in growing apple trees from the seeds, do not let the seed become dry, but plant as soon as the apple is cut. I have several apple trees now three years old which I started in with house plants.—Lizzie M. Rightmire, Wellsburg, N. Y.

The Valley of the Giants

(Continued from page 126)

the house—and get my father to sign this deed."

A quarter of an hour later he returned with the deed duly signed, whereupon the Judge carelessly tossed his certified check for a hundred thousand dollars on Bryce's desk and departed whistling "Turkey in the Straw." Bryce reached for the telephone and called up Colonel Pennington.

"Bryce Cardigan speaking," he began, but the Colonel cut him short.

"My dear, impulsive young friend," he interrupted, "how often do you have to be told that I am not quite ready to buy that quarter-section?"

"Oh," Bryce retorted, "I merely called up to tell you that every dollar and every asset you have in the world, including your heart's blood, isn't sufficient to buy the Valley of the Giants from us now."

"Eh? What's that? Why?"

"Because, my dear, overcautious, and thoroughly unprincipled enemy, it was sold five minutes ago for the tidy sum of one hundred thousand dollars, and if you don't believe me, come over to my office and I'll let you feast your eyes on the certified check."

He could hear a distinct gasp. After an interval of five seconds, however, the Colonel recovered his poise. "I congratulate you," he purred. "I suppose I'll have to wait a little longer now, won't I? Well—patience is my middle name. *Au revoir.*"

The Colonel hung up. His hard face was ashen with rage, and he stared at

IN THE PEANUT FIELDS

MILDRED STRIBLING RIBBLE

WHEN twilight brings the starlight, and all the world is still
The little Peanut People go trooping o'er the hill;
I think, perhaps, they're hand in hand, I know they're two by two,—
But isn't that the very way that other people do?

November frowns above them, but they do not heed her frown,
These little Peanut People in their sober coats of brown;
And so across the yellow fields they trot to take the view,—
(I never call them peanut shocks,—I call them Folks, don't you?)

teacher or parents. Gymnasium bloomers, stocks and three-cornered hats gave the effect for the boys, while the girls wore modified Colonial styles, as directed in the play.

"Half an Hour with Washington," (Walter Baker, 5 Hamilton Pl. Boston, Mass., 16 cents,) is greatly inferior in context to the Mackay scene, but is perhaps easier to give. Washington himself visits a school, and any number may take part. Or the Washington material may be entirely omitted and "The Birth of a Nation's Flag," a playlet requiring 13 girls and 6 boys presented. (Walter Baker, 16 cents.)

If the school has a piano or if a phonograph can be borrowed, a little music while changing from one scene to another shortens the waits between numbers.—HANNAH PAINE.

IN PLANTING FRUIT PITS

Tell your reader who wishes to grow peaches, plums or cherries from the fruit pits to place the pits while fresh in a small hole in the ground, cover lightly with dirt, place over them a flat stone, leave them until spring, and then crack carefully those not already cracked by the frost and plant the meats carefully in a row in good fresh

a calendar on the wall with his cold, phidian stare. However, he was not without a generous stock of optimism. "Somebody has learned of the low state of the Cardigan fortune," he mused, "and taken advantage of it. They're figuring on selling to me at a neat profit. And I certainly did overplay my hand last night. However, there's nothing to do now except sit tight and wait for the new owner's next move."

Meanwhile, in the general office of the Cardigan Redwood Lumber Company, joy was rampant. Bryce Cardigan was doing a buck and wing dance around the room, while Moira McTavish watched him, in her eyes a tremendous joy and a sweet, yearning glow of adoration that Bryce was too happy and excited to notice.

Suddenly he paused before her. "Moira, you're a lucky girl," he declared. "I thought this morning you were going back to a kitchen in a logging-camp. It almost broke my heart to think of fate's swindling you like that." He put his arm around her and gave her a brotherly hug. "It's autumn in the woods, Moira, and all the underbrush is golden."

She smiled, though it was winter in her heart.

Clothes for Miss Six-to-Sixteen

Early Spring Styles Suit All Ages and Tastes—New Catalogue Ready

EVERY mother likes to have her daughter prettily dressed, and probably most mothers would rather make things for Miss Six-to-Sixteen than for themselves.

No. 1551 is the most useful sort of model. It has good lines for the growing girl and mother will find it "lets out" admirably. In sizes 8, 10, 12, 14 and 16 years. Size 8 requires 2 yards 36-inch material with ½ yard 36-inch contrasting. Price, 12c.

A sensible middy blouse for school and play wear may be made of madras or any heavy cotton material. No. 1542 comes in sizes 34, 36, 38, 40 and 42-inches bust measure. Size 36 requires 2½ yards 36-inch material with ½ yard 36-inch

the men have several pages of their own. Dressmaking lessons, photographs of finished costumes and embroidery designs are all included in this comprehensive book of fashions.

And all this for only ten cents! No home dressmaker should attempt to plan even one garment of her wardrobe without it. Send ten cents to-day (preferably in stamps) to the Pattern Department, American Agriculturist, 461 4th Avenue, New York City.

contrasting and 4¾ yards braid. Price 12c.

A cunning dress for the smaller girl, and one suitable for almost any material, is No. 1563, which may be brightened by a touch of embroidery. No. 1563 comes in sizes 4, 6, 8 and 10 years. Size 8 requires 1½ yards 36-inch material with 2 yards binding. Price 12c. Transfer Pattern No. 626 in blue only, 12c extra.

TO ORDER: Write your name and address plainly, enclose 12c in stamps for each pattern ordered and send your order to Fashion Department.

and send your order to Fashion Department.

ABOUT OUR NEW CATALOGUE

The wise home dressmaker doesn't choose her patterns at random. She thinks over her needs well in advance, studies a good pattern catalogue and then sends for enough designs to see her through the entire bout of spring sewing.

Our spring catalogue is ready. The styles are new and smart; every one is easy to make and full directions are given on each pattern. Then, too, many of the designs are so adaptable that not

one, but several dresses can be made from the same pattern. There are 300 and more styles, ranging from a layette for the Better Baby, up through the children's pattern to those for grown-up members of the family. Even

the men have several pages of their own. Dressmaking lessons, photographs of finished costumes and embroidery designs are all included in this comprehensive book of fashions.

And all this for only ten cents! No home dressmaker should attempt to plan even one garment of her wardrobe without it. Send ten cents to-day (preferably in stamps) to the Pattern Department, American Agriculturist, 461 4th Avenue, New York City.

KEEPING CHILDREN BUSY

ELIZABETH RADWAY

It does not always take expensive playthings to keep children amused and happy. They will play for hours with a bowl of thorn apples and a handful of toothpicks. They can make many different queer animals and fantastic objects of whirligigs with them.

Then there is paraffine. A lump of that as large as an egg and warmed so that it is pliable will amuse many children. They can model animals or birds or make marbles with it. They can model fruit or furniture. Paraffine which has been used on fruit or jelly will do just as well as new.

In season, horse chestnuts, gathered and stored and brought forth as a surprise, will work wonders with a child who doesn't know what to do. They can be rolled on the floor, poured from dish to dish to hear the rattle, or hidden by mother and found by the youngsters.

A box of cards, saved from time to time, is a good thing to amuse most children. These cards can be cut from raisin boxes, coconut boxes, butter cartons and everywhere a bright, pretty picture is found that would otherwise be wasted.

Last, but not least, there is helping mother or father. Many steps can be saved the parent by the child and all small children, if asked and thanked, like to carry kindling-wood and chips or to do other small chores.

HEART-SHAPED COOKIES FOR VALENTINE'S DAY

For these cookies you may use your favorite cookie recipe, or the following:

Sour Cream Cookies

One-half cupful butter, ½ cupful sour cream, 1 cupful sugar, ¼ teaspoonful soda, 1 tablespoonful baking powder, ½ teaspoonful salt, ½ teaspoon vanilla, 1 egg, red sugar to sprinkle tops.

Cream—the butter, add the sugar gradually, the well-beaten egg and the vanilla. The flour, mixed and sifted with the baking powder and salt, is added alternately with the sour cream in which the soda has been dissolved. Roll the dough thinly and cut with a

heart-shaped cutter. If you have no cutter of this shape make a paper pattern a little larger than you wish the cookies to be, as the dough shrinks in baking. Place this on your dough and cut around the pattern with a pointed knife, repeating until the dough is used. Sprinkle each cookie with red sugar and place in a pan lightly dredged with flour to bake until the cut edges are a delicate brown. To color sugar use the coarse granulated kind. Pour a few drops of red color—cochineal, or the coal-tar dye that is bought at the stores—on the sugar, rubbing with a spoon until evenly colored. Dry with a very moderate heat. These novel cookies are much admired at a Valentine tea or party, and a box of them in a gay box or basket is a welcomed gift.—ETTA BOIES RANKIN.

NUTS GOOD AND CHEAP FOOD

Nuts are valuable food, say the specialists at the School of Home Economics at Cornell. They are cheap when it is considered that they are a concentrated food, high in protein and fat, and a valuable source of energy.

Contrary to the usual idea, nuts are easily and fairly completely digested if well masticated and eaten as a part of the regular meal, not after or between complete meals.

Most nuts are edible raw, except the chestnut, which contains so much starch that cooking is desirable. The flavor of almonds and peanuts is improved by roasting.

On account of their high protein value, nuts may be used as the main dish. A salad may be made a principal dish by the addition of nuts.

Peanut loaf is a satisfactory meat substitute. A recipe follows: 1 cup ground peanuts, 1 cup bread crumbs, 2 cups boiled rice, ½ cup tomatoes, 1 egg, 2 tablespoons chopped onion, salt, pepper, mix, mold into a loaf, and bake 30 minutes.

I received the dress and bathrobe, and am very much pleased with them, so I am going to order two more bathrobes. I hope these will be just as pretty as the one I just received.—Mrs. C. G., New Jersey.

Old Time Favorite Songs

\$2.98 For All

Eight Double-Disc Full Size 10 Inch Records

Here are the songs that never grow old—the favorites you remember as long as you live, ballads that touch every heart. Just the music that should be in EVERY HOME. The Care of the Feet

Our Medical Editor Gives Expert Advice

AT this season of the year the feet take on an added importance because of the rôle they play when not properly protected, in bringing about colds and influenzal troubles, to say nothing of pneumonia.

The circulation throughout the lower extremities must be maintained with suitable, warm, dry footwear and exercise; this must be your first consideration, otherwise the lack of warm blood circulating freely through the parts directly results in cold feet.

Footwear is an item of clothing rarely regarded with the respect due it. When the feet and ankles are kept warm and dry, withal comfortable, cold has no terrors. Everyone can best judge for himself the most suitable kind of hose. Some of you take great comfort in home-made woolen hose, while others are irritated and annoyed by them. However, as long as stock-

When the feet have been exposed for any length of time to severe cold and dampness, a possible chill can be averted with a hot mustard footbath. Many severe troubles are the direct results of improperly fitting footwear. I have written volumes on this subject, and yet my readers will wear any kind of a shoe that happens to be handy! Children are forced to wear adults' shoes in many instances, to my knowledge, and many women work in the fields, with men's shoes on for hours.

The feet are the most patient, long-suffering, willing members of the body and possibly the most abused. Have you ever stopped to consider how much more efficient you would be and how much better you would feel if you gave your feet the consideration they merit?

From the feet to the brain and spirit is a far cry, yet the intimate connection

INTRODUCING DR. CHARLOTTE C. WEST

American Agriculturist is fortunate to have secured as consulting physician Charlotte C. West, whose skillful and friendly handling of medical questions by mail has made her one of the best-known women doctors in the country.

Dr. West will contribute a monthly article; she will also answer readers' letters, giving any possible advice that can safely be attempted by mail. There is no charge for this service, but readers are asked to enclose a stamped, self-addressed envelope in asking her help.

Address letters to Dr. Charlotte C. West, care of American Agriculturist, 461 Fourth Avenue, N. Y. C.

ings are protective; and heavy-soled shoes are worn, the actual quality is not specially important.

Many of my readers suffer from cold hands and feet in winter, and usually disregard the conditions. Nothing is more foolhardy. There would be fewer cases of severe illness if these little warnings of nature were looked into. Cold extremities are, as a rule, caused by impoverishment of the blood, plus feeble circulation. That sounds like anemia, does it not?

And it is very true that almost everyone troubled with cold hands and feet is anemic. Not everyone, as the condition is sometimes wholly a nervous one, but then it is not constant, it comes and goes, whereas, the condition to which I particularly refer is more or less permanent. Even when of nervous origin the blood lacks the spark.

Speaking of cold feet and anemia compels me to say a word to those of you who dislike cold weather and hug the fireside in consequence. I assure you it is a bad combination, because the carbon dioxide gas from coal fires vitiates the atmosphere and further impoverishes the blood. It also invites other troubles, which I shall not enter into here.

You can improve and entirely overcome this condition by breathing fresh, pure air all the time, by exercising and including in your diet such foods as increase the warmth of the body; namely, olive oil, pork, an abundance of milk, rare beef, butter, whole wheat flours.

Coldness of the feet which persists for hours after coming indoors, requires local treatment. You should never retire when the extremities are so chilled that hours of wakefulness result. Plunge the feet alternately into cold, then hot water, and dry briskly with a Turkish towel until the skin tingles.

Before retiring, rub them briskly with oil or spirits of turpentine, which imparts warmth and is likewise conducive to sleep. After the turpentine rub, the feet and ankles may be wrapped in a woolen garment to retain the heat and the turpentine fumes.

Simple treatment, is it not? But highly effective, as you can prove by trying it. Those susceptible to colds should take every precaution against them, for repeated attacks of coryza (cold in the head) and of bronchial coughs are the forerunners of more serious troubles.

Damp clothing, especially damp shoes and stockings, should always be removed immediately on entering the house, and the feet dried briskly with coarse towels, before getting into dry shoes and stockings.

between them is so true that in case of weary, fatigued feet and those crippled with slight deformities, the brain is apt to be sluggish and the spirits depressed. It is impossible to maintain proper bodily pose if the feet are not correct anatomically; if, in other words, they are not properly shod. Broken-down arches, weak ankles, hammer toes, joint deformities and such lesser evils as corns, bunions, etc., all result from faulty footwear, and all create so much physical pain that mental anguish is a foregone conclusion.

I will have more to say on all these matters in future articles, but cannot close this one without a reference to frost-bite and chilblains, so common at this season of the year. Contrary to popular belief, chilblains are much more apt to occur when the weather is penetratingly damp and chilly, than when it is severely cold but dry. Of course, prolonged exposure to zero weather often results in frost-bite.

A person suffering from this trouble should never be taken close to a fire, steam radiator or heating apparatus of any kind. For mild conditions of frost-bite plunge the affected member in warm water. Friction with oil of turpentine or camphorated vaseline is good. It is most important to reestablish the circulation with all possible speed to counteract the effect of cold, so that serious chilblains—which mean destruction of the affected tissues—will not result.

When the condition has developed, the following is a good liniment:

Soap liniment..... 2 ounces
Spirits of camphor..... 2 ounces
Tincture of cantharides. 2 ounces

Saturate lint with this mixture, and bind on the parts.—(DR. CHARLOTTE C. WEST.)

CURING OF MEATS

I. D. W. ALLEN

Of all the recipes that I have used in curing meats, I like the following best, because of the ease with which it can be done, and the fine rich flavor that it gives. We treat our hams and bacon the same way. To a cupful of salt, add a teaspoonful of finely pulverized saltpeter and dampen the whole thoroughly with heavy, dark New Orleans molasses. After the meat has cooled and ripened for a few days, rub all the above mixture into the meat that is possible. Let stand for a few days, or until the salt is all absorbed, and then repeat with the same mixture. After four or five days, smoke with corn cobs and you will have sweet, rich meat.

Reviewing the Latest Eastern Markets

CAR SHORTAGE HELPS POTATO MARKET

POTATOES were in demand early last week due to car shortage. This condition was quickly corrected and the market turned decidedly weaker.

"States" sold in the railroad yards from the cars at \$2 @ 2.25 per 150-lb. sack depending on quality. Shippers were offering bulk at \$1.30 @ 1.40 cwt. delivered New York.

"Long Islands" continued firm. Farmers on North Side were hauling for from 80 @ 85c per bushel; on the South Side from 90 @ 95c, a few \$1.

ONION MARKET QUIET

Receipts of onions from State sections are of poor quality and the market tends lower, temporarily at least. Demand is more quiet. New York State shipments to date are far below last year to same date. Ohio and Indiana have shipped over twice as much as last year. Central and Western N. Y., yellow, No. 1 best sold at \$2.65 @ 2.75 per

prompt sale for best qualities. No improvement in market for ordinary stock.

Wholesale prices per barrel A grade 2½-inch, were as follows:

VARIETY	Best	Fancy	Ordinary
Baldwins	\$4.50@4.75	\$5	\$4 @4.25
Greenings	4.50@4.75	5	4 @4.25
McIntosh	8 @9	9.50@11	6.50@7.50
N. Spy	6 @6.50	4.50@5.50

EGG MARKET BREAKS AGAIN

The mild weather and increasing receipts caused wholesale egg prices to drop sharply again last week. The top quotation on New Jersey hennerly whites uncandled, extras February 1, was 48 @ 50c compared with 55 @ 57c a week previous. Other nearby hennerly white extras, were down to 47c, as compared with 52 @ 53c the week previous. Nearby gathered whites shipped by country collectors ranged from 43 @ 46c, compared with 47 @ 51c a week before. Pullets are improving in quality and have declined less.

The express shipments from nearby sections continue to show a wide va-

Turkeys are selling well at steady prices. There are few nearby dressed chickens in the market, but receipts are heavy from the West. Fowls in moderate supply and market steady.

BUTTER CONTINUES TO DECLINE

Wholesale quotations on all grades of butter at New York continued to decline, showing a total drop of 2½c in the week ending February 1. The outlet has been too slow to absorb excessive supplies of fresh goods.

Stocks on hand in the wholesale market caused buyers to hold off and prices to drop. Retail prices have not come down sufficiently to increase consumption. Most of the big chain stores are now retailing fine quality creamery butter at 55 @ 57c, but smaller grocers and delicatessen shops charge considerably more. Wholesale prices are still about 9 cents higher than a year ago. There is comparatively little storage stock to fall back on, but the production of fresh butter is larger.

The outlook for cheese is for a gradual decline. Average run, whole milk flats, held, sold at 28 @ 28½c lb.

HAY INVOICES LIGHTER

Although the 33rd Street market was flooded with hay shipments last week, it is reported that invoices are lighter. No permits for shipments here are being issued by the New York Central yet. Brooklyn terminals have been no better than Manhattan, but are beginning to clean up. Firm outlook for rye straw. A boat shipment of California alfalfa is reported on the way here.

DRESSED CALVES IN DEMAND

In spite of heavy receipts the market for country dressed calves held steady last week, because of active demand. On February 1, best country dressed calves sold at 20 @ 21c, lower grades 14 @ 19c. Hot-house lambs brought \$14 @ 15 each. Practically no country dressed pigs or beef coming now, owing to difficulty of complying with City Health Department regulations. The demand for hot-house lambs is strong, but very slow for dressed pigs.

LIVE STOCK LOWER EXCEPT LAMBS

Live calves, steers, bulls and cows were in heavy receipt last week and prices tended a little lower. Lambs, however, held steady with a strong demand at \$15.50 per cwt. for primes. Most of the lambs now are coming from the West, the New York season being about over. On February 1, top price on calves was around 15c per lb., on steers, 9c per lb., bulls, common to good, \$2.50 @ 3.95 per cwt.; cows, a few choice at \$5.20 per cwt., common \$1.50. Receipts of cows and bulls were especially heavy.

MILL FEEDS AND OIL MEAL LOWER

Oil meal in the Buffalo market declined another 50c per ton last week and, cottonseed meal, 43 per cent dropped 25c. Bran and spring middlings were \$1 ton lower and choice flour middlings 50c lower. White hominy also dropped \$1 per ton.

Quotations at Buffalo, carlots f. o. b. in 400-lb. sacks, January 31, were: Gluten feed, \$46.55@47; Cottonseed meal 36%, \$48@48.50; Cottonseed meal 43%, \$53.75@54.25; Oilmeal 33% to 34% local billed, \$51.50@52; Dried brewers' grains (nominal), \$49@50; Standard spring bran, \$32@32.25; Hard winter bran, \$32.75@33; Standard spring middlings, \$32.75@33; Choice flour middlings, \$35.25@35.75; White hominy, \$34.80@35.30.

Buffalo prices on feed grains showed few changes. Oats were down 1c bushel and rye was ¼c lower.

CASH GRAIN PRICES CHANGE

Quotations on cash grains both at New York and Chicago show numerous small changes since last weeks' review. Fear that war may result from the European situation sent prices up on January 31, but the nervousness of the market left the prospect very uncertain as to future trend. Prices on February 1, follow:

At New York—No. 2 red wheat \$1.31¼ bu; No. 2 hard winter \$1.27¼; No. 2 yellow corn 90c; No. 2 mixed corn 89½c; No. 2 white oats 55c; No. 3 white oats 53½c; rye for export 99¼c; barley malted 77@79c; buckwheat \$1.93@2.20. At Chicago—No. 2 yellow corn 71¼@72¼c; No. 2 white oats 43¼@44¼c; barley 58@67c; rye 87c.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on February 2:

Eggs, Nearbys (cents per dozen)

	New York	Buffalo	Phila.

Sheep, common to good ewes	3½ @ 5½	6 @ 8½
Hogs, Yorkers	9¼ @ 9½	9 @ 9¼

100-pound bag, a few fancy at \$2.85 @ 2.90. Orange Co. yellows best, \$2.50 @ 2.75.

Inquiries from California last week indicated fear of shortage of onions there, so that Pacific Coast shipments may not come into competition with Eastern onions this year as last.

CABBAGE MARKET FIRM

Cabbage holds steady at good prices. Some Danish variety State cabbage brought as high as \$35 per ton at New York. Shippers paid farmers as high as \$20 @ 24 per ton, but generally under \$20. Total carlot shipments of old cabbage this season are nearly 6,000 cars ahead of entire season last year. New Florida and Texas shipments are about one-third those to date last year.

FANCY APPLES IN DEMAND

Receipts of barreled apples continued fairly liberal last week and there was

riety in quality, size and color. Nearby producers are often dissatisfied with prices obtained on mixed qualities, although their returns are as much as the market affords. Where it is impossible for a shipper to sort his eggs thoroughly in case lots, it is desirable to separate the different qualities in each case. At least two grades should be made. All the uniformly large eggs, including no eggs weighing less than 2 ounces, uniformly chalk-white and free from stains and bloodspots, should be put together. Any cream tinted eggs and undersized should go in with pullets. The very small eggs, commonly called "pewees" in the market, should be kept at home or shipped separately. It does not pay to try to "face up" cases of eggs with a layer of large eggs on top. Buyers always examine two or three layers in a case and if they find the top layer is not representative of the rest of the case, they are likely to be suspicious and unwilling to bother with making a further examination. Express shippers should always put a slip inside the case, listing the number of different classes of eggs in the case. Wherever possible, it is desirable to pool neighborhood shipments so as to make up case lots of uniform size, color and quality.

ACTIVE DEMAND FOR CAPONS

Although there has been a liberal supply of dressed capons from middle-western sections, the demand for them is active. Nearby shipments, 8 to 9 pounds, sack weight, bring 40 @ 45c per pound dressed; 5 to 7 pounds weight bring 32 @ 40c per pound; full slips and poor 28 @ 31c. Capons should be graded closely as to size to bring outside quotations.

Egg Bred White Leghorn CHICKS

Double your poultry profits with our Famous Improved Winter Egg Baskets of S. C. White Leghorns. They are the selected, long, deep-bodied typical hens with large lopped combs, mated to the famous Hollywood and Beal 250-300 EGG Pedigrees. All our breeders are selected, selected, and mated by poultry specialists and inspected and approved as to their laying ability and health.

Our Leghorns are winners at LEADING Egg Laying Contests and Poultry Shows. Thousands of customers all over the U.S. are reaping a golden harvest of eggs the year round from our egg bred layers. You, too, can make big money with them.

FREE Valuable Catalog tells all about EGG FARMING FOR PROFIT and What and How to feed for results. Worth many dollars to you. Get our prices on chicks and eggs before you buy. Write AT ONCE.

The New Improved *Walsh* No-Buckle Harness

Made in All Styles
Breechingless
Side Backer
Express etc

It has been eight years since I invented the Walsh No-Buckle Harness. Today there are thousands of satisfied users in every state in the Union

JAMES M. WALSH

NO BUCKLES TO TEAR

NO RINGS TO WEAR

**30 DAYS
FREE TRIAL**
Send no Money

Backed by the strongest guarantee ever made on a harness.

The average cost of repairs per year is only 9 cents

**My New Harness Book
is Ready Send for Your Copy
Today—Post Yourself**

Handy This picture shows how easy it is to hitch and unhitch. All parts just as simple as this.

Easy Adjustments Walsh Harness can be adjusted from large team to small team in ten minutes and fit perfectly.

Durability Not a single place on Walsh Harness for metal to rub and wear leather.

Quality Only strongest part of hide is used. High-grade, bark-tanned, packers' Northern steer hide leather.

Strength From photograph of an actual test made for U. S. Army Officers. One of our regular Walsh side straps holding seven men in air, and the Walsh strap holder did not slip a fraction of an inch. The same strap with buckle in it broke with three men. Get Free Book for complete details.

Before You Buy Harness

Post yourself on this new way of making harness which has three times the strength of buckle harness. Let me send you a set of Walsh No-Buckle Harness on thirty days' free trial, just as thousands in every state in the Union have done. Let me show you how harness can be made three times stronger without buckles—how much better looking and how much handier in every way. Try a Walsh on your team 30 days. Send no Money. If it is not all that I claim, send it back at my expense. No obligation on your part. Write for the free book today.

Costs Less—Lasts Twice as Long

This wide-open, liberal offer shows that the Walsh must be an exceptionally good harness. If I did not know positively that Walsh Harness is better in every way than buckle harness, I could not make such an offer. In addition to having harness in the hands of thousands of users the country over for years past, I have tested and proven in various ways that my harness is better and stronger, hence cheaper by far than any other harness. I prove conclusively in my new harness book, which I am waiting to send you, that Walsh No-Buckle Harness will positively last twice as long as buckle harness.

Greatest Advance in Harness Making

Not only is the Walsh No-Buckle Harness stronger, but it is easier to put on and take off. It is also better-looking, handier, and eliminates frequent repairs. Has better fitting hames, adjustable strap holder—the harder the pull, the tighter it holds—renewable spring snaps and many other advantages explained in my free book. The Walsh is easily adjusted to fit any horse perfectly. And remember that Walsh Harness actually costs less than buckle harness because it does away with repair expense, and lasts longer.

The World's Strongest Harness

Users say the leather in Walsh Harness is the best they ever saw in harness. It is old-fashioned, bark-tanned, packers' Northern steer hide leather. A test made in a scientific laboratory proved that a Walsh 1½ inch breeching strap holds over 1100 pounds. The same strap with buckle in it breaks at about 350 pounds pull. When you consider that ordinary harness has 68 buckles, and Walsh Harness none, you'll understand why my harness does away with repairs and outwears two sets of buckle harness.

Friction Another Destroyer of Harness

Rings are another thing that makes harness wear out before it should. Examine your old harness and you'll find where rings have worn the straps at the ends. There are 270 places on an ordinary

buckle harness where ring friction wears the straps in two. Walsh Harness has no rings to wear straps in two. Many other advantages are explained in the free book. Write for it today.

What Users Say

Government Experiment Stations, Agricultural Colleges are among the thousands of users in every state who praise the Walsh Harness. Walsh Harness took First Prize at Wisconsin State Fair in 1921 and 1922.

Mr. G. G. Anderson, Aiken, Minn., bought his first Walsh Harness five years ago and bought three more sets since for his other teams. He says: "Walsh

has buckle harness beat a mile."

Mr. E. E. Ward, Seneca Falls, Wis., says: "Have used Harness over 40 years. The Walsh is the best yet."

Mr. J. W. Rogers, R. No. 4, Baldwinville, N. Y., says: "Have used it skidding logs and that is giving it a hard test. I think enough of it that I will order another set in the Spring."

\$5.00 After 30 Days' Free Trial

Balance easy payments or pay cash after trial if you wish. Selling direct from the factory to you enables me to give the highest quality of harness possible to make at lowest prices. You can get a Walsh Harness in any style—Breechingless, Back-Pad, Express, etc. Easily adjusted to fit any horse perfectly.

Write Today. My free harness book will give you many wonderfully interesting facts and valuable information on harness—tells all about the Walsh No-Buckle Harness—what hundreds

of farmers think about it. We have a plan whereby you can make money showing Walsh Harness to your neighbors. There's a copy ready for you—Write Today.

The Ax Followed by the Plow Conquered America

The March of Events in the Ruhr—By J. G. McDonald

Shall We Urge Our Boys To Be Farmers?

Or Is It Best To Let Them Choose Their Own Vocation and Then Guide Them?

WHY should we? It is a big thing to be the backbone of the world. And that is the place a farmer holds, standing second to none, unless it is to the minister and to the doctor—but the three are so kindred in importance that it is hard to give a prominence to one over the others. Our ministers can teach us peace and happiness; our doctors can teach us such care of our physical beings that we can get the maximum efficiency out of them; but, even with well minds and well bodies, none could live without sustenance.

Keenly do we realize the importance of our job when we learn of the backwardness in every way, and of the hardships of their people, of the countries in which agriculture has not been developed.

To be a successful farmer in these days takes an intelligent man. There are few occupations in which a man must know so many different lines. We do not often think of just the breadth this covers, and surely it never has been impressed upon our boys and girls.

The present-day farmer must understand not only kinds of soils and their adaptability, but how to change the composition that certain profitable plant life thereby will do better; he must understand animals, from their diseases to the food they need to give the best paying results; he must be a mechanic and a good repair man; he should make himself into a scholar, that he may understand better and put to good use the knowledge which his government goes to great effort to obtain for him. This is only a smattering of the maze of things he must know. We always have realized that farm work develops the best in man physically, but we have not realized that it is a great business in which to bring out the best in man mentally—if the man will let it.

Where a Man is a Cog in a Wheel

Recently it was my good fortune to go through one of the largest manufacturing plants in the world. That visit gave me serious thoughts. I would be sorry to see a farm boy, particularly one who would have to follow the general routine of the work, go into such a place to work—and I know several who think if they could get into that particular shop to work, it would be the making of them.

The final accomplishments growing out of a system where not a second of time or an atom of man's energy are wasted are overwhelming, but the men's individual work, with the exception of the few who might win promotion, is cramping to their personalities and abilities. They were doing the same little thing—perhaps it was driving a half dozen nails or dropping a half dozen drops of solder—over and over, hundreds of times a day for hundreds of days, over and over! They did not have the satisfaction of creating an article—only one tiniest part of it. What does a job like that bring out of a man in comparison with what farming might.

We might be

urging an actual hardship upon them. The present financial conditions are precarious. Though it is a sure fact that farmers never again will allow themselves to be trodden under the feet of people of other occupations. They will have more and more to say about their own business affairs.

But the biggest reason why we have no business to urge our boys to be farmers is, that it is their right to choose for life the work they like best. If it is farming, encourage them in it. If it is something else, then be patient, encouraging and understanding. With some children it is easy to see their inclinations toward the work in which they will make the greatest success. It is the best-liked work that will bring a full measure of usefulness and happiness to the individual and to the world.—MRS. ELIZABETH M. HOAG, Oneida Co., N. Y.

A Farm Boy Who Decided Later—And Made Good

FATHER, what will you give me a month to come home and help farm?" "John, I will not give you anything. In the first place, this farm isn't paying. There is some debt against it now, and there isn't enough coming in to meet expenses; besides, you will make a better business man than you will a farmer, and you won't have to work so hard."

Ephriam Burket was a good man, a kind father, and an active citizen. He had raised his family well, had helped to start a grange thirty years before, had built a room in which it met, and was an active man in community affairs all his life. He really felt that he was giving his son good advice.

His son, John W. Burket, about whom this story is built, had gone to Philadelphia, received a business education, and was ready to enter into a partnership which promised at least moderate success. His prospects in the business world were not only alluring, but promising. In some way, however, the call of the home farm brought him back to Sinking Valley, a beautiful three-cornered limestone section in which a hundred limestone farms were settled before the nineteenth century.

A Case of "Before and After"

There had been a hundred years of farming on the broad acres owned by Ephriam Burket. Hay and grain had been sold year after year. As long as a field would yield a good hay crop, it was left standing. Although the farm was naturally one of the

best in the valley, corn would yield only 75 bushels or less of ears to the acre. It was a fairly good yield when wheat yielded 15 bushels per acre.

That the yields now average over 135 bushels of ear corn to the acre and 30 bushels of wheat is ample testimony to the ability of John Burket as a farmer and to his wisdom in returning to the farm. As to profits on the farm, Mr. Burket says he never expects to be wealthy, but he also says that there is not a year of the last twenty-five that has left him with a loss. The season of 1921, when very few farmers made any money, and when a great many lost heavily, came nearest to robbing him of profits.

"Good live stock and good line fences" were the two aims Mr. Burket held before him when he took over the home farm. The first pure-bred stock secured was four Shropshire ewes and a ram from the A. J. Cassatt farm, near Philadelphia. Ever since that time his farm has been known as the best source of Shropshires in Blair County. He has maintained rather uniformly a flock of twenty-two ewes. Medium and poor individuals are culled out; breeding rams are kept until two years of age, because Mr. Burket realizes that both his reputation and the performance of the rams are at stake, and he prefers that both the purchaser and himself be assured of satisfaction. Incidentally, his wool has been sold at a premium, because it is always clean and of good quality.

Has No Use for Tractor

"I have no use for a tractor," says Mr. Burket. The reason may lie partly in the quality of his horses. In 1908 he got his first Percheron, and since that time has never been without some registered horses. His best crop, however, he considers his Berkshire hogs. It was 1912 before he got into registered hogs, but since that time they have been a stand-by. He has them because they produce pork. A few animals have been sold as breeders, but the chief aim is pounds of pork. From that standpoint good blood has been a paying proposition.

A factor that has contributed largely to Mr. Burket's success is his inherent desire for knowledge and his willingness to accept that which promises to help him. He feels that the State College is a very large factor in his success. About fifteen years ago he heard Professor M. S. McDowell give a discussion on the famous fertilizer plots at State College. The next fall he attended the Pennsylvania Farmers' Week at the college, especially to study those fertilizer plots.

Neighboring farmers were convinced that

acid phosphate "soured the ground." The fertilizer plots, however, proved to him that 16% acid phosphate was absolutely necessary to profitable crop growing. He came home and has used that "souring" material since. While at college he inspected their corn, which was better than he was then growing, and he said to himself: "John, you'll do well if you ever raise corn like that."

The March of Events in the Ruhr

The Eyes of Europe and America are Anxiously Fixed on This Little Valley

WHAT is the Ruhr? It is simply the valley of a small tributary river of the Rhine. This valley contains about three-fourths of the producing coal mines of Germany and a vast proportion of the German iron and steel mines. The Ruhr is, in fact, the heart of what might be called the German factory, for Germany in the last forty or fifty years has developed into a highly organized and industrialized state, of which the natural resources of the Ruhr and its vast manufactures form the central and most vital part.

What has France done in the Ruhr? Nominally, she simply took over the mines and railways with her engineers, adding only a sufficient military force to protect the engineers. Our State Department recently expressed surprise when anything else happened. They must have known, as the rest of the world knew, that this talk of occupation merely as an engineering enterprise was absurd, and that it would inevitably develop into a military enterprise, as it now has. Instead of the 25,000 troops which France first had there, 100,000 are now involved in an invasion and a military occupation of the very center of Germany's industrial life.

The question of the Ruhr is important not only from the point of view of the Ruhr itself and what it involves, but also because France's actions there may mean very serious things for Germany, for France itself and indirectly for all of us. It also illustrates what I feel is the dominant situation in Europe to-day—a situation which might be contrasted with that which followed the signing of the Armistice in 1918.

You will remember the enormous thrill of relief when slaughter seemed ended and we all felt that at last we had peace, an opportunity for reconciliation and a chance to start the work of rehabilitation. This was more than four years ago. To-day there is less peace in Europe than in 1918, more bitterness, hatred, suspicion and jealousy. Many portions of Europe economically are worse off than at the end of the war. These are the dominant characteristics of the foreign situation.

The Ruhr invasion has not surprised anyone who has been following the march of events. It is, however, significant in bringing to the attention of those who have not, that Europe is, in the

By J. G. McDONALD

judgment of most observers, facing a situation in many respects as critical as that of July, 1914.

There are two sorts of reasons why

There are four facts which Frenchmen never forget and which both British and Americans are inclined to forget:

First, there is the simple fact that France is less than 40,000,000 while Germany is 60,000,000. Ten years from now, France will be 40,000,000 or less and Germany will be approaching 70,000,000. Twenty years from now, France will be 40,000,000 or less, and Germany more than 70 or 80,000,000.

Second, Frenchmen remember that, in order to dissuade them from following the advice of their militarists and taking over the Rhine as an armed frontier, they were promised two things by Great Britain and two by the United States. The first was the participation of both allies in the League of Nations. Britain is in and we are out. France was promised, moreover, a triple alliance or guarantee against German aggression consisting of the

United States, Great Britain and France. We refused to ratify and Britain, taking advantage of our stand, refused also. To the Frenchman therefore, he has been twice deserted by us and once by Britain.

Third, France has never been paid for her devastated regions. Perhaps one-half of these have been rebuilt at enormous cost, without anything being received from Germany towards the expenditure. This does not mean that Germany has not paid anything. She has paid the Allies, in gold and goods, conservatively, from five to six billions of dollars. How does it happen that France received no reparations from this? All the cast of these payments which was available for reparations in devastated regions went to pay bill collectors. Except for a very small amount to Belgium, the money has been used to pay the French, British and Italian armies in Germany.

Fourth, unpaid France sees herself faced by two former allies, changed into persistent and nagging creditors. Britain, more willing to forgive her debt than we, still does not agree to do it unqualifiedly, while the United States refuses to diminish the debt at all.

Summing up, France sees herself enormously outnumbered by Germany, unsecured except by the League of which we are not a part, without the promised triple alliance, unpaid for her devastated regions, and unforgiven by her creditors. Is it surprising that

(Continued on page 140)

"A Consensus of Various Opinions"

"I SHALL try to give you," said Mr. James G. McDonald, to an audience recently, "not so much a personal judgment, as a consensus of various opinions. What it lacks in definiteness and dogmatism may be made up, I hope by fairness and tolerance."

It was the notable fairness and tolerance of the address which especially appealed to the editor and led him to ask Mr. McDonald for the stenographic report. As chairman of the Executive Committee of the Foreign Policy Association, which seeks to broadcast accurate and impartial information of world conditions and thus to help shape an intelligent and consistent attitude in our relations with other countries, Mr. McDonald has had unusual opportunity to examine American policy—or lack of policy—in the light of international events.

France went into the Ruhr—the nominal reasons and the real reasons. Before taking up the latter, two or three basic considerations must be understood if we are to be fair to France and the French psychology of to-day.

From the New York "Evening Post."

WHERE FRANCE WILL COLLECT FROM GERMANY

The Ruhr Valley where French troops, in the words of Premier Poincaré, have gone "to force respect for France and the Versailles Treaty." This region, which has been called the "solar plexus of industrial Germany," "the richest jewel in the Prussian crown," is full of coal-mines, steel-mills and textile factories. The diagonal shading indicates German territory held under the peace treaty; the spotted region, the Ruhr basin. The Krupp works are at Essen; the headquarters of the Stinnes organization are at Muelheim, between Essen and Duisburg.—

VOL. 111 February 17, 1923 NO. 7

What Is the Ruhr?

SO confusing has the present political situation in Europe become that even those who have tried to follow its developments closely have been asking: "What is it all about?"

Among the new names which have assumed sudden importance is that of the Ruhr, the little valley whence something very like war news issues daily. The significance of the Ruhr just now is a much-discussed and not always a clearly understood problem.

The American Agriculturist is fortunate in having secured from Mr. James G. McDonald the stenographic transcript of a recent speech in which he set forth clearly the ins and outs of the present Ruhr situation. Mr. McDonald's interest in the subject is that of a historian, rather than of a partisan. He presents the pros and cons of the matter in brief, logical fashion; no one who reads his article can fail to reach a better understanding of some of the perplexing problems now agitating Europe and also involving this country.

Mr. McDonald is Chairman of the Executive Committee of the Foreign Policy Association which is strictly non-partisan, having as its object the study of questions affecting the United States and the dissemination of accurate information about them. He thus has had a unique opportunity to become acquainted with the different representatives of European countries who have visited America officially or informally and has thus obtained, at first hand, valuable information on the present international tangle.

We should very much like to know whether or not the publication of articles on foreign affairs and their influence on American conditions is of interest to our readers. We welcome criticism and suggestions, and have been encouraged to continue the use of such material, especially when it comes from re-

liable and, as in this case, impartial sources. We shall be guided by what our readers write us in planning future feature articles.

The Way to Gain Confidence

THIRTY-EIGHT thousand stockholders of the Grange League Federation Exchange are to be congratulated on the financial report of the year's operations which has just been given them, in spite of the fact that this report shows a deficit.

It costs money to establish any business and to build up trade and good will. There are few business firms to-day that paid any dividends while they were getting on their feet during the first years of operation. The G. L. F. report shows that this cooperative organization is fundamentally right, and that it is making all the progress that can be expected. Success in the future will depend upon the support which it receives from its members, who own it.

The officers have laid all of the cards face up about their business on the table, and given their stockholders all of the facts and figures without any attempt at sugar-coating. In doing this they have recognized the ability of farmers to properly judge a situation when they have the facts, and they have recognized the principle that the permanent success of any cooperative organization depends upon the confidence of its members, and that the first rule to gain and keep such confidence is absolute frankness between officers and members.

Farmers Are Learning to Speak Up

A FARM leader recently made the statement that farmers just naturally will not write letters and he went on further to say that because they do not write letters their problems have not until recently received as much attention as they should from legislative and other leaders in public affairs.

How true it is that most farmers will wait sometimes two or three weeks in the hope of seeing a man personally so that they will not have to write a letter to him. We are sympathetic with this attitude for we know from experience how hard it is after a long day's work to sit down to a desk, hunt up a rusty pen and to write a letter with ink that was frozen two years ago last hog-killing time. It is this same distaste of desk work on the part of farmers that makes it so difficult for them to keep necessary records of their business transactions.

But here's the point. There is not very much use of working so hard on the production end of farming unless something more is done on the marketing and business end. While the farmer delays writing to a representative asking his support to some necessary farm legislation, the city man gets there first with a lot of letters and defeats the farm legislation. When the farmer delays writing until he can see a man personally, the other fellow gets there first with his letter and gets the business, and while the farmer delays to keep any farm records, the bad parts of his business which he does not know about go on piling up losses until he feels like closing up and moving to town. More and more farmers are learning the necessity of being more expressive, and to realize that the pen, or better still the typewriter, is as mighty as the pitchfork in the farm business.

Something to Think Over

WHEN freight rates were low and Western land was cheap, there was some excuse for the purchase by Eastern farmers of large quantities of Western-grown feed. But conditions have changed, and successful

dairyman, large and small, must change their business to meet those conditions. Land which was formerly cheap in the West has become dear. The one-crop systems of the West have reduced the fertility of the soil. Freight rates are high and are bound to continue high.

There was a time when our fathers used to produce great quantities of husked corn. They stopped growing it because the West could do it cheaper, but with present prices of feed many Eastern farmers are finding to their surprise that they can now grow corn at a cost which will successfully compete with that purchased from the West. The same is true, too, of many of the small grains, and much more attention is being given by Eastern farmers to legumes like alfalfa, soy beans, and clovers which are high in protein content that help to keep down the amount and the cost of purchased concentrated feed.

In planting crops for the coming year, this changed feed situation is something that every dairyman should think about. As one farmer recently said: "The time is evidently past when Eastern dairy farms can be nothing more than feeding stations for Western grain."

Take Time to be Sure

WHY hard-headed and otherwise sensible farmers continue to invest their lifetime savings in worthless stocks and other get-rich-quick schemes is certainly hard to understand. Yet, hundreds of farm people are constantly being swindled. Oil stocks catch the most, but other ingenious schemes and baits for the unwary get their share and no amount of warning seems to have much effect.

Recently a smooth talking stranger appeared in Southern New York with a plausible scheme for selling stock in a big industrial plant to be put up in Syracuse. He would take no cash, but took the farmers' notes which were to be paid when the plant was built. The investors heard nothing more until one of the notes turned up in the hands of an innocent third party and the investor had to pay it.

If farmers would only remember a few fundamental principles what a world of trouble might be avoided. Notes should, of course, never be signed for strangers. The first place for any surplus cash is in your own farm, a business that you know something about. The second place is in Government securities. These are absolutely safe and pay a fair rate of interest. Nearly every village contains bankers and lawyers whose business it is to know about investments. These men will give you advice which can be relied upon, and there are few business deals that cannot wait until you can talk the matter over with them. The Service Bureau of American Agriculturist will be very glad to investigate any proposition for you and advise you about it without charge.

Quotations Worth While

We rise in Glory as we sink in Pride;
Where boasting ends, there Dignity begins.
—YOUNG.

It may not be quite fashionable to believe in common honesty, but it is a good piece of furniture and will last a man his lifetime.

I have seldom known one, who deserted truth in trifles, that could be trusted in matters of importance.—PALEY.

It matters not so much what part we play, as it does to play our part well. In a drama it is not so much a question who played the King or the Peasant; as who played the part best.

The Hired Man's Complaint

Did You Ever Stop To Consider This Particular Angle of the Question?

LAST summer, while I was going to Philadelphia on a train, a working-man with his dinner pail sat beside me. He soon spoke of living out in the country, and said he went in daily to work in the city. I said to him: "I should suppose you could get work around home now, every farmer is busy, and help seems to be scarce." That started him as follows: "These farmers won't hire a man unless they have a big day's work all ready, so they can put him through and make him do more than any man can stand, week after week. They won't try to make work for one so as to give him steady employment and allow him to live. No, they want him to lie around half the time doing nothing, but be ready on call to do two or three days' work in one, to work long hours, and then they complain about the price, and often I have to run after the money several times before I get it. I am glad to see some of them hard up for labor; it will do them good. Perhaps they will learn, in time, to do more as they would be done by. I bought a little home in the country and was willing to earn my money faithfully, but they starved me out. Now I go to town, have steady work, regular hours, am never over-worked, my pay comes on time, and I am able to take much better care of my family. No, I have got all I want of working for farmers."

Now, did you ever think of the laboring man's side of the question as he has put it? There is much complaint of men going to town or shop or factory to work, of the scarcity of help on the farm. The laborer wants to do his best, the same as you do, for himself and family. Doesn't that sound just natural, about getting a man when you had a solid day's work, at pitching hay, hauling and crating peaches, digging potatoes, cutting corn, some hard job all ready to put him through?

I have done it lots of times, and I confess to never thinking that he could not work like that every day of the year, any more than I could. And haven't you kept a man at work more hours than he would have to put in in the city?

We always made it a rule to quit at 5.30 p. m. But I am afraid I laid out a little too much sometimes, so they had to put in a few minutes extra to finish up; it is so natural when one is trying to get ahead.

But my conscience is clear on one point: No man ever had to run after his pay on our farm when the work was done. He got it in cash or check every Saturday night, or when he wanted it. The money was in the bank, ready, no matter how short we might be ourselves, and our men got their pay promptly. That much every employer owes to labor, surely. And, as a rule, we pay our men more than others do. First, we employed only the best, at least those that were willing to earn their money, and then

we never liked to feel that they were not fairly paid. And that matter of making work for men—those not employed by the season or month: I certainly have done it many a time.

During a breathing spell between haying, hauling peaches, cultivating, etc., I nearly always had jobs ready for them, cleaning ditches, cutting brush, fencing, mowing lawns, cleaning stables, or something. Maybe this was partly selfish, to hold the men

long hours, slowly but surely the best men will go where they can do better.—C. A. UMOSELLE, New Jersey.

The Credit Problem and Risks

I WAS especially interested in your editorial entitled "More Than Credit Needed." My observation for a number of years is that the person who can use credit profitably does not have much trouble in getting it under present conditions. Banks here, of course, do not loan on long-time loans, but they give their patrons the privilege of renewal of notes, and in this way the interest is kept up to date.

There are many persons—farmers and others—that if they can get credit easily they take risks that do not show good business judgment. The result is that their ventures do not turn out profitably, and pay day finds them in a worse condition than they were when they made the debt. A system that would make borrowing easy for farmers of this class is dangerous to both the borrower and the lender. It probably would be best for farmers to be enabled to hold their crops off the market at certain times, but if all would adopt this plan, would not the glut of the market finally come, or would not its life be just prolonged over a longer period of time? The higher the price of a commodity, the less of it is used. High prices make us economize in its use.

Take wheat as an example. If we should have a very large wheat crop, and the price of wheat was below cost of production, suppose that farmers should borrow money and hold the wheat, or a large part of it, over until the next year, and there was another good wheat crop, the holder of necessity had to pay interest on the value of his old wheat crop, which is held only to come in competition with a new crop of wheat that perhaps would not sell higher than the old one would have sold. Thus we see that there is a risk in holding.

On the other hand, if the crop had been sold and the money put to interest for one year at 6%, provided it could not be more profitably invested, could not a slight difference between cost of production and the selling price have been made up without so much risk to the producer? If a business man makes what he finds to be a poor investment, he gets what cash he can out of it as quick as he can and invests his money in something which he thinks will bring him a profit.

Is it not usually the safer plan for the farmer to do the same rather than to take greater risks on borrowed capital?—A. J. LEGG, West Virginia.

I hate a sharp tongue, the ruin of kingdom and home. I long for silence.—CONFUCIOUS.

The Importance of New York in American Agriculture—No. 5

Although this chart indicates that New York stood second in 1921, nevertheless on the five-year basis New York ranks as the chief apple producer of the United States

until the big jobs, where I must have them done; but still I don't believe any of the men who worked for us ever talked about us as the one quoted above did about the farmers who employed him. More than once my wife and I talked it over, that come what might we did not want to get ahead by not treating hired men as well as we would want to be treated in their places. We tried to remember, if there was extra work to do at night, that we were getting paid for what we did, while, unless we paid the men extra, they were working to help us without reward.

Think of these things, dear readers. Are they not right, and also the best business policy? Get good men, study to make their labor pay well, and then see they have a fair share of the reward. If farmers are poor pay, and furnish irregular work and demand

Invest in a McCormick-Deering Manure Spreader for More Profitable Farming

The basis of profitable farming is a fertile soil. In farming, as in other businesses, there are poor years and good ones, but the farmer who keeps up the productivity of his soil will forge ahead.

No method of maintaining soil fertility has proved so efficient as the proper application of barnyard manure. It is a foresighted policy to build up crop yields with a McCormick-Deering Manure Spreader. Put manure on your fields finely, evenly, uniformly, and economically; the extra fertility will in a short time pay for the McCormick-Deering spreader.

Note again these features in McCormick-Deering construction: 1. Power delivered from both wheels. 2. Double ratchet drive with six feed speeds. 3. Short-turn front axle—no pole whipping. 4. Rear wheels track with front wheels. 5. Tight bottom. 6. Two beaters and wide-spread spiral. 7. All-steel main frame.

INTERNATIONAL HARVESTER COMPANY

Chicago of America U S A
[Incorporated]

93 Branch Houses and 15,000 Dealers in the United States

IMPROVED AND HIRUCO PEDIGREED SEED

PEDIGREED OATS treated to prevent smut. CORNELLIAN—Development—Single plant selection by Plant Breeding Department New York Agricultural College. A tree oat slightly gray in color, good stiff straw. In five years' trial on Agricultural Experiment grounds at Ithaca, has yielded about five bushels more than nearest competitor. Of all varieties under test there in 1920, it was the thinnest hulled variety and had the largest percentage of meat.

SVALOF VARIETIES, STOCKS SECOND CROP FROM SWEDEN.

VICTORY is the leading white variety in New York State. In four year tests by Department of Plant Breeding shows this second to Cornellian. Good stiff straw. Should be sowed thin.

CROWN newer sort than Victory, longer kernel. In Sweden outyields Victory on particularly good soil. Lodging resistance good. Should be sowed thin.

GOLDEN RAIN, yellow oat, remarkably stiff straw. In Sweden is unexcelled as regards soil. Grain medium and heavy with thin hull.

Price on all above sorts \$1.50 per bushel.

PEDIGREED BARLEY, Cornell's two favorites, FEATHERSTON No. 7, a six row barley originated at Minnesota Agricultural Experiment Station. Medium, tall stiff-strawed sort, high yield heavy grain. Recommended for separate grain crop. Most consistent high yielder of all six row sorts at Cornell Agricultural Experiment Station. None of this variety available but what shows trace of two row.

ALPHA two row, a hybrid. A tall stiff straw sort maturing later than standard six row. During five years has excelled all other sorts in yield at Cornell Experiment Station. Especially desirable for sowing with oats. We recommend the Victory or Crown in combination with Alpha.

Price—Featherston \$2.00 per bushel, Alpha \$2.24 per bushel.

SEED CORN, New York State grown from selected ears in special fields.

CORNELL ELEVEN (Pedigreed). Developed by Plant Breeding Department, New York State

All prices are freight paid, bags free. All orders to be accompanied by 25% cash or 3% may be deducted if making payment in full.

Investigation through Farm Bureaus or Agricultural Colleges invited.
HICKOX-RUMSEY CO., INC. BATAVIA, N. Y.

College of Agriculture through individual ear-to-ear selection. A yellow dent corn successfully used for ensilage and for husking as well in the more favorable sections of New York State. Average requirements 120 days for maturity. For grain use 4 to 5 quarts per acre. For ensilage use 6 to 8 quarts.

OIL DENT (Improved), for husking and ensilage. Somewhat earlier than Cornell Eleven. Adapted when elevation too high or season too short for Cornell Eleven. Same rate planting.

A trial of this seed properly put in will wear buyers of cheap seed. Prices both varieties—Screened \$3.00 per bushel. Tipped and butted for accurate planting in check rows \$5.00 per bushel.

CERTIFIED POTATOES, HIRUCO NUMBER NINE, smooth skin Rural type, having special care by our Plant Pathologist. Very free of disease, special care taken to eliminate Giant Stalks, treated for rhizoctonia and scab, then held in cold storage. Especially adapted for seed plots, \$3.00 per bushel, two bushel sacks. **GREEN MOUNTAIN**, a strain having special care of our Plant Pathologist. Treated and carried in cold storage for seed plots, \$3.00 per bushel. **IRISH COBBLER**, a strain exceptionally free of disease. For seed plots, \$3.00 per bushel. **BLISS TRIUMPH**, one of the best strains in the United States. Exceptionally free of disease. For seed plots, \$3.50 per bushel. Packed in one bushel boxes, \$4.00.

NUMBER NINE, grown from HIRUCO Number Nines. Put up in 2 or 2½ bushel bags, \$1.75 per bushel. **RURAL RUSSETS**, grown from one of the best strains of Russets in the State. Put up in 2 or 2½ bushel bags, \$1.75 per bushel.

SOY BEANS, Black Eyebrow, an early sort. Bids fair to be most popular sort in New York and Pennsylvania. Price \$4.50 per bushel.

HUBAM SWEET CLOVER, Searified, high germination and purity. Grown in New York. Price small lots 50 cents per pound postpaid. Bushel lots or over, 40 cents per pound.

An Oft Debated Subject

The Proper Handling of Manure is Not Settled Yet

Will you kindly give me some information on using sheep manure? I would like to know what crops it is good for and something about handling it.—CHARLES H. BORCHERS, New Jersey.

By H. E. COOK

once or twice during the summer season.

THIS question seems like an old friend, for of late manure subjects have been less to the front and I am rather pleased to get it. The conservation and handling of animal manures is a long way from being settled along lines that give us the largest returns and the least loss. There has been marked improvement, however, in the dairy sections of the East through the construction of concrete stable floors and direct hauling from

H. E. COOK

stable to field. Boards of Health should have some credit for they compelled the water-tight floor and the removal of manure daily from near the buildings. So if it must be taken a short distance, we may as well move it to the field and have the job done. This method for the major part of the year is altogether the cheapest and best. In many sections this plan is impracticable, perhaps the fields are open or the manure is used principally for top dressing meadow land where better results will be obtained by fall application with a spreader.

It is, I think, a fairly safe statement to make, that the same amount of plant food in manure will bring

Air, heat and water are always necessary for decay whether a fence post or a pile of manure, and if the change is to be uniform throughout the pile, then these three requirements must be uniformly present. Hit or miss piling will not be satisfactory.

Composition of one ton average manure from farm animals:

	Water	Nitrogen	Phosphoric	Potash	Value
	Per cent	Lbs.	Acid Lbs.	Lbs.	Dollars
Horse.....	78	14	5	11	\$3.30
Cow.....	86	12	3	9	2.74
Sheep.....	68	19	7	20	4.74
Pig.....	87	10	7	8	2.52

"Horse and sheep manures contain less water than that of cows or pigs and are known as 'hot manures,' because their low water content permits rapid fermentation when stored. On the other hand the voidings of the cow and pig form 'cold manures,' the high water content checking fermentation. Sheep manure has the highest value per ton based on fertilizing constituents; cow manure the lowest."

The foregoing table and paragraph is taken from Henry's Feed and Feeding page 278, issue of 1915.

Again I quote Van Slykes table, page 295, Feeds and Feeding:

	Nitrogen in		Phosphoric Acid in		Potash in	
	Urine	Feces	Urine	Feces	Urine	Feces
	Per ct.	Per ct.	Per ct.	Per ct.	Per ct.	Per ct.
Horse....	38	62	0	100	44	56
Cow....	51	49	0	100	85	15
Sheep....	48	52	5	95	70	30
Pig.....	33	67	12	88	43	57
Average.	43	57	4	96	60	40

I have used these tables for the benefit of our subscribers and others who may not have given time to study

Whatever the right method of handling manure is—this is certainly not it

more crop return applied to a good husky sod with a spreader in the fall than in any other way. Grass roots will absorb plant food up to freezing time and they are then stronger and better able to go through the winter. The mulching effect is also valuable to which can be added the increased bacterial growth near the surface, a pretty important part of grass growing. For corn growing there can be no question that direct-from-stable-to-field application is best.

On the other hand, the trucker has a different set of problems to deal with. He wants rapid plant growth for plants that must have an excess of available plant food ready for them from start to finish, and this can not take place with coarse fresh farm manures. The organic matter must be decomposed by some sort of holding process. A cement pit is best where no liquid is lost. If this plan is not available, then careful holding in piles is next best. Where considerable bedding is used, the loss will be small if the pile has perpendicular sides and a dishing top that will hold uniformly distributed the summer rainfall which will all be needed to decompose the mass. One can often notice piles, irregular in every way with the rainfall passing through it in spots. This means parts leached by excessive drainage and parts half dry from lack of water.

If very complete decomposition is desired, the pile should be forked over

the difference in the make-up of farm manures, not including poultry which is in a class by itself.

The Value of Sheep Manure

Sheep manure is seen to be worth about 70 per cent more than cow manure and is high in nitrogen, phosphoric acid and potash and low in its water content and if allowed to heat would lose nitrogen very rapidly. On the other hand it very seldom does, because in the summer it is tramped down tight expelling the air and literally canning it with no loss. There is not water enough anyway to leach out, with some bedding, and it will not heat. Sheep manure can usually be depended upon to measure up to and use less than others, which are likely to have lost in handling.

No one can tell how much to use of any animal manure. It is determined by the previous texture and fertility of the soil, the amount of moisture normally carried in the soil during the growing season, the amount of bedding and the state of decomposition. When the soil is in fine physical condition, always moist and open textured, less manure is required, although soil in this condition will safely take more coarse unrotted manure than a hard dry soil. Never forget that coarse green manure in a dry soil will be of little value beyond the liquids and may be a positive damage until rotted and

(Continued on page 142)

Experiences With Sudan

What We Have Learned of This Forage Crop

FOR determining the value of new varieties of forage plants it is well to compare the experience of as many as possible of those who have grown them for a few years in different localities and under different conditions, and different modes of culture. Perhaps our experience with Sudan grass may be helpful. Last year, 1922, we had one row in the garden that was well cultivated and kept entirely free from weeds and other grass. The plants were slow in coming up and of slow growth at first. Still after they got started the growth was rapid and rather remarkable, especially the stooling habit of the plant.

It was cut four times and when heavy frosts came there was still a broad solid row of healthy green. It was hard to believe that those small plants at first could attain such a spread of branches. Although the season was unusually dry, there was no brown or dried leaves on this forage. This year we prepared quite an area, getting the ground in fine shape, plowing under a coat of manure and sowed the seed broadcast the 25th of April, the same date of last year's garden sowing, and covered with a light plank drag.

The plants came so slow and scattering that the weeds got the start to the extent that the piece was mowed over July 1, and left on the ground. There was a good growth after this that had the start of the weeds. This was cut August 1, and cured for hay. The grass then again made a good growth so that on September 18 it was again cut, averaging about four feet in height, a good, clean and well cured crop.

A Heavy Third Cutting

A safe and conservative estimate of this third cutting is a half ton on the quarter acre. Our experience with this forage these two years leads to a belief that it will prove of great value when grown on land adapted to its growth, for like its cousin the corn plant, it will not thrive on land that is cold and wet, or where the rank weeds get the upper hand.

Join it in rows about the same as beans, twenty-eight inches apart, and cultivate the crop. Still there were mistakes in the management of this year's crop that would have made a great difference if we had only known. I believe that if the ground had been kept under cultivation a month longer or until May 26, so as to kill those weeds, and get a firmer seed bed, and if the seed had been harrowed in lightly and rolled, there would have been a different report on the 1922 experience. For sowing the seed broadcast it will not work with the grass-seed machine, and is too small to sow with the grain drill, so it appears that the old-fashioned hand broad-casting has to be practiced. The seed greatly resembles that of broom corn, as this plant belongs to the corn family. It appears to be adapted to a wide area and when we became wise as to its requirements and habits there is little question as to its value as an addition to our already large number of forage plants, as its drought resistance is remarkable and it will afford an abundance of choice green fodder through the dry season of July and August. As there is abundance of moisture in the ground at this date, there is plenty of time for this stubble to start up and make a good growth before heavy frosts occur to kill it and this can either be pastured off or allowed to remain as a winter mulch for the ground, the value of which is often overlooked in our farm management.

HARDINESS DETERMINES THE VALUE OF SEED

A. L. BIBBINS

The hardiness of seed depends largely upon its pedigree and origin. A great difference exists between the hardiness of seed produced in Europe, South America and southern regions of the United States, as compared to seed

By H. E. COX

coming from hardier regions of the North.

It is also found that there is a difference between the seed coming from various sections of the North where there is a more severe test of the hardiness and only the fittest can survive.

It is the wish of the writer that every reader of the American Agriculturist might visit some of the tests conducted by the agricultural colleges and the United States Department of Agriculture. They would see for themselves the comparative differences in hardiness and productiveness of seed coming from all points of the world. If every eastern farmer were to follow the lesson brought out by this test, their net income not only from forage crops, but from the farm as a whole, would be materially increased.

In one test in particular, samples of clover seed produced in northern Europe, southern Europe, South America, the middle western states, northern states, northwestern states, on the Pacific Coast were planted side by side under exact soil and climatic conditions. Seed coming from Poland, Germany, Hungary, northern and southern France, Italy and Chile gave equally as good catches as that coming from Indiana, Ohio, Illinois, Michigan, Wisconsin and the northwestern states.

First Winter Shows Weaknesses

After one winter had elapsed, there was a marked difference in the various strips of clover, some cases only a half a stand remained. In other cases not more than 25 per cent of the plants had lived over the winter and in some strips a complete failure resulted. This was particularly true of the seed coming from South America, Spain and the Mediterranean districts of Europe. The conclusions drawn from the tests were that the productive value of seed grown in foreign countries is very doubtful when seeded under North American conditions.

One very interesting point brought out was the hardiness of seed coming from a few sections of Michigan. This same seed also produced the greatest amount of second growth which is a valuable point to consider. For dairy-men in need of pasture, such seed has an additional value. After removing the hay crop, the strong second growth provides excellent pasture. Even though pasture is not needed, this second growth is of considerable benefit as it provides a leguminous growth to turn in under as a soil enricher, the benefit of which is spread over several years.

Most of our remarks in this article have pertained to clover seed, but we wish to assure our readers that the differences in most cases, were more striking in the alfalfa tests and it is of equal importance to be positive relative to the origin of alfalfa seed.

Danger in Imported Seed

There are several million pounds of imported alfalfa seed in North America to-day. These tests have shown that such seed cannot be compared with the productive and hardy strains produced in the best growing regions of North America. We are also confronted with the existence of several million pounds of seed raised in the South and southwestern territories of North America, which is also poorly adapted to our Northern conditions.

We can no longer afford to gamble on our seed. The value of the crop is too great. The best of soil fertilizers and culture conditions cannot produce a successful crop unless the very best of seed be used. The seed is the underlying foundation.

COMING EVENTS

February 21-23, Eastern Meeting, N. Y. State Hort. Society, Poughkeepsie, N. Y.
March 3, Boston Market Growers' Association, 12 S. Market St., Boston, Mass.
March 12-17, International Flower Show, Grand Central Palace, New York City.

May 15-16, American Guernsey Cattle Club, New York City.
June 21, Dairy-men's League Cooperative Association, Utica, N. Y.

DIBBLE'S SEED POTATOES

Northern-grown from pedigree stock seed, on soils especially adapted to the best development of each variety, are unexcelled as to purity, quality, vigor, freedom from disease, and productiveness. For this Spring's planting, we offer a stock of around

100,000 BUSHELS

which were taken direct from fields where the vines ripened naturally or grew green until killed by frost in the late Autumn. Our list comprises "The Best Fourteen Varieties" extra early, early, medium and late, a selection approved by Dr. William Stuart of the U. S. Department of Agriculture, whom we consider the greatest American authority on potatoes. The best potato for main crop is Dibble's Russet, a variety that we have found to be more vigorous in growth, more free from disease, and more productive than any other sort now grown on American soil. Scores of our customers have written us that Dibble's Russet "has doubled their crops." If your crop last season was unsatisfactory, or if your seed is "run out," now is the time to get new stock seed. Seed potatoes are cheap this year. We have a few thousand bushels of Dibble's Certified Russets at most attractive prices. Send at once for Dibble's Farm Seed Catalog, 10 sample packages of Dibble's Farm Seeds and Up-to-Date Price List, FREE. Address, EDWARD F. DIBBLE, SEEDGROWER, Box A, Honeye Falls, N. Y.

KINGSTON, PA.

Three implements for the price of one

You can buy separate seeders, single-wheel hoes, and double-wheel hoes—but that's not necessary. This Planet Jr. No. 25 combined seeder, double and single-wheel hoe is all three implements in one, as practical and as economical a tool as is made. This substantial implement combines the accuracy and simplicity of all Planet Jr. seeders with the separate and distinct advantages of Planet Jr. single-wheel and double-wheel hoes. Complete equipment includes hoes, cultivator teeth, pair of plows, and marker, all oil-tempered by the special Planet Jr. process. Compare this implement at your nearest Planet Jr. dealer. Write us, or ask your dealer for the Planet Jr. catalog.

Allen's Book of Berries for 1923

If interested in making more money from your farm or lot and more health and pleasure from your garden, you should have a copy of this book. It tells all about growing STRAWBERRIES, the most delicious of fruits. For years they have been the leading CASH CROP wherever grown.

This Book of Berries gives simple understandable information about how and when to plant, how to prepare the land, and what varieties to grow for best results. Good plants, true-to-name, the best you can buy, are fully described and reasonably priced.

The information and descriptions are dependable, based on 38 years experience in growing, selling Strawberries and Strawberry Plants.

It is the most complete book of its kind—thoroughly reliable. It's free to any one interested. Write for copy today.

The March of Events in the Ruhr

(Continued from page 135)

she has been deserted, even betrayed, by those upon whom she naturally would have almost completely relied?

Reasons for the Invasion

As to the reasons why France went the Ruhr, the first and most direct which she advanced was that she could thus collect the profits of the German mines, factories and railways and also could impose a special tax on things which went from the Ruhr into Germany. The first object has already failed. It never seemed it would work. You cannot substitute for the normal economic control of a vast and intricate machine such as the Ruhr, a foreign military control without turning profit into a loss. Business men know that the line between profit and loss is very narrow. It was certain from the beginning that whatever else the occupation did it would not bring income from industry or taxation.

The second reason was the bringing of pressure to bear on the German Government and German industrialists to do what they had failed to do without pressure. This, too, I think will fail first, because the country is now in such a state that no amount of coercion can force her to pay substantial money payments, and second, because German industrialists have put their funds outside Germany and cannot be forced to bring them back.

Taking these points up in order, we consider first the economic condition of the country. Casual travelers say that Germany is prosperous; that workers are busy, employers piling up dividends and evidences of luxurious living are everywhere. The prosperity of Germany is a mockery, however, for it is based upon fundamental weakness, as evidenced by the dramatic decline of the mark within the last few years. One of the reasons for the apparent wealth is that no German is saving money. The continuing fall of the mark means that money saved ceases to exist; therefore everybody is buying goods which, at the end of a few months, will still have value. With everybody selling marks and nobody buying them, it is inevitable that they should reach the vanishing point. Germany is going the way of Austria and Russia.

So far as the industrialists are concerned, Stinnes and others upon whom France wishes to bring pressure will avoid payment, because their funds are outside Germany and they cannot be forced to bring them back. Sir Robert Horne, the English economist, recently said that there was only one condition under which these German credits, which may amount to from two to four billion of dollars, now placed in Holland, Great Britain and the United States, could be brought back and made a source of reparations; that is, by making Germany so prosperous that the industrialists would be paid to bring them back. There is no other way except confiscation, which under modern arrangements of international relations, is impossible.

Dangerous Security

The third reason for going into the Ruhr was security. As long as France holds the Ruhr, the French argue, Germany at least will be helpless. This is true, but it is dangerous to France, because if she continues to hold the Ruhr indefinitely, the chances are that not merely will the mild resistance by sabotage, strikes and passive obstruction continue, but there will be a serious condition of social, economic and political upheaval in Germany, which might easily result in complete dissolution of what we know as Germany.

France might say, "We can stand it as long as the Germans can," but how long will Great Britain and the United States stand it? Britain's stake in the recovery is not merely idealistic or political—she must feed her people and avoid starvation for her workers. If France's actions point toward a break-up of Central Europe, I believe Britain would check the French game. How, I would not venture to suggest, but I have confidence in the British soundness of judgment and willingness to be guided rather by intelligence and common sense than by passions and

hopes. So even security will be a rather doubtful issue for France.

This may end in failure and withdrawal of the troops, or in partial success, and withdrawal, but more probably the result will be part failure and part success and will lead to a continuance of the occupation until both Germany and Europe as a whole suffer seriously. The danger lies in the fact, that continued pressure might so encourage the enervating and dissolving forces in the German body politic, that it would bring about a situation in Germany like that in Southeastern Europe and Russia.

Two Problems Remain Unsolved

Quite aside from the result of the occupation, two major problems will remain unsolved—reparations and inter-allied debts. The whole matter is so complex and involved that no human being can understand it, much less suggest a formula to solve it. All we can do is to put our finger on one or two obvious obstacles to normal recovery. Two which are checking the natural curative forces which should be freed to work effectively against those of disintegration are the questions of what Germany owes the Allies, and what the Allies owe each other.

The problem of reparations has been bedeviled for the last four years by the settlement at Paris. The basis mistake was the fixing of a sum for Germany to pay, which was three times what rational people thought she could pay. This happened because of the war psychology in France, which would see no diminution of the claims against Germany, and also because at the last moment President Wilson was persuaded to include two items which had no legal basis—pensions and separation allowances. This trebled the bill, making it a fantastic sum which at once destroyed German credit and weakened the German desire to pay. And, even worse, the portion which France was to receive was reduced from 75 per cent to about 50 per cent.

That is the story in brief of the failure of the peace-makers. Politicians have been trying to undo the effects ever since, but with little success.

Mr. Hughes suggested in New Haven that France consent to the appointment of an international committee of experts, to treat Germany as a bankrupt, determine her assets and find out what she could pay on a business and not a political basis. France courteously refused. The French thought Mr. Hughes' proposal one-sided and illogical because in the same address he announced that we would treat France and her debt on a political and not a business basis. The French pointed out the relation between Germany's obligations to France and those of France to us.

America Must Face Facts

Until we are prepared as a people and as a Government to face the facts, that we must deal with the Allied debts in much the same way that we expect the Allies to deal with the obligations to them, we cannot be much use in the European situation.

Do we prefer to pay the price of increasing isolation or that of cooperation with Europe? Ex-Governor Lowden of Illinois, says that the price of isolation is 30 per cent of our wheat fields turned back to prairie, 20 per cent of our corn fields turned back, 50 per cent of our cotton fields turned back into southern forests and our commercial life completely disorganized and in large part destroyed. This is the price of isolation which, if you like, you may pay. The alternative is international cooperation, with the United States assuming some measure of responsibility for peace and order. This is the simple question facing us to-day. We are running away from it rather than deciding it.

The question is, shall we stand aside and offer elaborate explanations why any specific proposal cannot succeed or shall we take a chance, dare to say to our people some things they do not like, and assume on the part of Americans an intelligent, sympathetic and a generous, but particularly a courageous attitude toward Europe. Courage seems to me the one thing now-a-days which matters most.

With New York Farmers

Winter Meetings are Formulating Firm Farm Opinion

THE following resolution was passed at the regular monthly meeting of the directors of the Dutchess Farm Bureau Association, held January 27:

WHEREAS, The farmers and farm organizations of New York State endeavored for years to have laws covering work of the Department of Agriculture enacted that would protect the department from political influences; and,

WHEREAS, The agricultural laws of the State, as revised two years ago, provide for a single Commissioner of Farms and Markets with full power of control over the different bureaus; and,

WHEREAS, Under the present law, the duties and powers of the Council of Farms and Markets consist of the appointment of the Commissioner of Farms and Markets and to act in an advisory capacity; therefore, be it

Resolved, That the Dutchess County Farm Bureau Association hereby goes on record as opposing any change in the law that will lessen the powers of the Council of Farms and Markets, and that a copy of this resolution be mailed to the president of each Farm Bureau Association in the State, and also one to our Assemblymen and Senators and to Speaker MacHold of Albany.—T. E. CROSS.

J. B. PEASE DIES SUDDENLY

J. B. Pease of Gasport, Niagara County, N. Y., died of pneumonia on Sunday, February 4. His death was very sudden, as he was ill only two days. He was prominent not only in his county, but throughout the State. He was elected President of the New York State Horticultural Society at the annual meeting held January 12 and 13 at Rochester.

WESTERN NEW YORK NOTES

ALVAH H. PULVER

Pickle growers in several parts of Western New York will welcome the news of the sale of the Alart & McGuire Company's chain of plants to the Empire Pickling Works of New York City. This means that instead of idle plants for another season, contracts will be placed this spring and all the plants restored to their former activity. In this section the Alart concern operated at Wallington, Ontario, East Williamson, Palmyra, Oswego, South Bay and Walworth, with five gathering stations elsewhere. The new firm announces that a modern kraut plant will soon be built at Ontario. Another announcement of importance to the growers is that at each point where a branch is located the firm will carry a balance at the bank so that growers may be paid for cucumbers upon delivery. This should do much to revive the industry throughout this section of the State and bring back many growers who last year switched to other crops.

The Lyons Cold Storage Company, Inc., has elected officers for the year as follows: President, Charles Coffey; Vice-president, Judson E. Snyder; Secretary, Edson W. Hamm; Treasurer, Saxon B. Gavitt; directors: Charles Coffey, Charles W. Barrick, Judson E. Snyder, Saxon B. Gavitt. The company is now under contract with one of the large Chicago packing houses

to store a big shipment of meat for European account.

Fancher Growers' Cooperation Reports Big Achievements

The annual reports of the Fancher Growers' Cooperative Association, held in Hulburton, showed that association members obtained a \$5,044 increase on the tomato crop, \$500 increase on the pea crop at Fancher and \$400 increase for the pea growers at Clarendon; \$2 per ton on the 9,265 tons of tomatoes at Holley. In one locality alone the increased income on all crops amounted to \$7,396, credit for which is due the association. The total cost of the association, including incorporating, was less than one-fourth of one per cent. Directors for the new year were elected as follows: Cole Howard, Angelo Piedmonte, Geo. Chadwick, one year; John Craddock, E. E. Root, three years; Fred Hinds, John F. Piedmonte.

The Temtor Corn and Fruit Products Company of Penn Yan has been sold to the Yates Canning Company and will be operated by the new owners this season. It is planned to make the plant one for the processing of vegetables, especially peas.

Wool Pool in Livingston a Success

The Livingston County Sheep Breeders' Association pooled 31,000 pounds of wool last season, shipping from Avon and Dansville. Partial returns have been received, indicating a net return to the growers of from 5 to 10 cents a pound over price they would have received if fleeces were sold in the old way. Officers were elected for the ensuing year as follows: President, L. H. Beecher, Livonia; Vice-president, John McNaughton, Caledonia; Secretary and treasurer, George L. Peabody, Springwater; directors: E. D. Mulligan, Avon; J. G. Morris, Groveland; R. W. Beecher, Livonia; Frank Stewart, Springwater; Floyd Van Hooser, Sparta, and J. H. Whitney, York.

Plans are being rapidly developed for the reclamation of about 1,000 acres of muck land in the vicinity of Arkport and Burns, in Steuben County. The committee in charge of details consists of William Stempfel of the Steuben County Farm Bureau; Charles Gates, William Snyder, John Taylor, Bert Barnes, Clifford Wilkins and Jacob Schwing. It is proposed to put through a ditch with outlet two miles down the river from present outlet to prevent the inrush of backwater.

A certificate of incorporation for the Palmyra Creamery has been filed with the County Clerk. The concern has three directors and will have its principle office in Palmyra. Officers are as follows: President, Charles A. Hyman of Newark; Secretary and General Manager, Morris Genthner, Newark; Treasurer, Henry W. Hyman, Newark.

Warsaw League Branch Stands Firm

At the annual meeting of the Warsaw branch of the Dairymen's League officers were elected for the year as follows: President, A. G. Shumaker; Secretary and Treasurer, Floyd Arnold. Two directors were elected in place of F. M. Cook and Merrill E. Slocum. Not one member withdrew from membership in the League.

Thousands of dollars worth of celery (Continued on page 145)

Learn the truth about Fertilizer

Commercial fertilizer is not magic. It is no substitute for work, or for farming brains. It will not make a successful farmer out of a shiftless, ignorant failure. Fertilizer varies in quality like corn or tobacco or cotton, and some brands are worth more than others. Good fertilizers, like Royster's reliable old mixtures, are a godsend to good farmers who learn how to best use them to make money.

Nearly forty years experience enters into the making of the Royster mixtures, and hundreds of thousands of the country's best farmers pin their faith to this famous old brand.

For advice about the use of fertilizer, write to Farm Service Department, F. S. Royster Guano Company, Baltimore, Md.

A Question of Support

Annual Meeting Shows G-L-F Can Give Service

STRIKING the keynote of the day's session, President Webb opened the second annual meeting of the shareholders of the Coöperative G. L. F. Exchange at Syracuse, February 5, by the following statement: "The success of this Exchange depends upon the support of its members. The reports that will be presented to-day are designed to show exactly where the organization stands. Considerable study and research has been given by the directors to place your Exchange on a solid and permanent basis. The departments that have been established are now operating in a business-like manner. The goods handled are of high quality and the service commendable. We firmly believe that the shareholders of the G. L. F. Exchange can derive material benefits by patronizing their own organization."

Following President Webb, Treasurer Hitchings reported the financial condition of the Exchange. His statement showed that after all depreciations on buildings and real estate had been absorbed, the total operating deficit since organization was approximately \$47,000, a figure exceptionally low considering the newness of the organization, the tremendous competition and the general economic strain of the past few years.

Babcock Stresses Need of Volume

Calling attention to the need of a greater volume of business, H. E. Babcock, General Manager of the Exchange, stated that from the farmer's viewpoint it looked to him as though the business we had set up was right on the verge of being a great success or an absolute failure. "As it stands to-day," said Babcock, "your organization is set up to treble the volume without increasing the costs. Treble the volume and you will make a great success. You own this company, your nine directors and the management have set up these four departments and a fifth to supervise and correlate activities. All five departments are functioning as they stand today, and are just about paying their way. Treble the present volume of business and you will get cheaper seeds, cheaper feeds and dividends. Restrict the volume, and, with the same costs to be borne, you might as well wipe the whole thing out and start over again. I believe that we have worked out a service and have a line of goods that we farmers want, and if we put the proper volume through the Exchange we can get the price."

Mr. Babcock further stated: "The proper way to use the Exchange is to give your order without price. Last fall our agents followed this plan and the Exchange made good, for to-day there are being unloaded cars of G. L. F. feeds at \$10 per ton under the present market."

Throughout the afternoon session the shareholders present discussed with utter frankness and sincerity just the standing of the Exchange, what it needed, and how to gain the increased volume which seems to be the one necessary requirement for success. The program of quality commodities bought as a user wants them bought and not as some one wants to sell him was stressed over and over again, and the determination of those present to stand on such a program ought to challenge the 38,000 shareholders to renewed action and patronage.

It cost \$750,000 to put the G. L. F. Exchange into action. Like any investment, proper returns can never be expected unless the service which the Exchange can render is used to its fullest capacity.

Directors Elected

At the conclusion of Mr. Babcock's report and the discussion which followed, the election of three directors took place. George A. Kirkland of Dewittville was elected to succeed himself for a term of three years, representing the New York State Grange. In the place of J. C. Griffiths of Salamanca, Henry Burden of Cazenovia was elected to represent the Dairyman's League, and Harry L. Brown of Watertown, representing the New York

State Farm Bureau Federation, was elected to succeed himself.

Following the election of the directors, the general meeting adjourned and the new Board convened, electing the following officers for the ensuing year: President, N. F. Webb, Cortland; Vice-president, Harry L. Brown, Watertown; secretary and treasurer, Raymond C. Hitchings, Syracuse.

In the evening, the general meeting was again brought to order by President Webb calling attention to the fact that shareholders and farmers throughout the territory should become better acquainted with the men they had employed to serve them. In view of this fact, President Webb stated, it was a pleasure to announce that the complete staff of commodity department heads was present, and that he hoped the discussion relative to the service which the Exchange could render would be beneficial when talked over with the men in charge.

An Oft Debated Subject

(Continued from page 138)

would earn more in pile to be applied later than in the ground, for the soil moisture that should go to sustain the plants will be taken up by the manure. Of course only in exceptional cases does this last statement prove true, but when it does the loss is generally 100 per cent.

When I Apply It

I would never apply strawy manure previous to seeding time; when applied in late winter the spring rains and weathering will make it ordinarily pretty safe. We have one stable where shavings are used for bedding. I find less danger in using this manure late in the spring.

As a guess, I should say that sheep manure with a normal amount of bedding and for the crops you mention, could be used in quantity about 40 per cent of cow manure and would be more effective if well rotted before using.

If our friend has had experience with manures, he can I hope, read these generalities and analyse them to his good, but if not, I would fear for the results. There are so many factors—weather, manure itself, soil conditions and kind of plant that enter into a discussion of this sort, that one must have had a good deal of experience in order to make a safe interpretation, and then a year will come along and upset the supposed knowledge of a veteran and make him a child again.

Shall We Urge Our Boys To Be Farmers?

(Continued from page 134)

In 1909 he started a four year rotation. In accordance with his livestock program, he has fed a car load or thereabouts of fat cattle each winter, consequently there has been plenty of manure available. Instead of using two hundred bushels of lime when the ground showed definite lime sickness, he now uses seven-hundred pounds per acre regularly with a spreader. All the information regarding agriculture has, however, not come from lectures and observation. The reading table in the Burket home provides the most approved material to be found in the farm papers, dailies, magazines and books. They are all read too.

Speaking of the home part of the farm, there are no city homes that provide more comfort and cheer than that of the fine old brick house on the Burket farm. A hot-water furnace and bath room were installed in 1914. Hot and cold water are, of course, in use all through the house. Electric light was installed in 1919. The large lawn makes the stranger who passes by wonder who lives there and makes him wish he were well enough acquainted to stop and call. Should he be bold enough to do so, he would receive a hearty welcome, for John Burket has not only made a success of farming on that one time poor limestone farm, but he is a friend of man.—BRUCE DUNLAP, Pennsylvania.

For Every Kind of Spraying

This handy sprayer fills the bill—sprays fruit trees, gardens, flowers, shrubs, vegetables, grapes, berries. For whitewashing poultry houses, cellars, fence posts, and trees—for spraying disinfectant, fly spray, carbolic in poultry houses and stables—for washing windows, automobiles and buggies.

SMITH BANNER
No. 22
COMPRESSED AIR SPRAYER

is made right—strong, efficient and handy—designed to do the work as it should be done. No effort at all to use it. A few strokes of the pump compresses the air to discharge contents of the tank—carried on shoulder strap or by handle—handy nozzle, opens and cuts off instantly—throws long distance fine mist or coarse spray.

Ask your dealer to show you this sprayer—examine it—you will be surprised that it can be sold at so low a price—Don't accept a substitute—there are imitations but only one No. 22 Banner—insist on getting the best—most hardware and implement dealers carry them—if yours does not, write us and we will see that you are supplied. Send for free catalog of complete line.

Jersey Fruit Men Active

Making Plans to Market 1923 Peach Crop

THE Jersey Fruit Growers' Cooperative Association has plans well under way for marketing its 1923 peach crop, according to the discussion at the enthusiastic annual meeting of the cooperative at Camden, N. J., on February 2. During the 1922 shipping season the association handled nearly 115,000 bushels of peaches for its members and from that experience the cooperative is laying its plans to handle effectively an even larger production this coming year. The principal feature in the tentative plans, outlined by James E. Klahre, manager of the association, is a separate marketing policy on peaches sold by the car, from those sold in broken lots or by the motor-truck load.

It was pointed out that a highly specialized sales agency with sales contracts in markets throughout the country could very profitably handle the peaches to be sold in carlots. This plan would make available the sales force of the association for intensive work in the distribution of peaches to markets in northern New Jersey, New York and eastern Pennsylvania. The marketing policy for 1923 will shortly come up for final action by the Executive Committee, after which plans will go forward intensively.

The federation of fruit cooperatives now comprises six local units, namely: The Vineland Cooperative Association of Cumberland County, the Holly Trust Growers' and Cooperative Packing Association, the Camden Fruit Growers' Cooperative Association, the Moorestown Fruit Growers' Cooperative Association, the Riverton Fruit Growers' Cooperative and the Burlington Fruit Growers' Cooperative Association. As pointed out at the meeting, the efforts of the organization this last season helped to stabilize prices on peaches in the Philadelphia market and through such efforts proved a valuable asset for the general fruit industry of New Jersey.

The officers of the Association for the coming year are: Joseph Barton, Marlton, President; C. B. Lewis, Riverton, Vice-president; Dr. Frank App, Bridgeton, Secretary-treasurer. These three, together with Bertram Gillette of Vineland, George Reid of Mount Holly and Byron Roberts of Moorestown comprise the Executive Committee. In addition to the members of the Executive Committee, the following make up the Board of Directors: Henry Albertson of Burlington, Arthur L. Ritchie of Riverton, C. L. Andrews of Moorestown and H. H. Bell of Mt. Ephraim.

Pruning Demonstration Draws Crowds

Monmouth County Agent, Ellwood Douglass, held one of the largest pruning demonstrations in New Jersey on February 2 on the farms of W. B. Conover at Middleton and John Tansey at Matawan. Over 80 people turned out in response to his invitation to get the latest information on pruning practices. The gathering was said by A. F. Mason, Extension Specialist in Horticulture at the New Jersey State College, to be next to the largest attendance at any pruning demonstration in the State.

County Agent Douglass and Specialist Mason brought out the three generally used types of pruning—the open head, the modified central leader and the central leader—and showed on just which varieties and under which conditions each of these was best. One of the main points emphasized was that the pruner should leave as many low branches on a tree as possible to aid in spraying and picking, and to give the most first-class fruit. In this connection the growers were told that there is not much ground for the belief among some fruit men that they must have a high tree in order to get necessary cultivation, for with modern orchard machinery a grower can get as close to the trunk as is desirable.

Caution was emphasized against excess cutting of the fruit spurs and small branches on which the crop is borne; also the tendency among some men to leave insufficient air and sunlight space around the fruiting limbs because of the fear that they will cut

out too much. The constant stream of questions fired at the County Agent and Fruit Specialist indicated that this type of demonstration, which has been more widely held than any other except the culling demonstration, is still popular with the central New Jersey fruit growers.

Tomato Men Perfecting Organization

Answering a call of the Burlington County Tomato Growers' Association, representatives of the tomato-growing counties in southern and central New Jersey recently met at Mount Holly, N. J., to discuss plans for the formation of a permanent marketing organization. The formation of a cooperative tomato marketing association has been under discussion for some time, such counties as Burlington, Cumberland, Salem, Gloucester, Camden and Mercer being interested. The Executive Committee named below, one from each county in the order just listed, was elected to comprise a group which would work in conjunction with the State Federation of County Boards of Agriculture regarding details and expenses of forming a permanent organization. This committee is composed of Charles A. Collins of Moorestown, Leslie Platts of Bridgeton, H. N. Fogg of Hancock's Bridge, J. B. Stratten of Mt. Royal, Frank W. Shivers of Merchantville and A. E. Young of Trenton. Dr. Frank App of Bridgeton will serve as secretary of the above committee.

Looking ahead to the coming season considerable discussion centered at the meeting around the possibility of raising the price of canhouse tomatoes this year. It was the sense of the meeting that an effective marketing organization could not be completed in time to function in this regard for the 1923 crop.

Egg Cooperative Shows Results

According to a careful survey of comparative prices on Pacific Coast eggs and those from New Jersey and other nearby points, Herman B. Walker, manager of the Atlantic Coast Poultry Producers' Association, finds that New Jersey eggs in 1922 commanded a premium over Western offerings on the New York market. His investigations show that in 1921 the prestige of nearby eggs over those from the Pacific Coast was to the tune of 0.3 cents per dozen, while the difference of New Jersey eggs over Pacific Coast in that year was nil. During 1922, however, the favor of nearby eggs gave them an advantage of 2.4 cents per dozen, while New Jersey white eggs as marketed through the association sold at a premium of 6.7 cents per dozen. These were the comparative average top quotations for Pacific Coast, New Jersey and other nearby white extras.

When the Association established its own salesroom and offices in New York City last June, it discontinued its previous policy of grading and candling all the eggs of members in local packing houses. When the work first started, four and five grades of white eggs were packed, and all of the cases were new cottonwood cases, with new white fillers and flats. During the last half of 1922 and up to the present time, the candling of eggs has been discontinued except for the retail trade willing to pay a premium for candled eggs. The number of grades was cut down to three during the fall and two during the rest of the year. The expensive new cases and white fillers were discontinued and two of the three local packing houses were closed except the one at Toms River, N. J., which was retained as a receiving station only, except during the summer-resort season. With simple rules for grading and packing and with attention to grading of eggs on the part of members, the packing department in New York City is mainly for inspection of eggs on arrival. These changes in policy have enhanced the efforts of the association and made possible the operation of the association at less cost to members.

Pull the mulch from the strawberries as soon as freezing days have passed. This gives the plants a chance to shoot right up and bear early fruit.

Shall I Buy or Hatch?

What Baby Chick Experiences Have Taught Us

It is only a few years since we knew practically nothing of the baby chick industry. It was comparatively slow in starting. But when it did start, it grew by leaps and bounds and has not ceased growing, or even slackened its pace. There will be new hatcheries each year, and each year some will pass out of existence. What has been true of other industries is true of the baby chick industry. Auto factories, radio companies, baby chick hatcheries sprang up like mushrooms after a warm rain. Many factors enter into the cause of hatcheries ceasing business operation, but there are standard hatcheries to-day just as there are standard companies manufacturing plows, separators and typewriters.

A Great Convenience

We find many advising the use of hens as means of incubation rather than purchasing chicks. Each one should exercise good, sound judgment when deciding, but it surely is an advantage to get a bunch of husky chicks from a reliable firm and start them on a brooder, over and above the trouble occasioned by fussing with a lot of troublesome hens. I tried it and found the chicks from the hatchery far more convenient.

An additional bunch of chicks may be obtained from the hatchery to swell the number when the incubator batch comes off. As a rule, when a 50 per cent hatch is obtained, it is considered pretty good. An incubator holding 250 eggs, after testing out infertile eggs and counting those not hatching, rarely brings over 150 chicks. Usually the brooder capacity of a small poultry business can handle more birds than this.

Here the hatchery chicks come in handy, for an order may arrive the day the hatch comes off. If you like to use hens or an incubator, use them, by all means. It is a grand thing that we have a right to do as we please in such matters, but if you like to raise chicks and detest the hatching part of it, then thank Providence that the baby chick industry has come to stay.

Some Personal Experiences Years Ago

The first experience we had with the purchase of baby chicks was some years ago, when we purchased a hundred R. I. Red baby chicks. We raised them with pretty fair success. They were, to be sure, pure-bred R. I. Reds, although we never knew from what flock the eggs came. We always doubted seriously the pure-bred part, for they did not show it very strongly.

Following the R. I. Red experience, we obtained a start with Anconas. From a near-by breeder we obtained eggs from his pure-bred flock of Anconas. These were set under hens, hatching out about 175 chicks. Of these we raised about 155, losing some by accident, but none through disease. This man's flock was free of disease. We needed more chicks to grow the desired number of pullets, and could not depend on hens to hatch them, having no incubator at that time. So we ordered 200 Ancona chicks from a reliable firm. They treated us squarely, although we lost out to a certain extent.

Immediately after arrival the chicks began dying and continued till less than a hundred remained. Three other parties living near us purchased chicks from the same hatchery, and had expe-

By W. E. FARVER

perience identical with ours. We hardly knew what course to pursue, so we enlisted the aid of our county agent. He was not certain whether it was bacillary white diarrhoea, or not, but expressed the opinion that the chicks lingered longer than if it were the diarrhoea. He advised a post-mortem examination to determine the nature of the disease.

Several afflicted chicks were shipped to the State College. The report read "coccidiosis," a bowel disease of poultry. We never had any of this trouble before, nor did the chicks hatched from the eggs obtained from our neighbor-breeder. This pretty well convinced us that the chicks received from the hatchery brought it along. We had the same trouble later on when using the eggs from these fowls for hatching. The other three parties who bought chicks from the same place, and all Anconas, too, had the same disease in their chicks, and with disastrous experience, too. This has firmly convinced us that the flock of Anconas laying the eggs used by the hatchery to produce these chicks was infected with coccidiosis.

Authorities at Columbus advised us that mature fowls may have this disease, disseminating it in the droppings, and yet not showing any evil effects therefrom. Also, that the germ may be on the shell, and the chicks pecking at the shells may contract it before they leave the incubator. Some of our chicks have shown symptoms of it before we took them out of the incubator.

It appears to us that a law requiring examination and testing, or licensing the certification of flocks from which eggs are used by hatcheries or otherwise sold for hatching purposes. This would avoid much needless distribution of disease, I believe. It is possible to detect bacillary white diarrhoea in old stock by making tests. Enforced tests of this kind is the only way in which bacillary white diarrhoea will ever be eradicated. Like tests and examinations would help much in other diseases.

Where One Fault Lies

A practice of some proprietors of hatcheries is to go out and buy eggs from any one who happens to have a flock that looks like good stock regardless of what the condition or breeding is. Before me is the following advertisement: "WANTED.....The..... Hatchery pays a premium for eggs from all varieties of unmixed flocks. Send name and address....." Is there any likelihood that any stock of high-grade qualities will be secured at this hatchery? Another incident that happened here not long ago was this: An Ancona breeder living near by was approached by the proprietor of a hatchery for Ancona eggs for hatching. The breeder had not yet made up his breeding pens and had a few Brown Leghorns in the flock. He explained this to the hatchery proprietor, but stated he would remove the Leghorns. The proprietor replied, "Oh, that don't matter." Had this Ancona breeder been as careless and dishonest as the hatchery proprietor apparently was, the purchasers of those baby chicks would have suffered.

There is a class of poultry keepers who are not particular whether chicks are pure bred or not. To these the careless and dishonest hatchery proprietor works little harm, but he may

be approached for pure-bred chicks by parties who do care whether chicks are pure-bred or mongrel stock. These dishonest proprietor catches and they are thrown back at least a year in their poultry improvement efforts.

Where I Would Do Business

In many States there are hatcheries of high reputation and standing whose breeding pens are well selected and conducted in cooperation with the State Experiment Stations. Of course there are many other hatcheries which are perfectly reliable and where we may obtain stock of the very best kind. The point which should not be passed over lightly, is that the hatcheries whose breeding pens are conducted in cooperation with the experiment stations are to be depended upon for supplying chicks that are what they are recommended to be.

These hatcheries and all others that maintain special breeding pens of high quality are reliable. So far as the business dealings of others is concerned I do not question their reliability. However, I do seriously question the practice of picking up eggs here, there and everywhere just to fill the incubators. This and the looseness in scattering poultry diseases, should cease. We have had a number of chances this year of selling our eggs to hatcheries this season, but owing to the fact that we have had trouble with coccidiosis we decided to not do so unless we can once rid our flock of this trouble, or build up another that is free of it.

The Kind to Beware Of

It may not be out of place to say that we should be very cautious about ordering chicks from fly-by-night concerns. The case of the notorious King Hatchery of Cleveland last year is still fresh in our minds and need not be reviewed here, except to mention that if we had the money that the King Hatchery obtained from our county we could purchase a poultry farm of good size and make a mighty fine down payment, if not pay for the entire farm. So as a closing remark, permit us to say that it will pay you to do a little research work before you order chicks. Learn from those who have had successful dealings with reliable hatcheries what their experience has been. Or have your county agent inquire from your State experiment station concerning reliable hatcheries. There are many of them all over the country. It surely pays to "look before you leap" when contemplating the purchase of baby chicks.

With New York Farmers

(Continued from page 141)

in storage along the Ontario division of the New York Central have been lost because of a shortage of refrigerator cars. Many have estimated the shortage as high as 250 to 300 cars. Growers have for some time in the past experienced more difficulty in getting cars on the New York Central lines than on the Pennsylvania system. Partly to obviate this, a large cold storage was built at Wallington on the Pennsylvania road last year, and before the plant was fully completed all space had been contracted for, so great is the call for storage facilities on the Pennsylvania system.

The new officers of the New York Canning Crops Cooperative Association are as follows: President, C. A. Rogers, Bergen; Vice-president, Frank Brophel, Geneseo; Secretary and General Manager, Thomas Wright, Webster; Treasurer, John H. Morgan, Greece; new members of the Executive Committee: John Morgan, Greece; George Rowe, Knowlesville; George Burrill, Holcomb, and H. E. Whitmore, Avon.

Williamson Growers Reestablish Fellowship

For several years the Williamson Vegetable Growers' Association employed a graduate student of Cornell University for the study of some of the disease problems arising on their muckland crops. Last year question arose in the minds of some as to whether the undertaking was worth the cost or not. It was accordingly dropped. At a recent meeting the growers decided unanimously to re-establish the fellowship. They found that a man well trained in disease control was able to help them greatly by timely suggestion and demonstration.

POULTRY RATIONS

Known Ingredients of Known Quality in Known Proportions

THE rations are mixed according to formulas approved by the poultry feeding specialists at the colleges of agriculture in the territory served by the G. L. F. Study the formulas and you will find—

1. A larger variety of ingredients than is usually available in your locality.
2. The quality of the ingredients and the pounds of each ingredient used are stated.
3. Each ration is high in digestible nutrients and the fiber content is low.
4. Dried milks are used and the animal proteins are high.

Feed G. L. F. Rations and you will know just what your birds are eating

A Rod and Up

Why Peerless Fence Satisfies
PEERLESS WIRE & FENCE CO., Cleveland, O.
Having a general acquaintance with the desirability of Peerless Fence and the well managed company, I can highly recommend it as the best all-purpose fence in this country. I know of fence still in use which has been up for 20 years.
Yours truly,
Henry W. Stevens,
Tecumseh, Mich.

Peerless FENCE

Now Sold Direct from Factory
Our New Plan of selling the famous Peerless Fence direct from three big factories is "glad news" for farmers. It means the cutting out of all "in-between" profits and a slash in prices that will save farmers thousands and thousands of dollars. Now you can get this well-known, high-standard fence, also gates, steel posts, barb wire, smooth wire, paints and roofings, at the

Lowest Prices Ever Quoted
on Peerless Fence, Gates, Roofing and Paints. Don't fail to send at once for our New, Direct-from-Factory Peerless Catalog—over 100 pages of sensational bargains—prices that will be a glad surprise to you. For example:

Peerless Farm Fence, per rod, 17 cts and up	
Steel Farm Gates, each	\$3.65
Steel Posts, each	22 cts
Barb Wire, 30 rod spool	\$2.47
Lawn Fence, per ft.	7 cts
Paint, per gallon	\$1.19
Roofing, 100 sq. feet, roll	\$1.25

And so on, throughout this great money saving book, our prices will be a revelation to you. The same, old time, high quality—the prices cut to rock bottom through our change in selling direct from factory to you.

Shall I Test?

TB Eradication From a Cattle Owner's Viewpoint

IWELL remember the first time that I personally realized that there was a tuberculosis question. I had bought three Guernsey two-year-olds for \$600—mostly borrowed money—and in my greenness and excitement I had forgotten to require that they be tuberculin tested. They were well bought and soon there came an offer of \$900 for the three, with the stipulation that they first pass the tuberculin test.

I accepted the offer at chore time one night, and went to bed a happy boy to awaken along in the midnight hours with the terrible thought that perhaps my heifers would react. All night long I wrestled with that fear; a half dozen times I decided that I would never take the chance, only to whip myself into line again.

The next day the veterinarian came. I did not let him out of my sight for a minute. I slept with him on a pile of hay in the barn. I held the lantern for the readings. When the final temperature was recorded I was a nervous and physical wreck—but I had acquired a point of view toward the tuberculin

By H. E. BABCOCK

Our best purebred markets are outside the State. All reliable public sales require a tested animal, and some guarantee of 60-day retest; another reason for testing. Finally, so many purebred owners are striving for clean herds there is little hope of selling untested purebreds even at private treaty.

It is of little use to breed purebred animals for milk alone, so under present conditions I believe that any purebred owner must test his herd or go out of business. We have tested our purebreds. We found reactors. We now have clean herds. The testing cost us two years breeding progress and lost us some money, but we are glad we did it. *It will pay in the long run!*

Not Practical to Test All Grade Herds

On farms with grade herds T. B. testing has not been practical in all cases. It is not with us.

One farm is located in a valley where, it is safe to say, 50 per cent of the cattle are tubercular. To test that herd would mean to lose it, and the income from it. Indemnities are too

What is more discouraging than to spend years, perhaps a life time, building up a fine herd, only to find that they all react?

test which has never left me. It is the point of view of the man whose business is threatened; who awakens in the dead of night to toss and sweat over the problem of what to do with his herd. If, therefore, I seem careless of the plans of governments and make light of statistics and the like, I hope it will not be misunderstood. I am looking at the problem from the angle of the man who owns the cattle.

Shall I Test?

As a cattle owner living in New York State this winter of 1923 I am face to face, if I have not already decided the question, with the problem: Shall I, or shall I not submit my herd to the tuberculin test? Probably my thoughts will be colored by the conditions under which I farm. If I am the owner of purebred cattle I am constantly up against the demand for tuberculin tested animals. I cannot ship my animals outside of the State unless they are tuberculin tested, nor can I put them in any of the better public sales. In fact, unless I am willing to test, my purebred market is practically destroyed. On the other hand, if I am the owner of a grade herd, the tuberculin test has as yet made but little impression on the price of my cattle.

It happens that since I tested those three Guernsey heifers—by the way, they did not react—I have acquired the management of several farms and in the course of operating these farms I have tested over six hundred head of cattle. As these farms stand to-day they are typical of several conditions that dairy cattle owners face, and I shall therefore answer the T. B. test question as I have answered it in the management of these farms.

The Case of the Purebred Farm

On two farms we have purebred cattle. There seems to be but one answer to the test question on these farms. Yes, we shall test. Unless animals have passed a clean test they cannot be shipped into other States.

low and too slow to use in buying replacements. Furthermore, where could we go to buy clean replacements?

There are hundreds of dairymen in like situations. The milk from their farms is pasteurized. There is but little menace to the health of any except the young members of the farm family. A private test of one or two cows safeguards that. These badly infected herds of grade cattle should be left to the last; until there are plenty of clean replacements available and until the whole area can be cleaned up at once. *It does not pay to test them now.*

Another of our farms, stocked with grade cattle, is located in one of those rare sections where the T. B. test is required by the milk market. Here, of course, we test. We get more for our milk. *It pays.*

On still another farm we have no dairy. We just keep a few so-called cows to eat up the roughage and make a little manure. Here we have not tested. I do not see why we should ever do so. There are hundreds of farms like this one.

Test When It Pays

Summarizing then, our experience in farm management has taught us to tuberculin test cows when it pays to do so. With purebred cattle it pays; when special milk markets are available it pays; when we raise grades for sale it may pay. In the operation of an ordinary grade herd, however, it does not yet pay to test and it is likely to be years before it will. In fact, testing is a real handicap.

So much for our own point of view. We have looked at the question in the light of practical experience. It is only fair that the varying conditions of cattle owners be considered when plans for bovine tuberculosis eradication are made. I intend to keep them to the fore in this series. The next article will deal with the fundamentals of the accredited herd plan as learned by experience with it.

CATTLE BREEDERS

To Withdraw or Not?

UNDER the terms of the contract between dairy farmers and the Dairymen's League Association, Inc., this month of February is the time when farmers may, after observing certain regulations, withdraw from the organization. Some will do this. I am one of those who will not, and I stand ready to give a reason why I shall not.

Memory fails me about some things, but it is not so short that I have forgotten some things that took place before we had any League to stand for us in the matter of selling our milk. Then we had to take anything that was offered us for our milk—we had no voice in the matter at all. If we preferred to take our milk out and care for it ourselves, we could do so. I did that one year. I made some good butter, but the local market was overstocked. I sent three tubs to New York to be sold on commission, and I got back less than one dollar for three tubs, 69 cents, to be exact, as my memory serves me. The man I sent to was pronounced a bankrupt. My experience with the old way of individual selling was the same as that of all my neighbors. We could take the price offered, or do the other thing.

It is because I remember these things, and because I am just as sure as that I live that if the Dairymen's League Cooperative Association should by any manner of means stop doing business, we would be right back where we were in those old days, that I shall not withdraw from the organization, and I should be very sorry to see any of my neighbors do so. If the Cooperative is undermined by those who have been benefited by it and whose only salvation it is from loss and perhaps ruin, if we do not stand by it now we will be the most ungrateful of all men. Not only so, we will be untrue to our own best interests, false to the homes we love so well and really financial suicides. So I am going to stick, and stick hard. I see no better thing to do. —E. L. V.

H. D. (DAN) WARNER PASSES AWAY

On January 29 occurred the death of Mr. H. D. Warner of Pawling, N. Y., at the age of 64 years. Mr. Warner had been in ill health for nearly a year and the end was not unexpected.

Level-headed, conservative, a man of excellent judgment and broad vision, Dan Warner has exerted a positive influence for the betterment of the Holstein-Friesian breed. For nearly forty years, and up to the time of his death, he was manager of the Dutcher Estate, Maplecroft Farms, Pawling, N. Y. Under his care were developed Pauline Paul, with her authenticated butter record of 1,153 lbs. 15 3/4 oz. in a year, the first cow of any breed to approach this figure, and De Kol 2d, with her 33-lb. authenticated four-year-old record, the world's record for age at that time. Under Mr. Warner's care, De Kol 2d produced the first seven of her twelve calves. These were De Kol 2d's Paul De Kol, De Kol 2d's Netherland, De Kol 2d's Alban, and De Kol 2d's Prince, and the three daughters, De Kol 2d's Queen, Netherland De Kol and Mildred De Kol. A mere recital of the names of these animals, particularly the four sons, is sufficient to establish the fact of his skill as a breeder.

When a man like Dan Warner passes on, his taking away is not alone felt by his relatives and close friends, but the whole community suffers an irreparable loss. Always interested in the community in which he had lived for nearly forty years, Mr. Warner never failed to help whenever possible. Throughout the whole southeastern section of the State, his friendly assistance was an inspiration to everyone with whom he came in contact. No show, or fair, or even meeting where Holsteins were discussed was held in eastern New York that his counsel was not sought and as willingly given. A priceless heritage he leaves in the memories his family and friends will forever cherish. He is survived by his wife, three daughters, and one son, also by two sisters, and his father, now in his ninety-third year.

The secret of success in live stock endeavor or any other farm enterprise, for that matter, is the production of exactly what the market calls for.

When Snow Lies Deep

WHEN Jack Frost has made summer pastures a thing of the past; in bleak mid-winter when grain prices soar, then you will have the "bank account feeling" that a full Unadilla Silo offers.

You'll appreciate its perfect air-tight, water-tight and frost-repelling construction that preserves every pound of green corn put into it; you'll know as thousands of others know, that it retains valuable juices and contains no molding or rotten silage to throw away.

Easy to get into and out of; easy to push silage out at door level, because Unadilla Silos are built for permanence and convenience and safety. There's no silo with a front like the Unadilla; its face, like a man's, speaks of its good character.

Send for Unadilla Catalogue and early order discount offer.

THIS IS YOUR MARKET PLACE

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week.

Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest.

We positively guarantee to our readers fair and honest treatment in dealing with our advertisers.

We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised.

To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

Don't Buy "Wildcats"

Can You Afford to Speculate?

EVERY week brings dozens of letters to American Agriculturist asking advice relative to investments. Apparently there are as many wildcat schemes being floated as ever. Farmers cannot afford to take these risks. H. E. Cook recently made the remark that if you have money to invest, why not invest it in your own business—a good idea.

But many wish to have securities to fall back on in later life. If you wish to invest—then invest, do not speculate. Good securities do not pay excessive dividends. You never could and never will get "something for nothing."

CHARGE TO PROFIT AND LOSS

Financial Department:—About two years ago I bought 100 shares in the Union Oil of Texas. A year later they wanted me to transfer it into the Rose Oil Company, which I did by sending my certificate and \$50. Now they want me to transfer it into the Petroleum Producers Association (sending 25 per cent of the face value of my holdings). This company claims they are on a paying dividend basis. If I do not accept this they say that my certificate in the Rose Oil Company is worthless.—R. E. C., New York.

You might as well consider your Rose Oil worthless. Certainly it won't do you any good to send more money to put into the Petroleum Producers Association. The head of that association is the same Dr. Cook that created such a stir some years ago by announcing he had discovered the North Pole. As a matter of fact we have more faith in his Arctic adventures than in his oil enterprise.

Financial Department:—In 1920 I bought 100 shares of stock in Texas United Oil. In 1921 I was informed that the company had failed, but a banking company in Philadelphia gave notice that they were taking over the company and were going to try to put it on its feet, as it had failed on account of the raceability of its president. An assessment was made of 8 cents per share which amount I paid. I have never heard anything more of it since, also I have lost the name of the banking company. Can you find out anything about this matter?—E. H. G., Pennsylvania.

We fear you will have to charge the money you put into this proposition to profit and loss. The stock is offered at 10 cents a share, but no one is ready to buy it at any price. Some day farmers will learn to leave oil stock alone.

INVEST—DON'T SPECULATE

Financial Department:—What is your opinion on the Greenwich Service Corporation (circular attached) 358 Fifth Avenue, New York City, in a general way as to their reliability to be entrusted with handling of one's money along the lines they are suggesting and their particular offer of Atlantic Fruit?—C. D. P., New York.

Our earnest advice is to have nothing to do with this proposition. If you want to speculate and have money to lose, you can buy Atlantic Fruit bonds for yourself. We advise you not to, but you, of course, can take a chance with your own money if you see fit. Incidentally in December the bond the Greenwich Service Corporation has offered to sell you for \$360 sold on the Stock Exchange for \$280. Of course, it is perfectly possible that the price will go higher than \$360, and so you will make a profit and it is also perfectly possible the price will go lower than \$360, and then you will have a loss. There is no crime in speculation if you are perfectly able to lose, and if when you have lost what seems sufficient to you, you will stop. That is all there is to it. But in any case speculate for yourself and not through any service corporation, if speculate you must.

GOOD INVESTMENTS FOR FARMERS

Financial Department:—Can you advise me as to some good and safe investments that you think are perfectly safe, paying a rate of interest not less than 5 per cent, such as public utilities or something that pays dividends semi-annually, quarterly or yearly?—J. P. M., Delaware.

There are many good sound investments paying 5 per cent or better. Such a preferred stock as American Bank Note, which is of \$50 par and pays \$3 a year in dividends and sells for about 55 to yield 5½ per cent is an example. We think you would be

entirely safe in buying this stock which is listed on the New York Stock Exchange. Another high-grade investment, in our opinion, is Jones & Laughlin Steel preferred, which pays \$7 annually and sells for about 109 and yields 6.4 per cent. This also is listed on the Exchange and so has a good market.

Financial Department:—What can you tell me about investing money from \$10,000 to \$20,000 in tax free investments. I know of the Government bond and war saving stamps and war bonds, but is there any that is safe and pays 4½ or 5 per cent?—F. W. L., New York.

Why do you want tax free securities? Unless you are subject to high surtaxes there is no object in buying tax exempt bonds. Probably the best, if you insist on having that class, are the bonds of the Federal Land Banks which yield 4½ to 4¾ per cent.

Financial Department:—I am a farmer in the coal, oil and gas belt of W. Va. There are wonderful opportunities offered here on paper, for investors, but I am on the ground and want none of them. I want first mortgage real estate paper, preferably on farms, but securities of this kind are scarce here. As I cannot be there to look after the business myself, what I want is a safe conservative Gilt-Edged Real Estate broker to look after this for me. Who is he and what is his address? What do you think of Perkins & Co., Real Estate Brokers of Lawrence, Kansas?—J. B. S., West Virginia.

The best investment for you are the Federal Land Bank bonds. These are secured by first mortgage on farm property and the Federal Land Banks answer to your description of a safe, conservative, gilt-edged investment.

Financial Department:—Can you give me any information concerning the Calvert Mortgage Company, Baltimore, issuing 2 year 6 per cent certificates?—C. W., New York.

We think these certificates are good investments.

CRANE SILOS

Giants in Strength

When you build a new silo or rebuild your old one, make it a Crane—the strongest as well as handsomest silo made. Its three wall construction gives perfect silage protection. Outside the wall of upright staves is an air-tight, water-proof, frost-defying inner wall of Silafelt. Outside of both is the spiral Crainelox covering, of giant strength—no hoops, lugs, weak spots, repairs, but permanent protection for every inch of wall.

You can rebuild an old stave silo into a Crane, at half the cost of a new silo.

Write for beautifully illustrated catalog and special discount on early orders. Agents wanted.

CRANE SILO CO., Inc.
Box 120 Norwich, N. Y.

STRAWBERRY PLANTS

Hardy Northern Grown Plants, direct from the grower, right from the heart of the berry section of the State. Buy direct and save middleman's profit. Get fresh dug plants at grower's prices. Ten best varieties. Our slogan—Honesty—Quality—Reliability. Catalogue free.

HEYWOOD AND KLIMOVICH
Central Square, N. Y.

FORD'S SEED CATALOG
Will Interest You

It is so different from all others. It tells of Ford's Soybean Seeds, Plants, Trees, Bulbs, which customers say make **Best and Biggest Crops**. Reasonable prices, high vitality and purity. Satisfaction guaranteed or money back. Write today for your copy. If friends are interested, send their names and addresses.

FORD SEED COMPANY, Box 2, Ravenna, Ohio

If you wish to invest safely

Buy Federal Farm Loan Bonds

If you have any surplus funds, invest them in Federal Farm Loan Bonds. They will earn you 4½% interest, payable twice yearly. You can sell them at any time if desired, or your banker will gladly accept them as collateral for a loan. There is no safer investment. Your money is secured by the pledge of first mortgages on Eastern farms double the amount of the loans. Prompt payment of principal and interest is guaranteed by all twelve Federal Land Banks. You can buy a Federal Farm Loan Bond for as little as \$40.00. Write for particulars.

The FEDERAL LAND BANK of SPRINGFIELD, MASS.
Serving New England, New York and New Jersey

A COMPLETE POULTRY LIBRARY

Following are five books on the poultry industry that cover the subject not only in a scientific, but popular and practical manner. It deals thoroughly with every phase of the poultry business. This set of books should be in every man's living room or library, who has a poultry business of any size at all.

MATING AND BREEDING OF POULTRY

By Harry M. Lamon and Robert R. Slocum. This book may be properly termed the "Key to the Standard." It describes in detail the proper matings to secure birds that approach the ideal. Every follower of poultry shows should have this book. \$2.50

POULTRY BREEDING AND MANAGEMENT

By James Dryden. A very recent book written for the man or woman on the farm or in the poultry business who is interested primarily in making poultry pay. \$2.00

POULTRY FEEDS AND FEEDING

By Harry M. Lamon and Alfred R. Lee. A book just off the press that covers the subject of economical and proper feeding from the very standards. The authorities are practical and expert poultrymen. \$1.75

DUCKS AND GESE

By Harry M. Lamon and Robert R. Slocum. A most complete, practical and helpful book on this popular subject ever written. This is the most recent publication on the subject and covers every phase of it. \$2.00

TURKEY RAISING

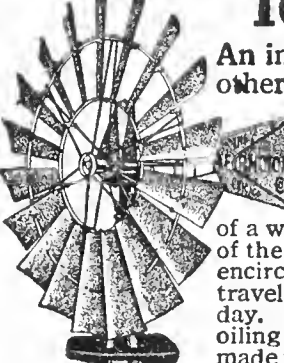

By Harry M. Lamon and Robert R. Slocum. No turkey raiser either experienced or beginner, can afford to be without this new book on the subject from the pens of two of the foremost poultry authorities in the United States. A complete treatise on the subject. \$1.75

AMERICAN AGRICULTURIST, Inc.

461 Fourth Avenue, New York City

4 TIMES Around the World with ONE OILING

100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The Auto-oiled Aermotor after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting windmill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

Kansas City Minneapolis Oakland

The Valley of the Giants—By Peter B. Kyne

NOT the least of the trials which formed Shirley Sumner's character was pride. Hers was the pride of lineage, of womanhood, of an assured station in life, combined with that other pride which is perhaps best expressed in the terse phrase "a dead game sport." Unlike her precious relative, Shirley had a wonderfully balanced sense of the eternal fitness of things, her code of honor resembled that of a very gallant gentleman. She could love well and hate well.

A careful analysis of Shirley's feelings toward Bryce Cardigan after the incident in Pennington's woods, had showed her that under more propitious circumstances she might have fallen in love with that tempestuous young man of many lovable and manly qualities. As an offset to the credit side, however, there appeared certain debits in the consideration of which Shirley always lost her temper and was immediately quite certain she loathed the unfortunate man.

He had been an honored and (for aught Shirley knew to the contrary) welcome guest in the Pennington home one night, and the following day had assaulted his host, committed bodily injuries upon the latter's employees for little or no reason, declared his unfaltering enmity to her nearest and best-loved relative, and in the next breath had had the insolence to prate of his respect and admiration for her. Indeed, Shirley recalled that the extraordinary fellow had been forced rather abruptly to check himself in order to avoid a fervid declaration of love! And all of this under the protection of a double-bitted axe, one eye on her and the other on his enemies.

However, all of these grave crimes were really insignificant compared with his crowning offense. Shirley had informed Bryce that she loathed him—whereat he had looked her over coolly, grinned a little, and declined to believe her! Then fate had decreed Bryce Cardigan an opportunity to save her and her uncle from certain and horrible death, thus placing upon Shirley an obligation as irritating to acknowledge as it was futile to attempt to reciprocate.

That was where the shoe pinched. Forced to acknowledge her indebtedness, she had telephoned him and purposely left ajar the door to their former friendly relations.

Monstrous! He had seen the open door and deliberately slammed it in her face. Luckily she had heard, unsuspected by him, the soliloquy wherein he showed the distress with which he abdicated—which knowledge was all that deterred her from despising him with the fervor of a woman scorned.

The fascination which a lighted candle holds for a moth is well known. In yielding one day to a desire to visit the Valley of the Giants, Shirley had been thinking of a certain blackberry pie, which naturally induced reflection on Bryce Cardigan and reminded Shirley of her first visit to the Giants under the escort of a boy in knickerbockers. She wondered if the years had changed it all and decided that there could not possibly be any harm in indulging a very natural curiosity to visit and investigate.

Her meeting with Moira McTavish that day, and the subsequent friendship, renewed all her old apprehensions. On the assumption that Shirley and Bryce were practically strangers to each other, Moira did not hesitate to mention Bryce very frequently. To her he was the one human being in the world utterly worth while. Moira described Bryce in minute detail and related little unconscious acts of kindness, thoughtfulness, or humor performed by Bryce—his devotion to his father, to the Cardigan employees, his ability, his industry, his marvellous taste in neckwear. And presently, little by little, Shirley's resentment faded, and in her heart was born a hope that some day she would meet Bryce Cardigan on the street and that he would pause, lift his hat, smile at her his compelling smile, and forthwith proceed to bully her into being friendly and forgiving.

TO this state of mind had Shirley Sumner attained at the time old John Cardigan decided to sell his Valley of the Giants.

Shirley had learned from the Colonel the history of old man Cardigan and his Valley of the Giants, or as the townspeople called it, Cardigan's Redwoods. Therefore she was familiar with its importance to the Laguna Grande Lumber Company, since, while that quarter-section remained the property of John Cardigan, two thousand five hundred acres of splendid timber were rendered inaccessible. Her uncle had explained that ultimately this would mean the tying up of some two million dollars, and inasmuch as the Colonel never figured less than five per cent return on anything, he was in this instance facing a net loss of one hundred thousand dollars for each year obstinate John Cardigan retained that quarter-section.

"I'd gladly give him a hundred thousand and let him keep a couple of acres surrounding his wife's grave," the Colonel had complained bitterly to her. "I've offered him that price a score of times, and he tells me blandly the property isn't for sale. Well, he who laughs last laughs best, and if I can't get that quarter-section by paying more than ten times what it's worth in the open market, I'll get it some other way, if it costs me a million."

"How?" Shirley had queried at the time.

"Never mind, my dear," he had answered darkly. "You wouldn't understand if I told you. I'll have to put up a deal of money, one way or another, but in the end I'll get it all back with interest—and Cardigan's Redwoods! I expect to do business with his executor or his receiver within a year."

Shirley had been present the night John Cardigan, brought to bay at last, had telephoned Pennington. The cruel triumph in the Colonel's handsome face had been too apparent for the girl to mistake; recalling her conversation with him, she realized now that a crisis had come in the affairs of the Cardigans, and across her vision there flashed again the vision of Bryce Cardigan's homecoming—of a tall old man with his trembling arms clasped around his boy, with grizzled cheek laid against his son's, as one who, seeking comfort through bitter years, at length had found it.

PRESENTLY another thought came to Shirley. She had given Bryce his opportunity to be friendly, and he had chosen to ignore her though sorely against his will. In Sequoia, Bryce Cardigan was regarded as the heir to the first timber-king, but Shirley knew now that, Bryce Cardigan bade fair to wear a tinsel crown. Was it this knowledge that had led him to avoid her?

"I wonder," she mused. "He's proud. Perhaps if he were secure in his business affairs—Ah, yes! Poor boy! He was desperate for fifty thousand dollars!" Her heart swelled. "Oh, Bryce," she murmured, "I think I'm beginning to understand some of your fury that day in the woods. It's all a great mystery, but I'm sure you didn't intend to be so—so terrible. Oh, my dear, if we had only continued to be good friends, perhaps you'd let me help you now. For what good is money if one cannot help one's friends in distress? Still, I know you wouldn't let me help you, for men of your stamp cannot borrow from a woman, no matter how desperate their need. And yet—a paltry fifty thousand dollars!"

In the morning she telephoned Moira McTavish and invited the latter to lunch with her that noon. When Moira came, Shirley saw that she had been weeping.

"My poor Moira!" she said, putting her arms around her visitor. "What has happened to distress you? There, there, dear! Tell me all about it."

Moira laid her head on Shirley's shoulder and sobbed. Then, "It's Mr. Bryce," she wailed. "He's so unhappy. Something's happened; they're going to sell Cardigan's Redwoods. Just before I left the office, Mr. Bryce came in—and stood a moment looking—at me—so tragically I—I asked him what had happened. Then he said 'Poor Moira! Never any luck!' and went into his—private office. I waited a little, and

then I went in too; and—oh, Miss Sumner, he had his head down on his desk, and he reached up and took my hand and—and laid his cheek against it—and oh, his cheek was wet. It's cruel—to make him—unhappy. He's good—too good. And—oh, I love him so, Miss Shirley, I love him so—and he'll never, never know. I'm just one of his—responsibilities, you know; and I shouldn't presume. But nobody—has ever been kind to me but Mr. Bryce—and you."

THE hysterical outburst over, Shirley led the girl to her cozy sitting-room upstairs. Moira's story—her confession of love, so tragic because so hopeless—had stirred Shirley deeply.

"Of course, dear," she said, "you couldn't possibly see anybody you loved suffer so and not feel dreadfully about it. And when a man like Bryce Cardigan is struck down, he's apt to present rather a tragic and helpless figure. He wanted sympathy, Moira—woman's sympathy, and it was dear of you to give it to him."

"I'd gladly die for him," Moira answered simply. "Oh, Miss Shirley, you don't know him the way we who work for him do. If you did, you'd love him, too. You couldn't help it, Miss Shirley."

"Perhaps he loves you, too, Moira." The words came with difficulty.

Moira shook her head hopelessly. "No, Miss Shirley. I'm only one of his many problems, and he just won't go back on me, for old sake's sake. We played together ten years ago, when he used to spend his vacations at our house in Cardigan's woods, when my father was woods-boss. He's Bryce Cardigan—and I—I used to work in the kitchen of his logging-camp."

"Never mind, Moira. He may love you, even though you do not suspect it. Tell me about his trouble, Moira."

"I think it's money. I'm afraid things aren't going right with the business. It hurts them terribly to have to sell the Valley of the Giants, but they have to; Colonel Pennington is the only one who would consider buying it; they don't want him to have it—and still they have to sell to him."

"I happen to know, Moira, that he isn't going to buy it."

"Yes, he is—but not at a price that will do them any good. They have always thought he would be eager to buy whenever they decided to sell, and now he says he doesn't want it, and old Mr. Cardigan is ill over it all. Mr. Bryce says his father has lost his courage at last; and oh, dear, things are in such a mess. Mr. Bryce started to tell me all about it—and then he stopped suddenly and wouldn't say another word."

Shirley smiled. She thought she understood the reason for that. However, the crying need of the present was the distribution of a ray of sunshine to broken-hearted Moira.

"Silly," she chided, "how needlessly you are grieving! You say my uncle has declined to buy the Valley of the Giants?"

Moira nodded. "Moira, I'll see that he does buy it. What price are the Cardigans asking for it now?"

"Well, Colonel Pennington has offered them a hundred thousand dollars for it time and again, but last night he withdrew that offer. Then they named a price of fifty thousand, and he said he didn't want it at all."

"He needs it, and it's worth every cent of a hundred thousand to him, Moira. Don't worry, dear. He'll buy it, because I'll make him, and he'll buy it immediately; only you must promise me not to mention a single word of what I'm telling you to Bryce Cardigan, or in fact, to anybody. Do you promise?"

Moira seized Shirley's hand and kissed it impulsively. "Very well, then," Shirley continued. "That matter is adjusted, and now we'll all be happy. Here comes Thelma with luncheon."

When Moira returned to the office, Shirley rang for her maid. "Bring me my motor-coat and hat, Thelma," she ordered, "and telephone for the limousine." She seated herself before the mirror at her dressing-table and dusted her adorable nose with a powder-puff. "Mr. Smarty Cardigan," she murmured happily, "you walked roughshod over my pride, didn't you! Placed me under an obligation I could never hope to meet—and then ignored me—didn't you? Very well, old boy. I'm going to make a substantial payment on that huge obligation as sure as my name is Shirley Sumner. I'll be put to my wit's end to get it to you without letting you know. And yet you deserve it. You're such an idiot for not loving Moira. She's an angel, and I gravely fear I'm just an interfering, mischievous, resentful little devil seeking vengeance on—"

SHE paused suddenly. "No I'll not do that, either," she soliloquized. "I'll keep it myself—for an investment. I'll show Uncle Seth I'm a business woman, after all. He has had his fair chance at the Valley of the Giants, and now he has deliberately sacrificed that chance to be mean and vindictive. I'll buy the Valley but keep my identity secret from everybody; then, when Uncle Seth finds a stranger in possession, he'll have a fit, and perhaps, before he recovers, he'll sell me all his Squaw Creek timber—only he'll never know I'm the buyer. And when I control the outlet—well, I think that Squaw Creek timber will make an excellent investment if it's held for a few years. Shirley, my dear, I'm pleased with you. Really, I never knew until now why men could be so devoted to business. Won't it be jolly to step in between Uncle Seth and Bryce Cardigan, hold up my hand like a policeman, and say: 'Stop it, boys. No fighting, if you please. And if anybody wants to know who's boss around here, start something.'"

And Shirley laid her head upon the dressing-table and laughed heartily. She had suddenly bethought herself of Aesop's fable of the lion and the mouse!

When her uncle came home that night, Shirley observed that he was preoccupied and disinclined to conversation.

"I noticed in this evening's paper," she remarked presently, "that Mr. Cardigan has sold his Valley of the Giants. So you bought it, after all?"

"No such luck!" he almost barked. "I'm an idiot. I should be placed in charge of a keeper. Now, for heaven's sake, Shirley, don't discuss that timber with me, for if you do, I'll go plain, lunatic crazy. I've had a very trying day."

"Poor Uncle Seth!" she purred
(Continued on page 154)

WHAT HAS HAPPENED IN "THE VALLEY OF THE GIANTS"

"I'M just naturally stubborn" said Bryce Cardigan cheerfully.

He found his father, lumber pioneer, blind and almost penniless. He took on old Cardigan's fight against Colonel Seth Pennington, unscrupulous Eastern operator.

He made friends with Shirley Sumner, the Colonel's niece, and declared his love during a free-for-all fight in Pennington's woods. After whipping her uncle's woods-boss for cutting down a tree in the Valley of the Giants, his father's grove of redwoods, he saved Shirley and the Colonel from a run-away train and then calmly told them he expected to fight them both for supremacy.

He fired old McTavish, his father's drunken woods-boss and installed Moira, his beautiful daughter, in the company office. And he is now discussing with old Cardigan how he can hide the fact that he is behind the building of the new logging railroad to parallel Pennington's and open up inaccessible timber property.

Killed 200 Rats At One Baiting

**Dog, Ferret and Traps Failed—Amazing Virus Quickly Killed Them All.
Not a Poison**

"I was over-run with rats," writes H. O. Stenfort of Redford, Mich. "Seemed to be several hundred of them. Dog, Ferret and Traps failed. Was discouraged. Tried Imperial Virus and was rid of them all in a short time. Have found rat skeletons, large and small, all over the farm."

"The year previous Rats killed 200 out of 300 baby chicks. Last year saved them all. Will send for 10 bottles for neighbors, and we will clean up the whole neighborhood."

Rats, Mice, Gophers, in fact all Rodents, greedily eat Imperial Virus on bait. Sets up burning fever. Pests die outside hunting air and water. Harmless to humans, poultry, pets, stock, etc. Economical to use. Indorsed by Farm Bureau Experts and large, nationally known institutions everywhere.

You Can Get Yours Free

SEND NO MONEY. Write today to Imperial Laboratories, Dept. 1002, Kansas City, Mo., and they will mail you two regular \$1.00 bottles of Imperial Virus (double strength). Pay postman only \$1.00 and few cents postage on arrival. Use one yourself and sell the other to a neighbor, thus getting yours free. Readers risk no money, as Imperial Laboratories are fully responsible and will refund your \$1.00 on request any time within 30 days.

The Martinique

Under Hote McAlpin Management

BROADWAY, 32nd-33rd STS., NEW YORK

One of New York's Distinguished Hotels

FRANK E. JAGO-

RESIDENT MANAGER.

600 Rooms—\$2.50 and up

The Martinique offers comfortable rooms at moderate rates, and in its dining rooms, which are most attractive, one finds the best food, well served and at reasonable prices; Club Breakfasts, Special Luncheons and Dinners, or a la carte service if preferred.

The hotel is situated in the center of things in general, being convenient to shopping and wholesale districts and adjacent to the theatre section.

There is an entrance from the hotel to the New York Subway's and Hudson Tubes, affording direct communication with the Pennsylvania, Grand Central, and Railroad Stations at Jersey City.

Radio "Listening In"

Operating The Simple Regenerative Set

NOW that farms are being radio-equipped, a few words on operation of radio sets and what may be expected of them are not amiss. Assuming that a single tube regenerative outfit such as was described in the last radio installment in the American Agriculturist is in use, and the average single tube commercial product is of this type, there are one or two simple details of utmost importance. Where the WD-11 tube is in use the adjustment of the rheostat will not be found critical, and it is best to turn the rheostat on only far enough to give satisfactory regeneration. As the dry cell becomes used up it will be necessary to advance the rheostat more and more until finally, no regeneration can be obtained even with it all the way around. About 75 hours of continuous service can be expected from a single dry cell before it is necessary to purchase a new one. There are also several types of small storage or renewable batteries available, and although their initial cost is about six or eight dollars, in the long run they are more satisfactory because of their constant voltage. The Edison cell, for instance, gives 1,000 hours service with one WD-11, and then a new internal element may be purchased for a dollar or two. If more than one WD-11 is used, as for amplification, as many dry cells as there are tubes should be connected in parallel for the "A" battery.

How Batteries are Rated

The standard "six volt" tubes operating from a storage battery require about 1 ampere of current each. Batteries are always rated in "ampere-hours," and it is easy to determine just how many hours a battery will last with such tubes by dividing its ampere-hour capacity by the number of amperes consumed. For instance, if the battery is of the 80 ampere-hour size, and a 3 tube receiver is in use, there will be 3 amperes needed. Eighty divided by 3 gives about 25 hours continuous service. It is dangerous to allow the battery to discharge lower than the minimum specific gravity reading marked on the label, and a syringe hydrometer should be purchased to gauge this. Where the farm is equipped with a 32-volt lighting system, it is possible to purchase an additional storage battery similar to the type used in the unit. This battery, when exhausted by the radio set, may be charged by substitution in the charging system. Where the house is wired with 110-volt alternating current, there are a number of methods available for battery charging in a most economical manner. The vibrating rectifier is a fairly reliable instrument, although the contacts need cleaning every month or two. The cost for charging the average battery by one of these rectifiers is about a nickel. The Tungsar rectifier uses special bulbs for the rectification, and while the operation is almost noiseless and perfectly reliable, the tubes must be replaced once in a while. Hence it may be seen that the vibrating charger is more economical although it is noisy, while the bulb type costs considerably more for upkeep, but appeals to those who wish quiet operation.

The "B" Battery

"B" batteries usually last five or six months, and manifest old age in several ways. Often the zinc cylinders of the cells become eaten away, and the chemical action within will cause a terrific scraping and grinding sound in the receivers. Often they will begin to swell and bulge at the sides when used up. They, however, are not a serious item of expense in radio upkeep. Provided the vacuum tubes are never illuminated more brightly than necessary, they will last for a year or two, and recharging the battery will probably be the most expensive item. Of course with the WD-11, this expense is very slight.

If a regenerative set is used, and there are neighbors within half a mile using any form of radio set, it is a matter of radio etiquette to prevent

the set from regenerating during the earlier evening hours as much as possible. Each regenerative receiver is also a low power transmitter, and radiates its feeble energy for a considerable distance, often interfering seriously with clear reception at some other station. One sometimes hears little squeals and whistles chasing each other up and down while he is listening to a program, caused by some inconsiderate owner of a representative outfit.

When tuning up and down the scale on such a set, the tuning dial and the dial controlling the regeneration should always be kept in such a relative position that regeneration is almost, but not quite beginning. At this point there will be marked amplification of music and speech without distortion, although if any adjustment is changed the least bit without at the same time altering the "tickler" or the "plate variometer" (which control regeneration) there will be soft hissing sound or squeal heard. Since owners of sets in country locations have so many broadcasting stations within their reach it might be well to keep a card handy to the set with the various dial adjustments marked for best results on each station. These of course would be found by actual trial.

In the Air

It seems to be the fashion now for each broadcasting station to work along some particular line of endeavor, which will tend to identify and make that station prominent. And the various stations have adopted slogans, bells, bits of song or other "earmarks" which appear somewhere in the program. Although there are over 500 broadcasting stations east of the Mississippi, there are few really outstanding stations. About New York there are three excellent stations: WEAJ, obtaining an enviable reputation for the clearness of its broadcasting; WJZ the medium through which so many after-dinner speeches from meetings and banquets have been broadcast; WOR, whose afternoon selections are admired for their originality and variety. Boston is well represented by WNAC the Shepard Stores and WGI of Medford Hillside. In that vicinity, too, the Westinghouse company operates WBZ of Springfield, Mass., this station, together with the other Westinghouse stations in Newark, KDKA of Pittsburgh, and KYW of Chicago, are all careful to give complete information of value to the farmer.

The Central states are well represented by KYW, KSD, the St. Louis "Post Dispatch," WLAG of Minneapolis, "The Call of the North" WOC of Davenport, "Out Where the West Begins," WDAF of Kansas City, and WHAS of the Louisville "Courier-Journal."

Southern stations seem to cluster in Atlanta for some unaccountable reason, and with one or two of the Fort Worth, Texas, stations and three of Philadelphia, the radio fan may travel at will over the eastern part of our country and yet warm his toes before his own fireside. Radio entertainers cannot see their audiences, and thus depend solely upon letters, telegrams and phone calls for applause or criticism. For that reason, broadcast stations are anxious to hear from their listeners, for suggestions and comments are always welcome. To attract such communications, several of the broadcasting stations have organized "fraternities" among their listeners, and WDAP of the Drake Hotel, Chicago, awards prizes, raffles off Ford cars in front of the announcer's microphone, and in every way simulates the personal touch found in the theater. Inasmuch as the stations are operated at a great expense without possibility of revenue, and the performers are not paid for their services, it really becomes the duty of a satisfied listener to write his applause to the station, or if certain features are objectionable to him, to send in his well-meant criticism.

For the information of those who have constructed the single tube outfit described in the American Agriculturist of February 3, the next radio article will explain the construction of a two-stage amplifier to be used in conjunction with any one bulb receiver.

Planned Menus Save Time

Care of House Plants—An Inexpensive Stylish Dress

PLANNING menus, of course, requires a little time and careful thought, but my system "kills two birds with one stone." Friday night is my "planning night," and I use the cheapest corresponding cards I can get. On one side of a card I write the day's menus and on the other side I write the recipes included in those meals that I do not bother trying to remember, so that I need not waste time with the cook book. I first look in my pantry to see what I have on hand, and then, after planning the meals for a whole week, I know just what groceries I need for that week, and can have my order ready for Saturday's dealing without that bothersome forgetting of needed articles. That is one "bird." Now for the other:

I use white cards for every day, pink for Sunday, and blue for "specials," such as harvesting and threshing grain. I write the menus with ink with the exception of the day and the kind of cereal, cake, pudding, or pie. Those I write with lead pencil so they can be erased and used on other days with other kinds of cereal, etc., if so desired. By planning them that way, if you are sick, tired, or have something extra to do, you need only to know what you have on hand, select your cards accordingly, and behold! your meals are planned for a week, you can write your grocery order, and two worries are off your mind.

Use Colored Cards

When you have your collection of menu cards the "man of the house" and children will delight in helping select the menus for a week's meals. I shall add a few words of warning here. Do not let the "menu system" be a tyrant. If my husband makes an unexpected visit to town, and brings home a steak for dinner, he gets it no matter what is on the menu for that meal. Or if the children express a wish for a different dessert, and I know it in time and have the ingredients, they get it. A little straying from the beaten path once in a while will not hurt the system, provided you know it in time—especially in the matter of desserts.

I never write the kind of preserves, jellies, and pickles on the cards, but just keep in mind the following rule:

"Never repeat the same flavor twice at one meal." For instance, if peaches are in the dessert, do not have peach preserves. As for pickles, do not serve very sour pickles with poultry and game, or very sweet pickles with pork and sea food.—CATHARINE R. GROVES.

CARING FOR HOUSEPLANTS

BERTHA ALZADA

Improper methods of watering plants result in more fatalities than any one thing. Sometimes it is too much water and sometimes too little, but the effect is much the same, though the chances for life are entirely with the dry plant. The plant kept too wet will have the roots injured beyond much chance to save them, while the roots of the other in the dry soil will be sturdy. Such plants quickly recuperate when given right conditions.

The right way to water plants is to examine the soil, water only when needed and then soak the whole ball of earth fully. To tell when the soil is dry enough, dig down a little, and take a large pinch between the fingers. If it will not stay in a solid mass, water is needed. If it does not crumble readily

when you tap it, you will not water it yet.

Where plants have been hurt badly by overwatering, the soil can seldom be made to give results. The best plan is to wash the soil from the roots gently and pot in new soil, and then keep on the dry side for awhile until it shows signs of recovery. Water will not help a sick plant, though the soil must not get dust-dry. Keep just at the point where the soil crumbles when pressed and tapped.

Plants stunted from being kept too dry will need good water only. When the ball of earth gets dry and hard, as it does when watered often in small doses, it is hard to soak it up. The best way is to set the pot in a tub with two inches of water in the bottom, and let it take its time to soak through to the top. You may have to put more water in the tub, but if you can make it soak up in shallow water, it is better, as there is less danger of washing soil out when draining it afterward.

A SMART MID-SEASON DRESS

The ideal between-seasons dress is this wool crepe frock, with its smart long lines, its braid trimming and its wide range of sizes.

The crepe is all wool, of medium weight. The collar and flare cuffs har-

monize with the color of the dress. This is a slip-on model with a self-material belt and a metal clasp buckle.

Colors: Navy with copenhagen, or brown with tan.

Sizes: 34 to 44 bust. Skirt lengths 33 to 39 inches. (Give all measurements.)

Price: \$7.05—postage prepaid. Mention R. W. 20 in ordering.

All garments shown in this department are personally chosen by the Fashion Editor, who picks them for quality, style and price. They are returnable if not satisfactory and in case of a return, should go directly to the firm which supplied them, with a letter asking for a refund or an exchange. The Fashion Editor will be glad to answer questions about these or other garments and to advise about dress problems of all sorts.

When peeling onions cut off the root first and the odor will not be so strong.

NEW LAMP BURNS

94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, R. M. Johnson, 642 N. Broad St., Philadelphia, Pa., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make \$250 to \$500 per month.

New 300 Candle Power Lamp

THE DIAMOND LIGHT

Make \$60 to \$100 a Week
Introducing this wonderful new lamp. Gives soft, brilliant light, restful to eyes; ideal illumination. Burns Kerosene or Gasoline. Clean, odorless, economical. Burns 96% air, 4% fuel. Absolutely safe. Lights with match. 100 times brighter than wick lamps. Patented. Greatest improvement of age. Table lamps, hanging lamps, lanterns. Work all or spare time. You simply take orders. We deliver by Parcel Post and do collecting. Commissions paid same day you take orders. No experience necessary. Get started at once. Big season now on. The Home Maker Learns How to Cut Glass

Up-to-date Housewives Know Many Arts Besides Cooking and Sewing

A FILE, a poker, and the kitchen fire make a complete glass-cutting outfit for any home. With them—and the knowledge of how to use them—you can trim a pane for that odd-sized cellar window, or cut a glass for that oval picture frame you always forget to take to town with you.

I learned how to use them through an accident. I hadn't been married very long, and dinners and oven doors seemed much more important to me than they do now. Of course, I realize that no really experienced housewife would ever set a pan of water on top of her oil stove oven in the first place. But I did. Then I opened the oven door too quickly, and the water slopped over on the hot glass, cracking it in a dozen pieces.

I couldn't have it happen that morning because my mother-in-law and my sisters-in-law were coming to a dinner that had to be cooked in that oven. As I say, I couldn't have it happen. But it did.

At the sound of the crackling glass, and my cry of dismay, the handy-man of the house hurried into the kitchen to learn the cause of the trouble. One glance assured him that there were no fatalities, and his first words were comforting.

"That isn't the only glass in the world."

"I know it, but we have none that will anywhere near fit this door."

"Oh, well, I'll cut it to fit."

"Cut it? I thought you had to have a glass cutter or something like that to cut glass."

"No. All you need is a file and some kind of a poker."

We hurried out and got the glass, a file, and an old soldering iron in place of a poker. Then he put the soldering iron in the flame of my stove and turned his attention to the glass.

"I don't suppose you have any chalk?"

Of course I hadn't.

"Well, I guess I can use this file for a marker."

The opening in the door was 7x14 inches. Beginning at the corner of the pane, he marked off 7 inches in one direction and 14 inches in the other. Then he measured the other two sides with a yard-stick and scratched the boundaries on the glass, using the yard-stick as a straight edge.

Before the actual cutting began, he lifted the glass edgewise, and drew the file harshly across the upper corner of the edge just where the cutting began. That made a well-defined notch to serve as a starting point.

By this time the soldering iron was red hot, and he took it from the fire. Holding the point just above the glass, he began at the notch and moved the hot iron very slowly along the line on which he wanted to part the glass. A tiny crack followed the poker. When it seemed to lag, he waited a bit till it caught up again. When he reached the corner on one line, he began again where the other boundary met the edge of the large pane, and led that crack right down to the corner again. Then my new oven door dropped away straight edged and exactly the right size.

We have often used this simple method since that day. When a head-light breaks on the flivver, we draw a

circle of the proper size on paper, and lay a piece of double-strength window glass over the pattern and cut out a new one. Indeed, for curves, the hot poker is better than the ordinary glass cutter, for the latter needs a solid pattern to work against, and the poker can be made to follow any design.

MAKE TUESDAY WASH DAY

JESSIE WALKER

Why so many women prefer Monday for wash day is beyond my comprehension. In my estimation, it is the most undesirable day of the week. Tuesday is a much better day. Monday should be the day of preparation. The first thing on Monday morning, after the usual work is done, I carefully brush and put away all the garments worn on Sunday. Grease spots are removed and torn places carefully mended. It is much better to patch a garment before it is washed and ironed as the patch then shows less, while it is also much easier to mend a soiled garment than a garment starched and ironed. When the mending is all done, the clothes are assorted and put to soak or put into a tub ready for the water to be added at night. This takes only an hour on Monday morning, or sometimes a little more, and knowing that everything will be ready for the wash tub on Tuesday morning relieves one's mind greatly. On wash day we do not dine on left-overs or at the side table, for the washing is all on the line before time to get dinner. A good washing machine and wringer and a man or big boy to manipulate them is a good help, but if you have none of these, use a good washing powder.

Your paper is very popular.—PHILIP MENGES, Chautauqua, N. Y.

Aspirin

Say "Bayer" and Insist!

Genuine

Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer product prescribed by physicians over twenty-two years and proved safe by millions for

Colds	Headache
Toothache	Lumbago
Earache	Rheumatism
Neuralgia	Pain, Pain

Accept "Bayer Tablets of Aspirin" only. Each unbroken package contains proper directions. Handy boxes of twelve tablets cost few cents. Drug-gists also sell bottles of 24 and 100. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.

THE BEAUTIFUL GLADIOLUS

Box 351, New Lebanon, N. Y.

TO WEAR AT HOME OR WHEN YOU STIR ABROAD

TWO widely different styles for the woman, and a design which can be used for either school or "dress up" for the young girl, are shown this week. The blouse and skirt call for soft, figured silks, crêpe or brocades; the house dress, since it needs a combination of materials, might be used for new goods or to rescue an old dress for make-over.

If you can sew up a seam, you can make blouse 1653 and it takes only 2 1/2 yards of 36-inch for the medium size. We advise the new printed silks—riotous colors or more subdued rich figures as you prefer. Three sizes, small, medium, large. Suitable for the large figure too. Pattern 12c. No trouble-some waistline with this pleated skirt! No. 9826 is attached to a neatly fitted camisole with elastic instead of a tight waistband. The pattern comes in sizes 16 years, 36, 40 and 44-inches bust measure. Size 36 requires 3 1/4 yards 36-inch. Pattern, 12c.

1581
Trans.
626

No. 1581 is the newest thing for the girl of "the awkward age!" Whether it be a schoolfroek in ratine, poplin or serge, or a party gown in erêpe de ehine, velvet or ehallis, trim it with embroidery in gay contrasting colors and accent the neck (which may be square or round) and front side-closing by big buttonhole stitching of a bright shade.

No. 1581 comes in sizes 4, 6, 8, 10, 12 and 14 years. Size 8 requires 2 yards 30-inch material. Pattern, 12c. Transfer No. 626 (blue) 12c.

Going like hot cakes! Our spring book of fashions with its pages crammed full of useful and pretty designs to tempt the home dressmaker. The well-dressed woman cannot afford to miss it, for every model is stylish and up to date.

The catalogue is 10c. Each pattern is 12c. We prefer to receive remittance in stamps as coins often are lost. If you send currency, wrap carefully. Be sure of exact numbers and sizes, write your name and address very clearly and mail your order to Fashion Department, American Agriculturist, 461-4th Avenue, N. Y. C.

"The boss of the house" must dress accordingly. Gone are the sloppy mother Hubbards of other days! Enter the trig smart-looking housewife of 1923. No. 1543 is a work-froek which might easily be a play froek too. It has a modified bolero, becoming to almost all women, combined with the loose long-waisted line which (thank heaven!) fashion decrees for all dresses now. Use ging-ham, chambray, ratine—almost any wash fabric. No. 1543 is out in sizes 34, 36, 38, 40, 42, 44, 46 and 48-inches bust measure. Size 36 requires 3 1/4 yards 36-inch material, 3/4 yard 36-inch contrasting, 7/4 yards binding. Price 12c.

1543

Bargains in everything you need are

Here!

Reviewing the Latest Eastern Markets and Prices

THE TREND OF FEED PRICES

EVERY dairyman is interested to more or less degree in the feed market outlook for the weeks between now and spring grass. With this in mind, I pass on to you the opinions as to the feed market situation of a man with whom I talked this week, who is in position to know as much about such conditions as anyone in the country.

As to corn, oats, wheat and barley, he stated that the situation was very uncertain and would be largely influenced by the outcome of foreign complications now existing. There seems to be a tendency among farmers to hold what grain they have left for a higher market, and the consumption of corn on the farm is very greatly increased over normal years. If financial arrangements are made that will enable foreign nations to purchase in the volume they undoubtedly need, our markets would, of course, be much stronger. On the other hand, if this is not done, there is no reason for any material advances.

Linseed oil-meal stocks in all terminal markets are light. Supplies of flax seed at country points are adequate to keep the mills operating in a limited way until a new crop, but it is rumored that some of the Minneapolis crushers contemplate discontinuing on account of limited supplies of raw materials. The circumstances seem to this man to offer no reason for declines in this product.

Cottonseed Meal Lower

Cottonseed meal and cake have declined from \$1 to \$2 during the past few weeks. The domestic demand for this material has been about normal and the cotton crop about half of normal this season. This man's opinion is that the low point has been reached for the time being at least, and some advances from present prices may be expected.

The supply of gluten feed is limited with most manufacturers. With corn advancing slightly, there seems to be little justification for lower prices in the immediate future. The freer offerings in some sections have been due to railroad embargoes which made it impossible for mills to fill their eastern sales.

Mills both northwest and southwest are running on a very limited capacity, and in consequence supplies of brans and middlings are very limited. It will probably be April or May before some of the mills are caught up on extracts, passed due. Spot bran and middlings are both in demand, and as long as this condition exists material declines are unlikely.—HERSCHEL H. JONES.

POTATO SITUATION BAD

Those who have potatoes still on hand will be interested in the report just issued by the United States Department of Agriculture estimating the marketable stocks of white potatoes on hand January 1. According to this estimate 29.7 per cent of the total 1922 production in the late potato states is still on hand, compared with 26.6 per cent of the total crop on hand at this time last year. The estimated total crop of this season was 422,122,000 bushels, compared with 337,980,000 bushels last year.

In the 19 states of especially heavy production, including New York, 35.3 per cent of the marketable crop is still on hand, compared with 31.4 per cent on hand at this time last year.

In the heavy production states, 85.8 per cent of the merchantable stock still on hand is held by the growers themselves and only 14.2 per cent by dealers.

The average price of 46.2c per

bushel in those states on December 1, 1922, was lowest for that date in eight years. The price of 58.7c on December 1, 1915, was the nearest to it.

The total carlot shipments of potatoes in the entire country to date are only a few thousand cars in excess of last year to same date, in spite of the heavier production.

This data does not make the outlook for potato growers in New York State who still have their potatoes look very encouraging. If statistics do not lie, spring prices for potatoes will at least be no higher than at present.

Receipts of potatoes at New York were liberal, but included very few Maines. State round whites at the yards sold at \$2.40 to \$2.65 per 180 lb. bulk. There has been a lot of frozen stock which sold at very irregular prices. Sacked States sold at \$1.90 to \$2 per 150-lb. sack, with a few at \$2.10.

APPLES MOVE SLOWLY

The market for both barrel and box apples has been in unsatisfactory shape

the snow will check shipments and cause a firm market temporarily. The cold storage reserve of eggs now are only about 1,500 cases more than at this time last year. Considering the much larger quantities put into storage last spring, the consumption of eggs has obviously increased considerably.

BUTTER FALLS—THEN RISES

Although wholesale butter prices, both fresh and storage, dropped down to the lowest level in many weeks since our last review, they gradually picked up again. The market was firm on February 8, with creamery salted high score at 50 to 50½c. Receipts are running considerably in excess of last year. Since January 1 New York has received 50,000 tubs more than in the same period last year. The colder weather of last week, however, cut down the receipts, and the prospect of a lighter supply, together with an increased demand, stiffened the market. Retail prices have come down 4 or 5c per lb., and most of the chain stores

what they were last year in the same period.

Poultry shippers are advised to cut out and keep before them the following calendar of Jewish and other holidays in the next three months:

Purim, March 2, Market Days, February 26 to March 1; Commodities in Demand, Fowls and Hen Turkeys.

Easter, April 1, Market Days, March 26 to 29; Commodities in Demand, Fowls, Capons, Ducks, Geese, Rabbits, Spring Lambs and Prime Veal Calves.

Passover, April 1, Market Days, March 26 to 29; Commodities in Demand, Turkeys, Fat Fowls, Ducks and Geese.

Last Passover, April 7-8, Market Days, April 2 to 6; Commodities in Demand, Prime quality of all kinds.

Feast of Weeks, May 21, Market Days, May 15 to 18; Commodities in Demand, Very little extra for this holiday.

Decoration Day, May 30, Market Days, May 24 to 29; Commodities in Demand, Broilers and Prime stock of all kinds.

HAY SURPLUS DISAPPEARING

Due to continued light shipments, the outlook for hay at New York is improving, especially on high grades. Permits are hard to get and there is no immediate prospect of heavier receipts. Most of the offerings are No. 2 and No. 3 western hay. Most sales have been at \$20 to 23 per T. and none exceeding \$24.

CHANGES IN FEEDS

Wholesale feed prices at Buffalo showed declines last week on cottonseed meal and advances on mill feeds. Offerings of feed at Buffalo have been liberal, but trading was handicapped by the railroad situation. Quotations on earlots f. o. b. Buffalo in 100-lb. sacks February 7 were:

Gluten feed, \$46.55 @ 47; cottonseed meal, 36%, \$47 @ 47.50; oilmeal, 33% to 34%, local billed, \$50.50 @ 51; standard spring bran, \$32.50 @ 32.75; hard winter bran, \$33 @ 33.25; standard spring middlings, \$33 @ 33.25; choice flour middlings, \$33.25 @ 35.75.

No. 2 yellow corn per bushel at Buffalo was 84½c; No. 2 white oats, 50¾c; rye No. 2, 98¼c.

GRAIN MARKETS STRONGER

A more optimistic outlook on the European situation last week caused a stronger market on future grains, which had its effect on cash grains. Prices on February 9, per bu., at New York, follow:

Wheat, No. 2 red, \$1.32; No. 2 hard winter, \$1.29½; corn, No. 2 yellow, 93c; oats No. 2 white, 55½ @ 56c; ordinary white clipped, 54½ @ 56½c; rye, \$1.02; barley, 79 @ 80c; buckwheat, \$1.96 @ 2.16. At Chicago, corn No. 2 yellow, 74½ @ 75c; oats No. 2 white, 44½ @ 45½c; barley, 60 @ 68c.

The Valley of the Giants

(Continued from page 150)

sweetly. Her apparent sympathy soothed his rasped soul. He continued:

"Oh, I'll get the infernal property, and it will be worth what I have to pay for it. I'll see Judge Moore to-morrow and offer him a quick profit for his client. That's the game, you know."

"I do hope the new owner exhibits some common sense, Uncle dear," she replied, and turned back to the piano. "But I greatly fear," she added to herself, "that the new owner is going to prove a most obstinate creature and frightfully hard to discover."

True to his promise, the Colonel called on Judge Moore bright and early the following morning. "Act Three of that little business drama entitled 'The Valley of the Giants,' my dear Judge," he announced pleasantly. "I play the lead in this act. You remember me, I hope. I played a bit in Act Two."

"In so far as my information goes, sir, you've been cut out of the cast in Act Three. I don't seem to find any lines for you to speak."

"One line, Judge, one little line. What profit does your client want on that quarter-section?"

"That quarter-section is not in the market, Colonel. When it is, I'll send for you. And remembering how you butted in on politics in this country last fall and provided a slush-fund to beat me and place a crook on the Superior Court bench, in order to give you an edge in the many suits you are always filing or having filed against you, I rise to remark that you have about ten split seconds in which to disappear from my office. If you linger longer, I'll start throwing paper-weights." And to emphasize his remark, the Judge's hand closed over one of the articles in question.

The Colonel withdrew with what dignity he could muster.

(Continued next week)

Quotations From Eastern Markets

Sheep, common to good ewes.....	3½ @ 5½	7 @ 8½
Hogs, Yorkers.....	9¼ @ 9½	9½

since last week. The movement has been slow. Buyers want only fancy graded stock, especially McIntosh and Spies, and really fancy goods sold readily. Both Baldwins and Greenings sold at \$4 to \$5 per barrel, depending on quality. Good McIntosh brought \$10 to \$15 per barrel.

ONION MARKET DULL

Heavy supplies of onions, of which a large part were of inferior quality, caused a dull and weak market. State yellows sold per cwt. at \$2.25 to \$2.65.

CABBAGE HOLDS FIRM

The New York market for cabbage continued firm, with Danish selling at \$32 to \$35 per ton, with some fancy as high as \$38. New cabbage is still in light supply, and it looks as though the market would hold steady for the next two weeks.

EGG MARKET STILL LOWER

The highest quotation on New Jersey hennery white eggs was 45 to 48c per doz. last week. The great bulk of the nearby shipments were not of uniform, fancy quality to bring this price. Accumulations of nearby eggs were pretty well cleaned up in the market. Buyers tended to discriminate closely as to quality. Hennery browns, extra fancy, brought within two cents of the top price on fancy whites, and demand for fancy dark brown eggs was good. In packing hennery browns it pays to sort out the dark color, which are in better demand than cream color.

Since January 1 the receipts at New York have been about 40,000 cases ahead of last year in the same period. Receipts last week were about 8,000 cases in excess of the week before. It is likely that the colder weather and

are now selling at about 55c. The stocks of cold storage butter still on hand in the four large markets of the country, February 7, were only 8,700,000 lbs., compared with 23,000,000 lbs. on the same date last year.

There is a surplus of unsalted butter in the market and only a limited demand for it. Unless values advance again, it is improbable that much more of the Danish butter will be imported.

CHEESE MARKET WEAKER

The market for cheese was not so firm last week as in the week previous. The feeling as to the near future is uncertain. Jobbers are only buying small lots for the most part to meet current needs. Stocks of held State flats, however, are very moderate and holders seem to feel that they can maintain present prices for a while at least. The quotation on State flats, held average run, which affects the price of fluid milk, continued at 28 to 28½c per pound.

LIVE POULTRY MARKET STRONG

Last week there was temporarily a shortage of live fowls, chickens and broilers. Broilers are in demand. Fancy heavy fowls brought premiums of 1 to 2c above top quota. Western shipments by freight continue heavy, but were delayed in arrival. Very few express shipments of fowls or chickens are arriving. The market is glutted with dressed poultry and nearby shippers can get better results shipping alive.

Nearly 2,000,000 pounds of dressed poultry were received at New York last week, which was considerably over twice as much as in the corresponding week last year. The total receipts of dressed poultry in the four largest markets since January 1 are nearly twice

Belgium Melotte

Imported Separator

Self-Balancing Bowl

The Belgium Melotte is the only single-bearing-bowl separator ever made. This patent Bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years of use as when new. Positively cannot ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by remixing with milk. Send coupon below today. Get the Free Book that tells about this great Melotte.

\$ 750
After Trial

We will send an imported Belgium Melotte Cream Separator direct to your farm on 30 days' absolutely Free Trial. Use it just as if it were your own machine. Put it to every possible test. Compare it with any or all others. The Melotte is easy to keep clean and sanitary because it has only one-half the tinware of other separators. Turns so easily that bowl spins 25 minutes after you stop cranking unless brake is applied. No other separator has or needs a brake. After you have tried it for 30 days and you know it is the separator you want to buy, pay \$7.50 down and balance in small monthly payments.

Free Trial

Your choice of any of these three models. NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE. This wonderful Belgium Melotte Separator has been picked by a jury of thousands of farmers—picked by dairy experts throughout the world to be the "king" of all separators ever manufactured. It has broken all records for Efficiency of Skimming, Ease of Turning, Convenience of Operation and Durability. Send coupon below for Big Free Book.

Yankees, Cows and Maple Sugar—By Jared Van Wagenen, Jr.

A Thousand Grangers Gather at Syracuse

Annual Session Acts on Rural Schools, Prohibition and Legislation

WHEN the New York State Grange opened its annual session in the Mizpah Auditorium at Syracuse, Tuesday, February 6, there were 796 delegates in their places, representing 53 Pomonas, 919 subordinate Granges and over 130,000 Grange members in every part of the great Empire State. In addition to the delegates, several hundred visitors were present, swelling the large gathering to well over a thousand people.

Immediately after organization and seating of the delegates the Grange got busy with one of the best and most important business sessions in its history.

The problem that received the largest amount of interest and discussion during the week was that of the rural schools. The work and report of the Committee of 21 has greatly increased the interest of rural people in their schools and this interest was manifested in the Grange sessions by the introduction of many resolutions, both for and against the Committee's suggestions. In the final sessions the Committee went on record in favor of many of the suggestions of the Committee of 21.

The delegates voted for a larger school-tax unit, but such unit should not contain any city or village of more than 1,500 inhabitants. A resolution was adopted that there should be no consolidation of rural school districts without the approval of a majority of taxpayers in the district. This is practically in line with the suggestion of the Committee of 21 that any consolidation of the rural schools should be optional with the local patrons. A resolution was adopted calling for greater financial support of teachers' training classes and of the rural schools. The Grange Committee on Common Schools declared against all false economy, which limits expenditures for educational purposes. A very important achievement was a vote authorizing the Executive Committee to appoint a special committee to consider the establishment of a fund by the State to aid farm boys and girls who cannot educate themselves to secure an education.

A number of important resolutions on Legislation were passed. The Grange voted for the return of the direct primaries; against Governor Smith's proposed reorganization of the State Department of Farms and Markets; for repeal of the clause making it optional for cities to have daylight saving; a strong vote was recorded against the proposed repeal of the Mullen-Gage Act for modification of prohibition laws; against the abolishment or weakening of the State police, and against the proposed transfer of highway supervision from towns and counties to the State Department.

A very important resolution was the one opposing any change in the present restrictive immigration laws. A statement was emphatically made that while farmers need a larger supply of labor, they did not care for the kind which comes in hordes from foreign countries.

National Legislation increasing the amount of loan available to individual farmers

in favor of a rural school representative on the State Board of Regents; one commending the work of the Grange League Federation Exchange, and one in support of enforcement of State and National prohibition laws.

One of the important miscellaneous resolutions passed was one in favor of holding the World's Dairy Congress and the National Dairy Show in the City of Syracuse in the Fall of 1923.

F. J. Freestone Elected Lecturer

The Grange elected Fred J. Freestone of Interlaken as State Lecturer to fill the position left vacant by the death of Mrs. Blanche Alexander of Pulaski; H. E. Aiken of Jamestown was elected to fill a three-year term on the Executive Committee.

Albert Manning voiced the spirit of optimism in the Grange in his opening address when he said: "While agriculture has been passing through a most depressing period, still the farmers of New York State have much to be grateful for. When we compare agricultural prices in any State in the Union with New York State, we find the New York farmer coming through as well or better than any other section."

Prohibition Here to Stay

S. J. Lowell, Master of the National Grange, also told the delegates that they could be thankful that they lived in New York State. Master Lowell said "Conditions in the West are serious. Hundreds of farm are posted

for sale to meet taxes." The remarks of the speaker on prohibition drew applause when he said "Prohibition has come to stay. Ninety per cent of the farmers of the country are for it, and 100 per cent of the Grange is for it. While the farmers present this sort of a front the prohibition laws cannot be overthrown or seriously modified."

With the strong spirit of optimism that better times are ahead, there was an equally strong feeling that certain definite things must be done to bring about better times, not the least of which is a lessening of Government activity with a resulting lowering of the present too high taxes.

Dr. R. W. Thatcher of the Geneva Experiment Station, gave a fine talk at the Wednesday session, telling of the needs for a research laboratory at Geneva. Dr. Frank Graves, Commissioner of Education, also addressed the body, pointing out some of the disadvantages of the present educational system.

At the final evening session the sixth degree was exemplified on a large class of candidates from all sections of the State. Wednesday evening the jubilee pageant was given by the Onondaga County Grange, depicting the origin, early struggles and growth of the Grange.

The Way to Sell Apples

AS one of the officers of the Horticultural Society, I want to thank you for the splendid write-up given our annual meeting in last week's issue of your paper.

Your criticism regarding the large number of varieties grown in the East is well taken. There have been innumerable remedies prescribed during the past few years to cure the bad marketing conditions that confront the New York State apple grower, but two most important features of the subject have been given scant attention. The present requirements of the trade in all kinds of fruit require the small package and a choice product. The man who produces fancy apples, of any one, of not to exceed a dozen of the best varieties, selects them carefully and packs in small containers, so that when exposed for sale every apple will be in good condition, will as a rule have very little trouble in getting fair prices for his apples.

The waste caused by packing and shipping in barrels, in too many instances, is greater than would be the extra cost of a smaller container and a better pack. It is very generally true that the ultimate consumer pays about as much per pound for apples out of the barrel of very common quality as for those out of the box of superior quality because the consumer in the final purchase pays for all of the imperfect and bruised apples in the barrel whether they are sold or not. The better class trade demand the better varieties of apples and it wants them in good condition and the sooner we meet these requirements the better for the New York apple grower.—T. E. Cross, Dutchess Co., N. Y.

through Federal Land Banks from \$10,000 to \$25,000 was favored.

Another important and significant resolution was the one calling on the National Government to support Armenia, even if it led to this country's taking active part in foreign affairs.

A resolution in favor of abolishing tax-exempt securities by amendment to the Constitution failed of passage.

Federal Legislation was favored for the Voigt Filled Milk Bill, the French Truth In Fabric Bill and for the forced settlement of labor disputes by arbitration instead of strikes.

Among miscellaneous resolutions was one

Yankees, Cows and Maple Sugar

"Up Where the Mountains Meet the Sky, In Little Old Vermont"

LAST week I went to Burlington, Vermont, to attend the annual meeting of the State Dairymen's Association. It was a flying trip—two nights on the train and one day at the Convention. The Vermont Dairymen's Association may represent a little State, but it is nevertheless, a somewhat note-worthy institution. The Association is 53 years old and at the meeting there was present a man who was one of the charter members and who has the unique record of having missed only one annual meeting in all those years. I do not think that he pleads guilty of being a speech maker—being a very modest soul—but at the banquet the toast-master insisted that he stand up in his place while a great round of applause swept the dining room. It proves that in our hearts we all greatly honor that sort of enthusiastic loyalty.

Two that go Together

It happens in Vermont that almost every farmer is a maple sugar maker as well as a dairyman—so it is eminently natural and fitting that the Dairymen's Association and the Maple Sugar-makers' Association should unite in a joint convention. This meeting is always held at Burlington, thus enabling the farmers to look over their State College of Agriculture which is a part of the University of Vermont.

Burlington is the metropolis of the State and styles itself the "Queen City." I have seen it in summer—a city beautiful and wonderful for situation, seated on the hillside and looking out over the gleaming island-studded waters of Lake Champlain with the wooded folds of the Adirondacks on the horizon.

I remember a Farm Institute trip that I made in the State some years ago—two weeks in August, two meetings each day—in two different localities, and a swift rush between, covering, I think, every county of the State in this very hurried fashion. On several other occasions I have made brief visits to the State so that I have come to feel a certain familiarity with the Green Mountain country.

Vermont has a long and honorable history with her full share of the incidents which are the foundation of romance. Over on the eastern slope and perhaps half way up the State, I remember stopping to read a marker beside the road—a tablet recalling a far-off event that has in it all the elements of pathos and tragedy and heroism. It marks the spot which was the birth-place of the first white child born in Vermont. That child was born to a Massachusetts mother who was being

By JARED VAN WAGENEN, JR.

carried captive by the Indians down the long wilderness trail to Canada. Such grim happenings as this seemed only a part of daily life, at least of daily risks, to those heroic souls who laid the foundations of our rich and luxurious civilization.

Where the Real Yankee still Survives

Much has been written, but perhaps the full story can never be told—the story of the moral splendor of Puritanism, for those

weave romances concerning men and women whose hearts have been at peace and whose bodies have been dust for these hundred years. So after the session was finished, I went out in the August afternoon to this God's Acre, where every carved surname was pure English, while the given names were so frequently names in which the Puritan loved to baptise his children. Very suddenly, for no one had told me it was there, I came on the tomb of Justice Morrill, and then I remembered Vermont's great Senator, the Grand Old Man who served his State for more than fifty years at Washington, and then returned at last to lay him down among the hills where he was born. We farm people may well honor him, because by common consent he is the father of our nation-wide system of agriculture colleges.

The sun shines nowhere else
so bright
As up in old Vermont.
The snow lies nowhere else so
white
As up in old Vermont.
So when the native comes to
die,
He loves to go back there and
lie
Up where the mountains meet
the sky—
In little old Vermont!

The days are about numbered to the time when the sugar bush will come to life

bygone men who made New England fear God and nothing else. And in Vermont, the Puritan has made his last stand. In the interior towns of the State, more especially perhaps on the eastern side of the Green Mountains' range which forms the "backbone," survives as nowhere else, the Yankee, uncontaminated and undefiled. Perhaps the world may yet want to come back here to get seed of the men of that dauntless race.

In this region half way up the State and a little drive back from the Connecticut River, is a little village, West Stratford, unless my memory is wrong—and on a rise of ground in the fork of the road, stands one of those wonderful churches that the Puritan built. The edifice is astonishingly large—they told me there were 2,000 tiny panes of glass in its many windows. And within the memory of living men, the preacher looked out over a great audience of farmers and their folks filling its main floor and gallery. That was in the Golden age of the Church—an age that flowered in New England as nowhere else.

And behind the church, under white slabs of Vermont marble "The rude forefathers of the hamlet sleep."

I love to walk in old grave yards in quiet country places. The records there are brief, but wonderfully authentic and sometimes I can reconstruct history and sometimes I can

ence. It was this pitiless New England "Thou shalt" that made Vermont send to the Civil War more soldiers in proportion to her population than any other State. More than one half of all her men of military age were volunteered (not drafted) with the service.

It was this same New England ethical idealism—a spiritual inheritance from Plymouth Rock—which with the exception of a few large towns, has made Vermont "dry" since the mind of man runneth not to the contrary.

I suspect that it is this same stern uncompromising mentor that still impells Vermont men to go to the "town-meeting" and vote by word of mouth, aye or nay, on all town measures, and that permits every township in the State to send one Representative to Montpelier, the State Capital, and only one. Thus Burlington with 30,000 population, sends one representative and Glastonbury with thirteen voters sends just as many.

The Settlers of Northern New York

It was Vermont that a century ago felt she was already over-crowded and her swarming children "went West" around the northern fringes of the Adirondacks and settled the "North Country" of New York. Hence the North Country, true to ancestral habit al-

The Delayed Cattle Indemnities

ONE of the biggest reasons why it has been impossible to clean up tubercular cattle is the slowness of the State in paying indemnities.

It is nothing short of tragedy for a farmer to work a lifetime to establish a fine herd of cattle, only to lose them by the great scourge, and it is certainly the last straw to have to wait for six to eighteen months after his regular income has been shut off for the State indemnities.

There is absolutely no reason or excuse for this long delay. It is just as practical and just as easy for the Legislators to appropriate a sufficient amount in advance as it is to come dragging along months behind in the payment of the State's obligations. Appropriations made ahead so that the indemnities could be paid in thirty days would work miracles in helping dairymen to control a difficult, dangerous and discouraging situation. Ask your Assemblyman and Senator to give thought to this suggestion.

Farmers Still Read The Bible

A RECENT survey made by a Chicago publisher shows that of the approximately 23,000,000 families in the United States, only 15,000,000 own bibles. Of the 7,000,000 families without bibles there are very few in the rural communities. This will bear out the statement often made that country people are more religiously inclined than are city dwellers.

Since the bible was printed in the middle of the 15th Century, more than 660,000,000 have been published. This would give one bible to half the individuals in the world now, or more than two copies to every family.

The first bible ever printed is known as the "Gutenberg Bible," and is still in existence.

This bible is more than 450 years old. The first portion of the bible to be printed in English is "Tynsdale's Translation of the New Testament," which was published nearly one hundred years after the Gutenberg Bible. A number of copies of this translation are still in existence and our present authorized version, prepared during the reign of James the First, follows very closely the text of Tynsdale's first English translation.

Enforce the 18th Amendment

EVERY right minded citizen whether a resident of Pennsylvania or of any other State will heartily approve the determined stand of Governor Pinchot that there shall be no government by bootleggers in Pennsylvania.

It is about time that more Government officials and a larger public opinion recognize that the 18th Amendment to the United States Constitution is a law of the land and that therefore while it is, all violation of it is crime.

Low Labor Costs May Not Help

WHICH would you rather have, cheap labor and plenty of it and lower prices for your farm products, or high wages for labor, with correspondingly high prices for farm products? Those who remember the hard times of the 90's will have no hesitation in answering the question in favor of high priced times.

We hear a great deal of loud talk about the too-high cost of labor. There is no doubt that some labor does cost too much and that some classes of labor are not producing; but there is also no doubt that the working man who gets small wages is a mighty poor customer for farm products or for anything else.

Knowing this to be true, we refuse to get excited over the constant complaint of the high wages that the working man is supposed to get. We know it would be a calamity if labor prices in general went down too far. What is most needed is not a lowering of the wage earners' pay, but instead, a general raising of prices for farm products to be in line with what other business receives and with the cost of production.

The present hard times, bad as they are, are far better than the bad old days when plenty of labor could be had for \$18 a month, but when corn sold for 7½ cents a bushel that cost 16 cents to grow.

Daylight Saving Still With Us

IT certainly beats all how difficult it is for the world to free itself from the curses which the great war fastened upon it. Not the least of these is that of daylight saving.

To be sure every farmer, every traveler and more and more city people have come to recognize the foolishness and the economic wastefulness of the so-called daylight saving. But there are still many with powerful influence who insist on having daylight saving and we warn farmers to be on guard to prevent the return of this nuisance. No one should fool himself in thinking that he has seen the last of the absurd custom of tinkering with Father Time.

Credit the Farm Home

IN the large number of meetings to discuss the problems of the rural schools which the Committee of twenty-one has recently held, the statement has often been made that the rural schools should have the credit for the great progress made in every business and profession by the men and

women who come from the country. Rapid progress of country bred boy and girl should be credited not to the schools, but to the farm and to the farm home.

The farm chores have to be done on time. To do them on time it is necessary to "early to bed and early to rise" which Benjamin Franklin said "makes a man healthy, wealthy and wise." Getting up early in the morning may not necessarily make a man wealthy, but it is one of a long list of good habits which the exacting business of farming teaches. The boy knows the cows must be brought to the barn at a certain hour. The calves, the hogs and the hens must be fed, the eggs gathered and the wood brought in no matter what other business or pleasure intervenes. Doing these small home tasks at the same hours of every day, week after week, during the early years of life when character is formed, gives an education in responsibility that can be acquired in no other way. It is a training that no city home can give, no matter what its other advantages are, and unfortunately it is a training which many farm parents are now failing to give their children. Too many parents, themselves raised to hard labor and privation, are trying to save their children from this same hard experience when a little education in the "school of hard knocks" is just what the youngsters need. When mother washes the dishes while the daughter entertains company in the parlor, she is not helping that daughter to prepare for the later responsibilities of home making in which so many women of this day are sadly failing. Too many modern girls know more about playing than they do about cooking. Nor is father really kind to his son when he does the boy's chores that the boy may have more time to go skating or to get an early start to a party.

It is not to be inferred from this that young folks should not have a good time, but father and mother are entitled to one too. In sacrificing constantly to save children from every responsibility, parents may find when too late, that all of their sacrifice was in vain, and that by it they took from their children the most valuable thing that the farm home or any home can give them—early training to meet the responsibilities which life is sure to bring.

To Make the Public "Apple-wise"

AS everyone connected with the business well knows, certain varieties of apples are at their best only when eaten at certain definite periods of the year—and yet the average consumer, generally unable to tell one variety from another, much less to determine when it had best be eaten, loses the opportunity to so govern his apple buying as to get the maximum of satisfaction therefrom.

When it comes to advertising and sales, the Cooperative Apple Packing Associations of the Northwest are certainly on the job. One of their recent stunts is the publication of a beautiful chart, entitled "The Right Time for Every Apple." This pictures the ten principal varieties of apples grown and packed by the Wenatchee-Okanogan Cooperative Apple Packing Association in the State of Washington. Under each variety is its name and the months during which it can be eaten with the most enjoyment. For instance, *Jonathan*—October, November, December.

The slogan of the association, entitled "Delight in Every Bite," is featured, as is also the different brands packed by the organization. No consumer who sees this chart can help being impressed by it and with the need of getting to a fruit store as soon as possible to try out some of his newly obtained information. It pays to advertise.

"As A Man Thinketh, So Is He"

Beginning Readers' Discussions on the Country Church

THE sculptor carves out of enduring marble the image of his subject. The painter arranges in outline and tint the likeness of his model. Yet rare indeed is the writer who with his pen can erect the statue and in word picture present to the mentality of others, his own splendid vision and imagery of his hero. Such talent is the genius of Idealism.

In the January number of the American Agriculturist, Jared Van Wagenen, Jr., under the title "Where Have Men Like This Gone," deals with the character and life work of Rev. John Christopher Weiting. The real pathos of the article, is the potent, but subdued and pure recital of a local folklore. To the many who read that story, who never knew or heard of Rev. Weiting and his congregation will come a mental and romantic conception of the whole panorama covering forty years of time as though the author had designated the writing as fiction. Fiction excites imagination, fact in this case commands admiration. The infectious tinge of sympathy with passing associations, youthful memories, kindred ties, seasoned reverence and the instinct of hero eulogy, all unite to make a splendid perspective of the subject for an idealistic writer. It seems to me that this splendid vision of community life, would have been perhaps more pleasantly remembered with the shadows of the past resting upon it, than by comparing it with a different epoch in a changing light. The past is ever secure; the present ever changing.

Your editorial questions and courteous request for opinions upon the subject matter will reveal as much discord in sentiment as kindred theological and social subjects generally induce. The most senseless deceptive word ever coined is the nose-filling and twangy "Normalcy." There never was, nor never will be any such condition of stability. Religion is a state of mind, so was transportation by oxcart. Electricity is crowding to the front. The inter-allied church movement has failed. Dogmas and Creeds are ever, and ever have been, ready to split apart. There is no stability meaning (fixity) in mentality. What proof does the past furnish that religious convictions would be better if they stood still? If the sincere devoutness of Rev. Weiting was perfection in 1828 and for forty years, surely that perfection came out of terrible upheavels, and even then, was moving and surging in response to or against far away influences. Let us refer to unimpeachable history. The time was late in the Eighteenth Century. "The doctrine of Bossuet, that transubstantiation was affirmed in the Gospel, and the doctrine of Tillotson that transubstantiation is an absurdity when put together, produced by logical necessity the inferences of Voltaire. Thus two propositions each of which separately is compatible with the most exalted piety, formed when

held in conjunction the ground work of a system or irreligion." Thus the conflict of creed produced Atheism. The oldest civilization on earth has its religion established upon philosophy. Savage tribes, including the American Indian held to an allegiance with a Supreme power, but had no theology, yet he without a bible knew as much about revealed religion as the greatest divine. He knew just as much about the soul after death as any man knew. It has never been necessary for a fearless talker who was also a good psychologist to have religious convic-

It is no evidence that country people and city people as well, are not religious when they go or do not go, to hear political speeches, eugenics, sex problems and women's dress, lectured from the pulpit. The people know what they want and if they do not find it they stay away. Those who want society and display, find a fashionable church and try it on as they would a new hat. No religion? Well, just let a modern congregation sit on wooden benches for four hours and listen to an old-time minister with throat of brass and adamantine lungs, preach on foreordination, baptism of apostolic succession and ask their opinion of that religion.

The fact of the matter is that they are all right if they think they are, and that was ever true.

"As a man thinketh, so is he
Who is to try his conscience?
The working of his heart and mind,
Thou canst not see.
What in our dull brain may seem
stain—
In God's pure light, may only be a
scar,
Brought from some well-fought field
When thou wouldst only faint and
yield."

People are just as religious as they ever were if they think so, and just as ready to change

creeds, dogmas, ceremonies, as ever has been done, probably not as cruel to torture or condemn, not as melancholy, not inclined to exclusively listen to thunderous theology to the utter exclusion of the "still small voice" which gives assurance, aid and comfort in the realization of self effort well done. If theology is anxious for going back to the past, it is unfortunate in the inducements it presents.—JOHN L. WILSON, Titusville, Pa.

A Gloomy Picture

IN my judgment, the present day careless attitude toward religion and the church in rural communities is due to causes over which we seem to have no control.

If you will recall your early life on the farm, I think you will remember that in those days there were few attractions that drew us away from the old home life. In those days there were no autos in which to ride for miles, over dirt or mud roads. Then too, each neighborhood had within its borders a large number of well-to-do families, who owned their homes. There were many children in these homes. To-day as a rural mail carrier, I ride through a section of the country where at one time many people lived. They had good homes and large families, and they all seemed to have a common interest in the community life. All of this is gone now; those that now are working these farms are doing it in a half-hearted way. Some places are deserted or are being worked by someone who does not own them and does not care about the place.

(Continued on page 170)

Farmers Can Write

THE response to Mr. Van Wagenen's article and our editorial on the Country Church has over-whelmed us. Over 250 letters have been received, showing the tremendous interest in this vital subject. The great number of letters and their high quality has made it impossible for us to judge them in order to announce the prize winners in this issue. Some good letters are being published on this page. These letters are not necessarily the prize winners. Those that we think are the best will be announced in our next issue. In the meantime, we want to take this opportunity to acknowledge receipt of all the fine letters about the Country Church. They make us more certain than ever that the farmers themselves can write the best and most interesting material for farmers to read.—THE EDITOR.

tions in order to make so-called converts or originate sects. A knowledge or knack of rousing excitement and frenzy that is inherent in some form in all men, has often been too readily mistaken for zeal and fervor. Touch a lighted match to a stack of wet straw, and touch another to an oil tank. If the straw did not burn and if the oil did burn, questionable logic indeed would give the whole blame or credit to the matches. But put the oil in the straw and either match would burn both. Who can say that the clown exhorter Billy Sunday did not have "the power" when he tore off coat and collar and challenged the devil to fight? He swayed thousands of men, women—and dollars to the sawdust trail, in comparison with dozens and a meagre living by the old-time preachers, who were correct in deportment and orthodoxy.

"Far from the madding crowd's ignoble strife,
Their sober wishes never learned to stray"

Do Your Seedings Winterkill?

Millions of dollars are lost by farmers because of winterkilling. The U. S. Dept. of Agriculture, several Agricultural Colleges, and numerous farmers have proved that much of the winterkilling of Clover and Alfalfa is due to the use of unadapted seed.

G. L. F. Seeds

High Quality—Known Origin

are produced by various Pure Seed Associations and leading individual growers located in America's best and hardest seed producing sections.

G. L. F. Alfalfa Seed

comes from the fields that have successfully withstood the severest of winter and spring conditions for 25 to 42 years, and are still yielding profitable crops of excellent hay.

G. L. F. Clover Seed

is carefully grown and harvested to prevent damage, and cleaned by the best equipment operated under our supervision.

We have a full line of field seeds. A real bonafide guarantee with every bag.

New York Farmers Praise G. L. F. Seed

"We have distributed G. L. F. Seeds to more than 100 farmers the last two years, and have heard nothing but praise for them."

Thomas L. Regan, Camden, N. Y.

"I have sown G. L. F. Seed for two years and the Clover comes thru the winter the best I have ever had."

D. J. Hollis, Lacona, N. Y.

"Formerly while using seed purchased locally, I was troubled by the Clover winterkilling. Since using G. L. F. Seeds I have had no such trouble."

W. J. Suits, Camden, N. Y.

"Have used G. L. F. Seed for two years and cannot praise it too much. It is the best seed to be had and I would not use any other. Seven acres averaged over five tons per acre of Choice Clover Hay."

E. L. Squires, Massena, N. Y.

Peaches Make Profits

This fruit of most uses is always in big demand. Even a few trees will prove remarkably profitable—for the big baskets of juicy fruit they give you will be far more than sufficient for home use, either fresh or preserved. Eager buyers take your surplus, at good profit to you.

Collins' 1923 Planting Guide

Lists all the standard varieties of peach trees at attractive prices, together with apple, pear, plum and cherry trees, berry plants, ornamental nursery stock, evergreens, privet, etc. If you favor fruit or are interested in all growing plants of utility and beauty, have us send a copy to you, FREE. A postal brings it.

ARTHUR J. COLLINS & SON
Box 40 Moorestown, New Jersey

Yankees, Cows and Maple Sugar

(Continued from page 159)

most universally builds town halls, a custom uncommon in other parts of the State.

It is fashion to say that Vermont is decadent. A very famous woman author with perhaps more sentiment than sense has made the phrase, "Beautiful, dying Vermont." It is true that along with two other commonwealths, Nevada and Mississippi, she shares the distinction of being one of the three states that lost population in the decade 1910-1920. But this means nothing more than that she is chiefly an agricultural community with no large and growing cities.

As a matter of fact, nearly all exclusively agricultural regions tend to decline in population. During those same years 33 of our New York State counties lost population and one of them was little old New York County, because more and more lower Manhattan Island is becoming a place to work but surely not to live. Its decline in population necessarily means decadence, thus the situation is bad enough for during that decade Ulster County in our State lost 18.4 per cent and my own good County of Schoharie has barely 60 per cent of the people she counted in 1860, the census date that represents the high water mark in most rural New York counties. If I were a Vermonter, I would not let a little loss in members worry me. There are only a third of a million of them all told any way but among them there is a very large proportion of the finest racial stock, the world ever knew—the Puritan.

Coming Back to Maple Sugar

Well I started to say something about maple sugar and instead I have been dreaming of the "Bashful State."

Just a little concerning maple trees and sap buckets for March is almost here. The Maple Products Association put on a wonderful exhibit of their wares—"Maple honey" and confectionery in great variety and syrup that was transparent and sugar that was white almost beyond belief. They told me there was at least a thousand dollars, worth shown in these exhibits. The prize winning booth carried the very appropriate quotation "The Trees of the Lord are full of sap."

When I hear a technical discussion of modern syrup making, I realize that we have "gone some" since the days when we boiled sap in a potash kettle with a hunk of fat pork hung above it at a point that would be reached by the mess before it frothed over; then finished up on the kitchen stove and sugared off when it "bubbled like sup-paw" and would "hair in the wind." Listen to the directions how to finish syrup as announced by a professor of the college. "High class maple syrup should weigh eleven pounds to the gallon of 231 cubic inches. This corresponds to a specific gravity of 1.32 or to 36 on the so called Baume scale. The best way to determine when it is boiled enough is by the use of an accurate and tested thermometer and when finished it should boil at a temperature just 7 degrees Fahrenheit above the boiling point of pure water in that locality, remembering that while water boils at 212 degrees at sea level. It may boil at 210 degrees or 211 degrees at the high elevation of some sugar camps."

I listened to one noteworthy address—the results of a most exhaustive study of the cost factors in the industry, the survey being made by the Farm Management Department of the College. The survey covered two years and the researches included about 60 different producers with orchards of various sizes. I cannot report this address but only set down a few of the outstanding figures and conclusions.

Taking the average of all these producers and expressing it in terms of units of "per thousand buckets hung" the figures are these: The average value of the trees for one thousand was \$1,400. This was of course, the owner's own appraisal. The average production per 1,000 buckets hung was 201 gallons and the average sum received from its sale was \$368.00.

The average consumption of fuel to boil this syrup was 18 cords of low grade wood. The average value of equipment for 1,000 buckets was \$882.00 surprisingly large it seemed to me.

The average cost of man labor per hour was estimated at 21.4 cents—surely low enough. The average cost of horse labor per hour was given as 19.4 cents—perhaps more than it was really worth this time of year.

Based on these factors, the average cost of syrup was \$1.68 per gallon and the average selling price

received was \$1.83 or a net profit of 15 cents per gallon. Surely, making maple syrup is not a get-rich-quick proposition. The margin is much smaller than I would have expected. Indeed it is so small that if you have any really profitable job you better forget the sap bush. On the other hand, you will be considerably better off to "tap" than you will be if you let the horses stand idle in the barn while you sit by the fire. Or you may think of it in this way. That the main advantage in having a sugar bush is that it gives a man a profitable opportunity to labor at a time of year when perhaps he would not be otherwise employed.

In any case, Vermont believes in the maple tree. She leads every other state, some years tapping very nearly six million trees, while New York comes next with nearly five million.

No Worry for the Future

Surveys indicate that Vermont has enough young trees coming on to maintain production in future years. The average estimate was that trees ought to be ten inches in diameter before tapping and that this size ought to be reached in about 30 years. The state has one orchard of ten thousand trees, the largest in the world.

In any case, in the minds of most people, really high class maple products will stand forth as about the most absolutely delicious of all the fruits of the earth.

The man who goes around in the spring of the year with a brush and bucket of paint in his hands may not present the best appearance all the while, but he is certainly saving money by painting whatever needs it about the place, whether it be building, farm machinery or the front fence and the gates.

Improved and Pedigreed Seed

PEDIGREED BARLEY, Cornell's two favorites. FEATHERSTON No. 7, six row. ALPHA, two row. For description see our advertisement February 17th issue or send for circular. Price, Featherston No. 7, \$2.00; Alpha, \$2.25.

PEDIGREED SEED OATS, cleaned through thoroughly equipped warehouse and treated for prevention of smut. Varieties—CORNELLIAN, VICTORY, CROWN and GOLDEN RAIN. For description see our advertisement February 17th issue or write for circular. All varieties, \$1.50 per bushel.

SEED CORN, New York State grown from selected ears in special fields.

Pedigreed CORNELL ELEVEN and Improved OIL DENT. For description see our advertisement February 17th issue or send for circular. Screened, \$3.00 per bushel. Tipped and butted for accurate planting, \$5.00 per bushel.

CERTIFIED SEED POTATOES, HIRUCO NUMBER NINES for seed plots, \$3.00 per bushel. GREEN MOUNTAINS and IRISH COBBLESTONES treated seed, \$3.00 per bushel. BLISS TRIUMPHS special stock treated, \$3.50. In bushel boxes, \$4.00. For description see our advertisement February 17th issue.

SOY BEANS, Black Eyebrow, an early sort. Bids fair to be most popular sort in New York and Pennsylvania. Price, \$4.50 per bushel.

HUBAM SWEET CLOVER, Scarified, high germination and purity. Grown in New York. Price, small lots, 50 cents per pound, postpaid. Bushel lots or over, 40 cents per pound.

All prices bags free, freight paid. All orders to be accompanied by 25% cash. 3% may be deducted if sending all cash with order.

Investigation through Farm Bureau or Agricultural Colleges invited.

What Corn Shall I Plant?

Farm Bureau Tests Demonstrate the Paying Varieties

EVERY dairy farmer realizes that there is remarkable difference between individual cows, even though they may be given the same care, and most dairy farmers realize, too, that these differences are very likely to be transmitted. Few of us would venture to say that there was an equal difference between two strains of corn, and that, too, these variations are not only likely, but are almost certain, to be transmitted. Results of corn variety tests show as much as 50 per cent difference between standard varieties and strains.

John C. Cheney is a prominent farmer of Chautauqua County (N. Y.) and a leader in his own community and county. He has always taken a good deal of pains with his corn, and during the past 20 years had tried several varieties to find ones that gave him better results than Luce's Favorite and King Phillip.

Having heard the county agricultural agent speak about making some arrangements for corn variety demonstrations, Mr. Cheney offered to run such a test on his farm. The field

of each kind laid out along the main road made an interesting demonstration. Mr. Cheney says that more people stopped to see this demonstration during the summer than he had supposed would even notice it in passing. From the auto license plates of those who stopped, it is apparent that many from outside the county and State were interested.

Among the larger groups of visitors with whom Mr. Cheney spent some time to explain the details of the test were the Western New York county agricultural agents, the annual farm management auto tour, and a group of farmers from Erie County, Pa. As the season progressed, Mr. Cheney found that each day he had several opportunities to talk with some one about it. Occasionally he had difficulty in getting his work done, but he felt that it was a worthy cause.

Early Season Observations

Within six weeks after the corn was planted, some apparent differences began to develop. The first fundamental

A portion of Mr. Cheney's variety test. Mr. Cheney on extreme right

which he proposed to use was located on one of the main improved highways of the county, and proved to be an ideal place for one of these tests. Mr. Cheney, by the way, has a reputation in his community and county as a good corn grower.

Sixteen varieties of corn were used. Eleven of these came from the Plant Breeding Department of the College of Agriculture, where they had been assembled for this purpose. These eleven varieties were from the best known seed sources, and represent the best that are available at the present time. The other five kinds were collected locally except Bloody Butcher, which was purchased from a local merchant.

The soil on which this test was located was very uniform in character and had a gentle slope toward the west and the shore of Chautauqua Lake. The texture of the soil was ideal for corn, being a gravelly loam and in an excellent state of fertility. In this section of Chautauqua County the average growing season is about 120 days, but it is often impossible to give corn that danger of the seed corn rotting in the cold ground.

This particular piece of soil warmed up rather quickly, however, and the corn was planted on May 10. The few days that followed proved to be good corn weather, and all the seed germinated well.

All through the early part of the season the field was uniform, little difference appearing until the corn was over a foot high.

The Layout of the Test Plot

The corn was planted in check rows, three feet apart each way, and five kernels were planted in each hill. All these details were personally supervised by Mr. Cheney, and great care was used to give each variety an equal chance.

The corn was planted by hand and hoed twice during the early part of the season, which gave it a quick start and left no weeds to compete. The varieties were chosen at random, six rows of each variety being planted.

Sixteen kinds of corn with six rows

difference came, however, when the early varieties began to tassel. The order in which the different kinds tasseled is shown in the list of varieties arranged according to the days to maturity. All of the varieties except Leaming were practically mature on September 10, 120 days after it was planted. All varieties were harvested on that date, and with the exception of Leaming, Bloody Butcher, Sweepstakes and Long Island Luce's Favorite. They were all allowed to mature in the shock. The order in which they matured was as follows:

King Phillip.
Smut Nose.
Cook's Cross.
Alvord's White Cap Dent.
Webber's Dent.
Early Huron.
Home-grown Cornell 11.
Cayuga County Cornell 11.
Onondaga White Dent.
Hall's Gold Nugget.
Cornell 12.
Home-grown Luce's Favorite.
Long Island Luce's Favorite.
Bloody Butcher.
Westbranch Sweepstakes.
Early Leaming.

A large proportion of the corn grown in New York State goes into the silo. There is some difference of opinion as to the stage at which the corn should be to make the best silage, but the majority of progressive farmers favor that stage which will give them an excellent quality succulent feed and still contain as high food value as possible. That there is a very great variation in the dry matter in different kinds or varieties of corn was shown in this test.

Each kind was weighed on the afternoon it was cut. Four shocks of each variety was weighed in order that the chance for error might be small. These four shocks were then placed in the barn and allowed to cure for three months. After three months Mr. Cheney felt that they had reached a uniform moisture content, and they were weighed again. During that period the smallest loss in weight had been 51 per cent, with Cornell 11, and the highest had been 70 per cent, in

Do your crops bring top prices?

The best grades of any crop fetch the big prices. Intelligent use of commercial fertilizer will not only increase your yield per acre, but will better the grade. For instance, the Ohio Experiment Station found a yield of 8.4 bushels of wheat, with 49% shrunken kernels when no commercial fertilizer was used, while the yield was 28.33 bushels with only 16% shrunken when a reasonable amount of fertilizer was applied. Potatoes are larger and more mealy, and corn is better filled out and the kernels larger, when suitable commercial fertilizer is added. Royster's fertilizers represent 40 years experience in furnishing properly balanced plant food for the various crops. They merit your confidence. It will pay you to learn the true story of fertilizer. Write freely to F. S. Royster Guano Co., Baltimore, Md.

ROYSTER

Field Tested Fertilizers

MICHIGAN LIMESTONE CUTS DOWN FEED BILLS

A ton of MICHIGAN LIMESTONE will grow on the average, two tons of good clover hay.

Two tons of good clover hay are equivalent, in feeding value, to two tons of bran.

Use MICHIGAN LIMESTONE to grow good clover hay and cut down your feed bills—

AND DON'T FORGET—

These two tons of good clover hay have put two tons of Plant Roots—Fertilizer Material—into your soil. This is why you get better crops following clover.

"MICHIGAN" is the only Agricultural Limestone thoroughly washed and dried before pulverizing. It contains no foreign waste material and is guaranteed over 99% Carbonate.

Michigan Limestone & Chemical Co., Inc.
BUFFALO, N. Y.

Largest Agricultural Limestone Mill in the World.

Fertilizer Foresight

Early Buying the Only Safe Way

By PAUL WORK

NO permanent program for maintaining soil fertility can be built upon commercial fertilizers alone—unless we except the muck soils, which consist largely of decaying vegetable matter. On the other hand, the increasing scarcity of manure has led the commercial vegetable grower to depend more and more upon the concentrated plant foods for crop production. With fertilizers as with seeds, it is necessary to work out requirements well in advance and to place orders early.

PAUL WORK

In this way the gardener has the advantage of more thoughtful planning, of ability to get just what he wants, and of a more favorable position for securing price concessions. If one waits till planting time, he must use the material that is available in a nearby town. If the local dealer has 4-8-7 and he wants 4-12-4, he is "out of luck." The early buyer is able to assemble his needs into one large order, and he has time to correspond regarding prices and sources. There is time also to join a buying pool, or for several neighbors to get together and order a solid carload of assorted items, so saving in both price and freight.

Fertilizer buying is easier than seed buying. The value and adaptation of the different varieties are more definitely known. After a few years of experience and consultation with neighbors and specialists, one can build a fairly definite program for his own land and crops, though, of course, some quotations will remain unanswered.

Home mixing should be carefully considered by vegetable men on account of the saving in cost and because it is thus possible to know not only the analysis, but also the sources.

Food for Cabbage Thought

Three dispatches do not make a market, but three items appearing in the New York Packer for January 27, throw some light on the close of the late cabbage deal in Wisconsin and New York. The first reports advances at shipping points of \$10 per ton in the former State, adding that the total of remaining stock probably amounts to 225 cars, nearly all in the hands of a few large operators. Two reports from New York conflict slightly, perhaps because one writer is a little more of an optimist than the other. Advance in loading point prices to \$15 or \$18 has encouraged shipments and supplies seem liberal. Shrinkage this year has been heavier than usual on account of the stock being overripe at storage time. The average is said to be close to 25 per cent, with the range from 15 to 30 per cent. It is not hard to see how the 15 per cent man might make money and the 30 per cent man lose. Such is the difference between men and between the sort of storage conditions which they provide. It is expected that present prices will bring about fairly rapid movement of remaining stock.

Federated Fruit and Vegetable Growers, Inc.

Wide publicity has been given during the past few weeks to the establishment of the Federated Fruit and Vegetable Growers, Inc. This is a nationwide cooperative which has come into existence through the efforts of the National Fruit Committee of the American Farm Bureau Federation. Since the fruit and vegetable fields find much in common in their marketing problems, the project was extended to include both groups. The new concern has taken over, lock, stock and barrel, the North American Fruit Exchange, which has maintained a national selling organization for the past 12 years. The new organization is to handle carlots for local cooperatives and large individual growers.

Many growers and seedsmen are offering Washington Asparagus seed and plants. This variety was originated by Prof. J. B. Norton while he was with the United States Department of Agriculture. The work was done at Concord, Mass. It takes some years to try out a strain of asparagus; also pollen is carried by wind for long distances. Hence it is well for the buyer to be sure that the stock offered is genuine and that its purity has been properly safeguarded.

Watering the Young Plants

Recently attention was called to the part which the character of the soil plays in regulating the water supply of young plants growing in greenhouse or frame. After all, the most important factor is the man at the end of the hose. This gentleman has the opportunity to advance or retard growth, to discourage damping off and to encourage hardening. His eyes must be wide open to see the weather, the progress and condition of the plants and the condition of the soil.

The general rule calls for morning watering. This gives the plants chance to recover from the shock and chill, and it permits the surface of the soil to dry off somewhat before night. High temperature and abundant moisture are two factors that greatly favor the damping-off fungi which attack the stems of young plants at the base. Afternoon watering may be necessary after plants have become large, when strong sunshine makes the demand especially heavy. In cloudy weather small plants may often go for several days without water.

The skilled hand at watering soon senses the need of the plants much as he does his own needs. As he moves along with his hose, he is conscious that the seedlings at the edge of the flat or bed are a trifle smaller, or that certain spots of soil dry out a bit more quickly than others. His seeing eye catches these differences, and his guiding hand supplies the extra need long before it could be discerned by the visitor. Thus the plantman makes every condition as perfectly uniform as possible, and then, in watering, he has the opportunity to make adjustments here and there throughout bed or house that could never be controlled by temperature, soil or ventilation. The result is not only excellence, but also uniformity in the finished plants.

Foreign Apples Hurt Danish Orchardists

A recent dispatch from Washington states that farmers in Denmark are taking out their orchards to plant potatoes and other more profitable crops. Southern European apples, added to competition from America and Australia, have made it unprofitable for the Danes even to pick their crop, it is said.

The fruit growers of British South Africa claim they can supply all the big markets of the world with fresh fruits in the middle of our winter as soon as they can get refrigerator steamers to carry them. The African fruits arrive in England when other fresh fruits, such as peaches, plums, nectarines and melons are not available. In 1921, 806,891 boxes were shipped from Cape Town.

Honey Producers Looking Toward Export Market

Interest is being shown by New York State honey producers in export outlets for honey in Europe. A recent Canadian government trade report states that in 1920 Great Britain received 5,302,100 pounds of honey from foreign countries, of which 1,900,100 pounds came from Chile and 7,716 from the United States. There is considerable production of honey in the United Kingdom itself.

British imports of honey are invariably packed in barrels, kegs or tins. Popular packages are the 300-pound barrel and the 150-pound keg. Most of the Californian and Australian honey is received in cases containing two tins, each holding five gallons (60 pounds). This honey is imported mainly

by brokerage and merchant firms, from whom the wholesalers and blenders purchase their supplies and repack in glass receptacles.

The value of honey depends almost entirely upon the quality of the individual sample, and important factors are whiteness of appearance and flavour, which should be delicate and free from strong influence, like peppermint.

DWARF TREES NOT PRACTICAL

Dwarf apples have a certain appeal for the amateur fruit grower and for the home garden, but they have no place in commercial orchards in our Eastern States. It is true that dwarf trees have many advantages, aside from their small size, which consumes little garden space, and the amateur may find them to his liking. Even the best of the dwarf varieties, however, are weak and they are not adapted for large plantings.

Some years ago it was hoped that dwarf varieties could be made a commercial success and repeated efforts in New York State and elsewhere have been made to prove the possibilities of their use, but the experiment station at Geneva, N. Y., as one authority, has shown that dwarf apples cannot be made a commercial project on farms. For a very small orchard or in the garden, however, the dwarf apples make possible a greater variety of fruit than if standard size trees were grown. Some of the varieties are attractive ornamentals, if properly cared for, and so add to their usefulness for home planting.

Varieties Not Different

There is a general belief that dwarf apples are of different varieties and characteristics than our standard sorts, but this is not necessarily the case. The dwarf trees are merely those which have been made to grow smaller than normal trees of the same variety, and, although generally lacking hardiness, they may be fully as healthy and may produce fruit of the same size and quality as their bigger brothers. The dwarfing is usually accomplished by grafting scions or cuttings from standard varieties on some root stock which dwarfs the top.

To secure true dwarfs, summer pruning is usually necessary in addition. The standard scions grafted on so-called Doucin and French Paradise stocks usually produce a good dwarf and these stocks are now widely used. Trees grown on the French Paradise stock are true dwarfs, while those of the Doucin stock are only half dwarfs. It is true that the dwarf apples bear slightly earlier than standard sorts, but not enough so to make them any more desirable commercially.

PLAYS FOR RURAL PEOPLE

A new style of play is here for country audiences. The city-made plays, like the city-made school books, are passing. A new type for both have come. When several years ago there was published a three-act play called "Between Two Lives," there was ushered in a new form of drama and a new era of play acting for dramatic expression in the country that will have far-reaching results. The wonderful success of this play on the amateur stage has led to the production of many others of a similar nature that now makes it possible for every country district to have its dramatic club for the entertainment of its own people, interpreting the life and manners of farm people that leads to elevation, farm contentment and the glory of the farm home. Following the publication of "Between Two Lives," has come another worthy pioneer, "The Cross Roads Meetin' House," a three-act play that presents the problems of the church in rural communities, pleasingly and sympathetically interpreting the life and characteristics centering about the historic communities of rural America. Two other pleasing one-act plays with a country flavor and high dramatic interest are "Don't" and "The Will."

New York Farm News

Senate Acts Favorably on the Coliseum

THE Senate has passed a resolution to amend the Constitution making the term of Governor four years; also to amend the Constitution establishing a Budget System in the State.

In the joint session of Senate and Assembly, William Bondy of New York was reelected as regent of the State University of New York, Thomas Monroe of Camillus was elected as member of Council of Farms and Markets from the 5th Judicial District.

WESTERN NEW YORK

Ontario Co.—We are having lots of snow and cold weather this winter. There are lots of auctions and things are selling fairly well. Some farm implements are going quite cheap. Pigs and sheep are high and scarce. Horses are low in price and cows are holding fairly steady—H. D. S.

Chautauqua Co.—During the second week in February we had the coldest snap of the winter. We have been having a great ice weather, but not many farmers are putting up a supply of ice against the hot weather of next summer. An ice house is something quite unknown in this community. The dairymen would rather have their milk rejected at the condensery and then kick at the Borden Company for rejecting perfectly good milk. Milk and fuel are about the only farm products that are bringing satisfactory prices. Wood is selling in nearby towns from \$3.50 to \$5 a cord. If it were not for timber, many farmers would find it pretty hard to pay taxes.—A. J. N.

Genesee Co.—The towns of Stafford and Batavia are covered with nearly two feet of snow. It is an excellent protection for wheat, which in many cases suffered from frosts and dry weather during the early part of the winter. The State Road from Leroy to Batavia has been cleared for auto travel. From there on to Pembroke there is much snow to be removed. The country roads in the country are still full of snow, and some of them have been impassable for some time. Many farmers are complaining because prices are still below cost of production. On the Batavia market potatoes are bringing 40 to 50c a bushel; cabbage, \$13 a ton; beans, \$7 per cwt.; yellow eyes, \$6 per cwt.; hay, \$8 @ 11 a ton; alfalfa, \$10; butter, 46 @ 47c; eggs,

mixed colors, 40 @ 43c; hogs, dressed, \$9 @ 10; hogs (live), \$7.50 @ 8.00; dressed calves, \$16; live poultry, 21 @ 23c; dressed roosters, 24 @ 26c; wheat, \$1.50 a bushel. The storms during the past three weeks have been the most severe in Genesee County for many years past.—J. E. B.

ALONG THE SOUTHERN TIER

The campaign for Farm Bureau members now in progress in Broome County has netted up to date 457 members. Eight hundred and seventy-one farmers have been visited by the two canvassers in the field.

A veterinarian has been engaged to test cows in this county for tuberculosis.

COLISEUM NECESSARY

AS we go to press, we learn with pleasure that the bill to appropriate money with which to build a coliseum has passed the Senate unanimously. Now it is up to the Assembly to do the same.

The American Agriculturist has worked hard for over two months to bring the National Dairy Show and the World's Dairy Congress to Syracuse. When we were convinced that without a coliseum these two great expositions might go elsewhere, we decided to lend our support to get a coliseum built in time to clinch these expositions for New York State.

Fourteen G. L. F. agencies have been established in Broome County as follows: Charles Peters, Castle Creek; Tymeson Bros., Maine; Floyd R. Allen, Sanitaria Springs; D. S. Wakeman, Vestal; A. H. Whitaker, Binghamton; Frank Warner, Tunnel; Floyd Bell, Windsor; A. L. Meeker, West Windsor; Ed. Hartz, East Windsor; W. R. Faulkner, Kirkwood; J. R. Harshaw, Chenango Forks; E. S. Haver, Killawag; Wilder Milling Co., Chenango Forks; Tri-county Mills, Deposit.

Lack of hired men is hampering many farmers in their winter work of wood cutting, ice gathering and dairying. It seems quite impossible to find reliable help. The shops at Endicott swallow all the young men and women up, and after a time they will wish they had stuck to the farm.

A meeting of representative members of the Dairymen's League, Inc., was held in Binghamton, January 8, to arrange for the showing of films descriptive of League work. Considerable interest is being manifested in this work.—E. L. V.

NORTHERN NEW YORK NOTES

While the financial condition of farmers is anything but satisfactory, a change in the general feeling is becoming apparent. There is more optimism being expressed as to the future at milk stations, stores, and other

Here are the junior project scholarship winners who completed their first winter course at the New York State College of Agriculture, last week. The second from the left is Raymond Phillips of Ontario County, who won the American Agriculturist Calf Club Scholarship. The others are winners of scholarships sponsored by the New York State Banker's Association. They are, left to right, Charles Walls, Nassau County; Melvin Dewey, Delaware County; Everett Hall, Oswego County; and Charles Potter, Delaware County.

meeting places than has been the case for over two years. The decision of Referee Merwin establishing the legality of cooperative marketing of milk has created much comment, and will probably have an effect on the number of withdrawals from the Cooperative during this month. The general feeling now prevailing seems to be that there will not be nearly the withdrawals that was forecast in the summer in this part of the State.

A thaw in January brought sufficient water to relieve in many cases the water shortage, and raised the ponds and creeks enough to permit ice cutting, which is now in full swing. Ice ranges from 12 to 20 inches and is of fairly good quality. Unusually high gales have kept the roads drifted full, causing the railroads much trouble and making it impossible for busses on the rural routes to operate at times. An 11-ton outfit, consisting of a plow 10 feet in height mounted on a truck, has been giving good service on a 75-mile route.

Oats are moving slowly at 50 cents. The hay market is sketchy, with few sales and prices ranging from \$10 for lower grades to \$15 as the very top figure. Not many potatoes being offered. Cash prices for strictly fresh eggs run from 45 cents down. Chicken thieves have raided many roosts. Woodlot owners are taking advantage of the market brought by the fuel shortage, and are selling their wood in stove cords. Prices are \$5 to \$6.50, delivered.

Jared Van Wagenen, Jr., the well-liked Schoharie farmer, with his whimsical style of address that cannot be imitated, has been speaking at community meetings held under the direction of local Farm and Home Bureau and Grange committees. At two places men drove long distances to "see if he looks like his picture in the American Agriculturist, and whether he talks as good as he writes."—W. I. R.

Franklin Co.—Farmers are busy putting up their ice and cutting wood, which has been selling for \$3.50 a cord, delivered. Cows are freshening now and the milk supply is considerably increased at our local plants. Dairy-men were much more satisfied with the prices paid for December milk than in many months. It is believed that most farmers in Franklin County will stay with the League again this year, with some new ones to come in. Most farm produce is low in price. Potatoes 40c, oats 55c, wheat \$1.25, hay \$18, eggs 40c, beef 5 to 8c, hogs 15½ to 16c.—H. T. J.

St. Lawrence Co.—The ice harvest is in full swing. There will be very few withdrawals from the Dairy-men's League. Not all of the members are satisfied as yet, but are looking for better things in the future. Eggs are very plentiful and are bringing 45c. Hay is holding out fairly well. We have had lots of snow, and the weather is cold. Roads are being kept open fairly well, making auto traffic possible.—H. S. H.

LONG ISLAND DUCK GROWERS HAVE SUCCESSFUL YEAR

The Long Island Duck Growers' Cooperative Association started its spring shipping with nearly 3,000 live ducks in January. Although market prices of other live ducks have fluctuated continually the Long Island Association have been able to keep a fairly even price during the entire year by superior quality and orderly marketing. Their own representatives in the market has gauged the demand daily and had complete control over quantity shipped by members and the price. Their policy has been to send each week just what the market would clean up, regardless of inducements offered by buyers. The standards of grading of the Association are very rigid. Scientific feeding has largely eliminated shrinkage. They estimate their crop this year at 2,000,000 head, of which about 300,000 will be shipped alive.

Kicked from the Chaff

It is just as important to hustle when marketing as when growing the crop.

* * *

Disking in the manure before plowing helps to assimilate it with the soil.

* * *

The hen will go to the barn to lay because she finds there a soft bunch of hay.

LOOK FOR THE RED WHEEL

Read the "Lorain" Guarantee

BECAUSE the short chimney oil stove burner produces an intense flame which strikes directly on the bottom of the cooking utensil, the heat generated has, in the past, caused the early destruction of its vital part, the inner combustion tube.

This fault has been completely eliminated in the Lorain High Speed Oil Burner by making the inner combustion tube of "Vesuvius Metal" which is not affected by the destructive action of this intense heat.

Therefore, American Stove Company now gives the following unconditional guarantee with each Lorain Oil Burner.

Guarantee Should the inner combustion tube of the Lorain High Speed Oil Burner burn out within 10 years from date of purchase, replacement will be made entirely free of charge.

Flame Strikes Against Cooking Utensil

If you want an Oil Cook Stove that cooks as quickly and as well as a Gas Stove you must get one with a short chimney burner, where a clean, odorless, blue flame strikes directly against the cooking utensil.

For more than ten years the Lorain High Speed Oil Burner has given perfect satisfaction in thousands upon thousands of homes. It gives an intense heat. It's easy to operate. It seldom gets out of order, or needs cleaning. The wick won't stick, and the vital parts won't burn out. Read the Guarantee.

Many famous manufacturers of oil cook stoves now have adopted the Lorain High Speed Burner as standard equipment. Among these many makes you'll surely find a stove that will exactly suit you in size, style, color and price. If you can't locate a dealer near-by, write us, and we'll gladly send you the name of the nearest one.

Important

Every oil cook stove equipped with Lorain High Speed Burners has one interchangeable Giant Chimney which makes any standard Lorain Burner a Super-heating Giant Burner—an entirely new principle in Oil Cook Stove Construction.

Special Features

Patented Wick-Stop stops wick at correct lighting and burning point

"Boil-Overs" Can't Reach Wick

Wick Seldom Requires Trimming

A COMPLETE POULTRY LIBRARY

Following are five books on the poultry industry that cover the subject not only in a scientific, but popular and practical manner. It deals thoroughly with every phase of the poultry business. This set of books should be in every man's living room or library, who has a poultry business of any size at all.

MATING AND BREEDING OF POULTRY

By Harry M. Lamon and Robert R. Slocum. This book, may be properly termed the "Key to the Standard." It describes in detail the proper matings to secure birds that approach the ideal. Every follower of poultry shows should have this book. \$2.50

POULTRY BREEDING AND MANAGEMENT

By James Dryden. A very recent book written for the man or woman on the farm or in the poultry business who is interested primarily in making poultry pay. \$2.00

AMERICAN AGRICULTURIST, Inc.

POULTRY FEEDS AND FEEDING

By Harry M. Lamon and Alfred R. Lee. A book just off the press that covers the subject of economical and proper feeding from the very standards. The authorities are practical and expert poultrymen. \$1.75

DUCKS AND GESE

By Harry M. Lamon and Robert R. Slocum. A most complete, practical and helpful book on this popular subject ever written. This is the most recent publication on the subject and covers every phase of it. \$2.00

TURKEY RAISING

By Harry M. Lamon and Robert R. Slocum. No turkey raiser either experienced or beginner, can afford to be without this new book on the subject from the pens of two of the foremost poultry authorities in the United States. A complete treatise on the subject. \$1.75

Canada Offers Farmers their chance to get ahead

IF your hard work and investments are not giving you the return they should—if high land prices and high rentals are blocking your road to Success—if you are beginning to see how hard it is to compete with low-priced lands that are equally fertile, you owe it to yourself and your family to get the facts about farm opportunities in Canada. Lower-priced land—lower overhead—lower taxes and operating costs—may be the solution of your problem.

Low-Priced Land—the Secret

Virgin prairie land at \$15 to \$30 an acre, with long terms, if you want them, close to railways and market towns, schools, churches, telephones, highways—these vast virgin prairies offer you the last great farm opportunity. The fortunes of the United States were built on low-priced land. Those lands are now dear—perhaps beyond your reach—but Canada's lands are still low-priced. You may have missed the first chance—don't miss the last.

Your Own Farm—Prosperity, Happiness

The opportunity that fits your particular financial and family needs awaits you in Canada, and the Canadian Government Agent will help you find it. Land of great and continuous fertility, (Western Canada's wheat crop in 1922 was the biggest in history), land suitable for stock-raising, dairying, mixed farming, fodder crops, market gardening, to suit your experience and your pocketbook. Land that will pay for itself in a few years' crops; hundreds of Canadian farms have produced crops in one year worth more than the price of the land.

Rent If You Prefer—Pay Out of Profits

The Canadian Government has devised a means by which you can "try out" a farm for a year or two before investing, and at the same time increase your capital for the day when you are ready to buy a farm of your own. Many Canadian land owners are willing to rent a portion of their holdings; others

Get the Facts—Costs You Nothing

The Canadian Government maintains Information Bureaus where you can get the facts—dependable Government information—without cost. The officials are not land agents—they have nothing personally to sell—they are clerical officials of the Government of Canada, maintained to be of service to you, without any charge. Let us know something of your position, and receive free book with maps, and the free service of the Canadian Government Agent in your territory; also information how special railway rates can be arranged for a trip of inspection.

New Jersey Poultrymen Hold Meeting

AT the quarterly meeting of the Atlantic Coast Poultry Producers', a cooperative organization with several hundred commercial poultrymen in New Jersey and adjacent territory, held at Trenton, N. J., last week, a total enrolment of nearly 60,000 laying hens was reported. The association is handling the product of its members on the New York City and other nearby markets, conducting the sales on the basis of weekly pools, according to the general locality from which the eggs are shipped. It has been successful in increasing the prestige of New Jersey eggs on eastern markets, thus operating to the benefit of the industry as a whole as well as to its own membership. Manager Herman B. Walker said that his plans were well under way to take care of storage eggs for members. During the last two months nearly 50 new members have been elected to the association, 18 at the meeting last week.

In an effort to secure more funds for scientific research on poultry diseases, the directors of the association waited upon Governor Silzer of New Jersey and secured his promise of serious consideration of an appropriation asking for \$10,000 to be given to the State College for this purpose. The association also asked for representatives of the poultry industry upon the New Jersey College Board of Visitors, suggesting appointment by the Governor of John Cray of Stockton, N. J., and Harry H. Ober of Lakewood, N. J., these to be the appointments from their respective counties.

Holstein Men Talk Cow Testing

Speaking before the fifth annual meeting of the Salem-Cumberland-Gloucester Counties Holstein-Friesian Association recently, Dr. J. H. McNeil, New Jersey State Veterinarian, said that 456 dairy herds had been tested in the State in the last six months. These herds comprised nearly 17,000 cows. The testing work in the State shows that purebreds are on the increase, and that as a rule there were two purebreds tested to every grade animal. Dr. McNeil also called attention to the desirability of officially testing all purebreds offered for sale, since the records enhance the value and also show the owner which animals he may best dispose of.

Officers of the association for the coming year are: President, Samuel Ridgeway of Salem, N. J.; Vice-president, Eber M. R. Davis of Marlboro, N. J.; Treasurer, John Ridgeway of Hancock's Bridge, J. J. Samuel Ridgeway is a prominent breeder of South Jersey and active in Holstein affairs. Mr. Davis is the owner of Eberdale Farms, and a large winner at some of the State and local fairs.

Notes from the Counties

The season of public sales has opened with reports of large crowds and fair prices coming in from many counties. More interest is indicated in horses and mules than in some years. At one sale in Salem County, N. J., the animals sold from \$42.50 to \$275, the prices being reported low as a general rule for many of the horses. At some of the sales good timothy went at \$23 a ton and potatoes at 40 cents per basket. Most of the sales so far have been largely on a cash basis, and bidders have been buying only for immediate wants. The old custom of buying everything offered and paying with a small cash deposit and promissory notes has not been such a popular method this season.

The Somerset County Agricultural Contest Committee is already laying plans for its third annual boys' and girls' contest to be held next October. Last year 535 boys and girls in the county entered the exhibition, and with the broader plans now under consideration by the committee, it is hoped to make the annual affair an even larger one this year. The officers of the committee are: Chairman, Dr. W. H. Whiton; Vice-chairman, H. C. Krebs; Treasurer, A. C. Morrison; Secretary, E. T. Suydam. The work is conducted under a federated committee representing the Somerset County Board of Agriculture, the County Granges, the County Holstein Association, the County Y. M. C. A., public schools and the Parent-Teachers' Association.

Strout's FARMS

JUST OUT! City Folks Tell Us

Now Let's Tell Them How To Do It

DURING a recent two weeks' visit to the Metropolis, I had a good chance to compare city life with life on the farm and also study some of the marketing problems as they affect farmers in general and poultrymen in particular.

One of my first experiences was to get caught in the famous New York rush-hour jam as I tried to board a subway car. I got caught with my back to the wall as the trainman was trying to urge the crowd in the doorway "forward please," so as to be able to crowd in one more "fare," meaning a nickel more in the treasury, until I had to push with all my might with both hands against the "fare" in front of me, who happened to be a woman, in order to prevent my ribs from being crushed.

As I looked over that crowd, the thought occurred to me, "What a lot of Cheap Johns! Here they are going through this twice each day for the privilege of retaining a five-cent-fare rate. They insist on the privilege of riding all the way from Coney Island to the Bronx for a single nickel, includ-

By O. W. MAPES

tions on the Pacific Coast shipping eggs to New York, and usually all were represented with more or less of a shipment.

They are graded into extras, firsts, mediums, pullets, before they are shipped. The first day I was there, 800 cases were sold in 14 minutes. Another day 1,200 cases were disposed of in 20 minutes.

The Mercantile Exchange will have to look to its laurels, or the price-fixing power will pass from the Exchange to this auction room, at least for white eggs. I have long contended that a public auction for eggs and butter would give us an index of market values much better than "The Call" that has been held for so many years on the floor of the Mercantile Exchange behind closed doors.

A New Style Egg Flat

A new style egg flat seems to be attracting much attention in the market. It is to be used in the ordinary standard cases along with the standard honeycomb fillers in use so many years. Excelsior pads will be eliminated alto-

A New Style Egg Flat That Avoids Much Breakage

ing a passage under the East River, through a tunnel built at enormous cost. If they would be satisfied to call it a ride after they are carried under the river, and pay another nickel for the privilege of continuing on to the Bronx or to the beach, probably 20 miles in all, at least, the company would have funds with which to provide better accommodations, even on the present lines."

Suppose the station platform were made twice as long and the trains made twice as long. What would happen? The tracks must be strong enough to carry an express train of 20 cars just as safely as ten cars. The rails of our cross-country railroad lines carry 50 or more cars with their heavy steam locomotives. The time lost between trains for safety sake, need be little, if any more, for a long train than for a short train.

Give the lines sufficient revenue and they could soon double the carrying capacity of the present subways and surface lines by running more cars and longer trains.

In the Egg Market

One of the points which interested me greatly was the market district around Rade Street, where the white eggs from the Pacific Coast are disposed of. The experiment of disposing of most of the supply of these eggs at a public auction three times a week seems to be meeting with much favor. Samples of each lot are put on display for an hour before the auction begins, where prospective buyers can examine them.

Many of the eggs are sold on trucks, standing in the street at the front, ready for immediate delivery anywhere in a given area, and many "on the dock." The bidding seemed to be spirited and the competition quite strong. Each lot was offered "ten crates with the privilege of the lot," until the whole lot was disposed of. There are five or six different producers' organiza-

tion, and also the ordinary smooth flats now in use. It is made with a cup-shaped, hammock-like projection under each of the 36 eggs in each filler. This removes the contact with the flat from the point of the eggs, where breakage usually occurs, to the entire oval of the end of the eggs. It also locks each egg to the flat, so that it cannot shift on the flat from a lateral shock, and each egg receives only the shock caused by its own weight.

It is being made by the Mapes Paper Products Corporation, with a factory out in Indiana. The name, by the way, belongs to another man by the name of Mapes, who is connected with the corporation and owns the patent on it. A trial lot of a million flats has already been made, and is being tested out both in domestic and foreign shipment with most gratifying results, particularly in export shipments. Some fifteen different lots have been exported in them with practically no reports of loss by breakage. The eggs are packed in the thin standard cases in general use here.

I heard of one exporter who packed a thousand cases, one-half in the usual heavy export cases and the other half with the new flats, and in thin cases, and he reports that the latter arrived in perfect condition, while there was serious breakage in the lot packed in heavy export cases at a cost for repacking of about four cents per dozen. The difference in profit, including both the cost of repacking in the heavy cases and the breakage, amounted to over \$1,100 in favor of the 500 cases packed in the new flats. He has since exported 2,000 cases all packed in the new flats, and had another order for 2,500 cases to be shipped at once.

If European markets for storage eggs can thus be brought about 7 cents per dozen nearer to our doors, and the amount added to our tariff wall, egg production in the United States will receive a big benefit.

Why Peerless Fence Satisfies

PEERLESS WIRE & FENCE CO., Cleveland, O.

Having a general acquaintance with the desirability of Peerless Fence and the well managed company, I can highly recommend it as the best all-purpose fence in this country. I know of fence still in use which has been up for 20 years.

Yours truly,
Henry W. Stevens,
Tecumseh, Mich.

The One Best Way to Raise Chicks

Wishbone Blue Flame BROODER

Raise better chickens! Save most of the time and all of the worry that usually goes with raising chicks! Chicks develop more quickly into strong, healthy, long-lived chickens under a Wishbone Brooder. Air and heat are ideally combined to invigorate them; to make them thrive. And the Wishbone way is the easiest way. Absolutely nothing to go wrong—nothing to worry about. A hot blue flame in a jiffy without priming or pre-heating. No valves to stick. "Kitchen-like heat" in the coldest weather. You can forget the Wishbone for weeks except for occasionally filling the generous oil

tank. The Wishbone can't give trouble, and it insists on developing the finest chicks. Thousands successfully in use.

Write for free descriptive booklet and testimonials NOW or order from this ad. Prices:—Four sizes—50-100 chicks \$10, 250 chicks \$16, 500 chicks \$19, 1,000 chicks \$22. A little higher in far west. Don't put up with an unsatisfactory brooder—send your order today. Full money-back guarantee protects you.

The Accredited Herd Plan

Our First Experience With Reactors

I SIGNED up my first herd of mixed grades and purebreds to be tested under the accredited herd plan because I had decided to keep a purebred herd in the future. I figured then, and I still believe, that a purebred herd infected with tuberculosis is a very doubtful asset.

I adopted the accredited herd plan for two reasons: first, I could get larger indemnities should my cattle react; and, second, I would receive a Federal certificate allowing me to ship anywhere in the United States when finally I had a clean herd. I felt this certificate would be very valuable in advertising.

Soon after I signed up, a federally employed veterinarian came without cost to me to make the test. Several cows, mostly grades, reacted. He branded these with a T on the jaw, and we were ordered to segregate them—which was physically impossible for us to do. In time an appraiser came and set his values, and the cattle were slaughtered. The salvage—beef was high then—and the indemnities paid us well for the animals we had lost. We gave the barn and yard a little brushing up, sprayed a little disinfectant around, and congratulated ourselves on a job well done. We were free from tuberculosis.

More Reactors on Second Test

From time to time during the next six months we bought in purebreds. In all cases we required them to be tested. Then came our second test. Like the first tuberculin test of my experience, I shall never forget it. It seemed that every purebred cow that was worth more than \$250 reacted. The interdermal method was used in testing, and I can see to-day those tell-tale swellings!

What had happened was this: The first test had undoubtedly left a bad spreader in the herd. Our clean-up had not been thorough enough. We had not exercised enough care in the purchase of our replacements. The result was disastrous to us. We had lost the state and federal money that had been spent to help us. And all because fundamentals had been lost sight of. This case of ours is typical; hundreds have had the same experience.

The Man Who Controls Tuberculosis

There is only one man who can eliminate tuberculosis from a herd of cattle. He is the man who controls the herd. In this fact lies, or should lie, the fundamental of any plan to combat the disease.

At best all that the accredited herd plan—or any other plan—can do is to supplement and make easy the work of the cattle owner. As originally laid out, the accredited herd plan was designed to help the man who desired and possessed the ability to fight the disease in his own herd and to give him official recognition when he had accomplished the job.

A Good Plan Gone Wrong

The whole plan was to be an agreement between the owner and the state and federal authorities covering a method of procedure. As worked out in practice, the plan has become the vehicle of well-meaning but mistaken officials who have put the cart before the horse. They have made the mistake—natural, from their viewpoint—of believing that bovine tuberculosis is eliminated by the activities of state and federal officials, by legislative appropriations, and by area operations,

instead of by the most careful and painstaking work upon the part of intelligent cattle owners.

It is time the cattle owner had something to say. New York State is fortunate in having a man who knows cattle at the head of its Bureau of Animal Industry. It is not so fortunate in its federal tie-up. Official Washington tries to dominate. Official Washington is usually miles in the air; it makes its rules and regulations; it compiles its data, and it issues official reports that show astounding totals. In its conduct of the accredited herd plan, the United

States Bureau of Animal Industry has proved no exception to the general rule.

The accredited herd plan, as anyone knows who has been through the game, depends on the cooperation of the cattle owner. This cooperation depends on his desire and ability. Desire may be stimulated by liberal indemnities, but ability is not a universal possession. It does not exist in areas; it is not developed by charity.

Some men can rid their herds of tuberculosis. Others never can. The men who can, should demand that indemnity money be reserved to help them. A lot of money is going to pay indemnities to owners who have neither the intention, nor the understanding of the disease, to control tuberculosis. Here lies the danger of the present system of testing under the accredited herd plan. Meanwhile totals are piling up, the public is becoming restive, and a lot of good men are without the government help to which they are entitled.

The situation is dangerous. The one group which can safeguard it is the owners of accredited herds. These are the men who know what is involved. They are the ones who want to insure the continuation of accredited herd work. With them it is not a matter of indemnities or areas, but of the protection of a system. They at least should be consulted more than they are.

JANUARY POOL PRICE 2.28½

The Dairymen's League Cooperative Association announces \$2.28½ a hundred as its gross pool price for the month of January. From this 7½ cents per hundred are deducted by the Association for expenses of administration and advertising, and 10 cents a hundred are borrowed by the Association on its Certificate of Indebtedness plan. This leaves a net cash price to farmers for January milk of \$2.11. This is the base price for milk containing 3 per cent butterfat in the 201-210-mile freight zone from New York City.

The gross price paid by the League for December milk was \$2.82 a hundred. From that price 7 cents a hundred were deducted for expenses and 20 cents borrowed on Certificates of Indebtedness.

"As A Man Thinketh," So Is He"

(Continued from page 161)

Then, too, taxes are too high; people are overworked trying to make ends meet, and can not do so. In the old days we were satisfied with less of the things that we now seem to require. The more we have, the more we want, but we have to pay well for all that we get now-a-days. As a result of this striving for more and more of the world's goods, there is no time for

TRIPLE WALL
CRANE
SILOS

"Giants of Strength"

Wherever you may see the smooth and handsome outline of a Craine Silo, there you note unquestioned evidence of uprightness and strength.

There are good reasons for this. Craine Silos look different and are different: They are built to withstand tons of pressure from within, and the stress of violent storms from without. They make the best silage and keep it good; by keeping warmth and valuable juices in, and by keeping cold and weather out.

Three walls insure this. A strong stave silo inside is surrounded and supported at every square inch by an outer wall of patented Crainelox Spiral Covering. A thick wall of Silafelt between insures protection.

The best of dairy farms choose the Craine, either after experience with others or after thorough investigation.

CRANE TRIPLE WALL SILOS

YOU CAN'T AFFORD TO HAVE SICK OR BACKWARD COWS

Kow-Kare Insures Profitable Dairying for Thousands All Over the Country

Cut out the constant leaks of dairying that result from sick cows and disappointing milk-yield, and you will begin to reap the real profits. Stop looking upon cow diseases as inevitable; they CAN be prevented.

The cow's winter diet is hard on her digestive and genital organs—runs them down. Overfeeding of rich concentrates only aggravates the condition. What is needed is to keep the milk-making and digestive organs healthy enough to maintain top-notch production and at the same time throw off disease.

Kow-Kare has the medicinal properties to accomplish just that. It acts directly on the vital organs of the milch cow, toning up and giving strength. It is this marvelous rebuilding action that has made Kow-Kare famous in the treatment of cow diseases, such as Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Milk Fever.

We get thousands of letters each year, like this one from Jacob Germann, Farmingdale, Ill.

"I had three cows this Spring, one had garget, and one had milk fever, and one

was done up completely from calving and could not get up or walk and I had a veterinarian with no good results. I began feeding Kow-Kare and she is able to go to pasture with the other cows now. I just know I would have lost the three if I had not had your medicine."

Remarkable increases in winter milk yield can be attained by feeding just a tablespoonful of Kow-Kare twice a day for one week in each month. Try it, and you will never go through a winter without Kow-Kare.

Our 32-page book on cow diseases, free. Kow-Kare is sold by feed dealers, general stores, and druggists. If your dealer is not supplied, we mail the remedy post-paid.

church work and little desire for it. In the old days, they all seemed to have a common interest in the community life. Now it seems to be each one for himself, not caring what becomes of the other fellow. If there were preachers enough to supply all of the churches, they would starve on the salary paid them, because it costs more to live now-a-days.

The only chance for the rural church is an infusion of new blood, having a desire to improve their homes, and a willingness to live there and enjoy life, as in the days gone by. In many places there are different nationalities, languages and mode of living. These different races in the same village or rural community have little in common with each other. Then how are you going to make them work together for the upbuilding of a church in a place like that? Where it is possible, I think they should all support the nearest village church and try to build up a strong central organization. One strong church led by a live minister of the gospel is worth more than four dead ones where they let the man of God leave without his pay. There is too much jealousy and quarreling in the church of to-day to make it a power for good in the place.

I have been a farmer. I know the country church of the days gone by. I know the conditions of the country life to-day, and I am in favor of the old days and the old ways when we all attended church and Sunday School in the little church or school house, where we all went to school.

But what has become of the old days, the old ways, the old boys and the old girls, that mother and daddy knew? We have many of the modern improvements in our homes to-day and fine church properties in town and city, but what good are these fine churches if they are used only by the few and only for a short time on Sunday?—A. C. VAN LOON, Steuben Co., N. Y.

City Folks Tell Us

(Continued from page 169)

Another thing I noticed which should be brought to the attention of our producers. A demand has recently sprung up for eggs with light colored yolks. The people who want these are the very ones who want the best Jersey and New York State eggs. A difference of from 5 to 6 cents per dozen is willingly paid in order to secure those with light-colored yolks. This being so, it behooves us to try and meet the demand. It can best be done, I believe, by feeding white corn instead of yellow corn. It has been impossible as yet for me to buy white corn here. White hominy meal in the dry mash should also help toward the same end, and I shall try it as soon as possible if I can find a supply.

Many years ago wheat was at a price as low as corn, and I purchased a car-load of wheat for my hens, feeding it exclusively in place of corn. It happened that at the time I was on a diet, by doctor's orders, including a poached egg on toast for my breakfast. I remember very distinctly that the yolks were very light in color while the wheat lasted, but when I changed back to yellow corn, the bull's-eye in my poached egg quickly changed to a rich yellow, reminding me of the bloom of health appearing on the cheek of a maiden who has been sick.

I have written to our G. L. F. about the matter, and they write me that as soon as there is any general demand for cracked corn and corn meal made from white corn, they will be glad to put it in stock. Readers who wish to get top quotations for their eggs will do well to write to the G. L. F. and ask to have the white corn listed in its quotations.

We note a great improvement in the old reliable American Agriculturist lately. It certainly can't be beat as a live wire farm paper that is out and out in the interest of the farmer and his whole family.—HORACE T. JOHNSON, Franklin Co., N. Y.

We like your paper very much, and would hardly know how to do without it. It helps to straighten the farmer's backbone and he needs it.—MRS. WM. SHUGERLAND, Albany County, N. Y.

A MORE MILK MESSAGE

More milk from your cows—better physical and health condition of the herd are the rewards that come to the dairyman or farmer who feeds Sugared Schumacher Feed.

Sugared Schumacher is essentially a Maintenance ration. It supplies the cow with an abundance of bodily nutrition—nourishment—and thus fits her to produce MORE MILK. It is giving unusual satisfaction to thousands of critical feeders. Feed

SUGARED SCHUMACHER FEED

as the base or maintenance part of your ration along with cottonseed meal, gluten, Big "Q" or other concentrates and you will see a marked improvement in milk yield and general health condition of your herd. Composed of Corn, Oats, Barley, Wheat, finely ground and sweetened with Cane Molasses, Sugared Schumacher is highly nutritious and extremely palatable. It's sweet—cows like it—do better on it. Your dealer can supply you.

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

Adjustments and Collections

Service Bureau Reports Many Cases Amicably Settled

"A DAY or so ago, I received a check from the fur house to which I had shipped my furs, and with it came a very nice letter explaining things. There had been a misunderstanding on both sides, and as a result, I sent them another lot. They promised more promptness in handling it, and I am sure that since this has been straightened out our transactions will be perfectly satisfactory."

It is thus that one of our subscribers wrote us about a case which we had handled for him. A reliable fur house of New York which advertises in the American Agriculturist had received furs from him, and he did not feel that they had paid a fair price for what he shipped. The American Agriculturist immediately took the matter up with the advertiser, and as a result Mr. O. immediately heard from them. His letter tells the story.

WE COLLECT \$114.90

"We received the check for \$114.90. We are very much obliged to you for your services." The check was in payment for a large shipment of turkeys made before Thanksgiving Day to a Boston firm. It was the end of January before the subscriber received the remittance, and then it was only due to the efforts of the Service Bureau that the check was sent.

Mrs. J. C. C. of Richville, N. Y., wrote us, however, that the firm mailed the check within a few days after receiving our communication urging them to do so. It was a case which we did not find difficult to settle, but which, if the subscriber had handled herself, might have dragged along for some time before reaching a satisfactory outcome.

BANTAMS PAID FOR

"Thank you very much for collecting the \$9.00 for me. You have been of great assistance in the matter." Stanley Saunders of Alfred, N. Y., turned over to us, early in December, a case which concerned the sale of prize-winning bantams. He had never been paid for the bantams, and the American Agriculturist immediately undertook to collect for him. It took a little while to get in touch with the recipient, but finally the check was forthcoming and the matter amicably adjusted.

SLOW, BUT IT CAME AT LAST

Mr. C. E. M. had to wait six weeks to get his check, and even then he did not think it was for a fair amount, but he had had so much difficulty in collecting from the company that he was glad to accept the amount of \$51.32 for the poultry which he had sold to a Boston firm.

In this case, also, it was due to the efforts of the American Agriculturist that the firm made remittance, and although Mr. M. felt that the price was too low, he realized that he might have easily been out the entire amount.

MOLASSES IS SLOW

A lost case of molasses which started in Vermont and never arrived at the New York farm for which it had been ordered, recently caused a good deal of trouble.

However, the Philadelphia branch of the firm made the order good and blamed the present embargo on the railroads for the slowness in delivery. In any case, the customer received his molasses and that was what he desired.

A CARBIDE COMPANY VANISHES

Ever since last summer, the Service Bureau has been flooded with inquiries about different carbide companies. One of the names which we received was that of the Imperial Carbide Company, which had been taking orders, but never seemed to ship them. The offices of the firm was usually given as Kansas City, Mo., although the American Agriculturist discovered that the Im-

perial Carbide Company of Keokuk, Ia., was supposed to have some connection with the firm.

We have recently been advised by the Post Office that this firm went out of business some time ago. At first, according to the Postmaster of Kansas City, they left a forwarding address, but then they dropped out of sight altogether. This seems to be another of the many dubious concerns which solicited orders without a reputable organization to back up the delivery. We are sorry that so many of our readers were taken in, and will have to write it off as another swindle.

"THANKS" OUR BEST PAYMENT

In thanking the American Agriculturist for obtaining a check for \$15.75 from a New York firm which had not made good on an order, Mr. W. M. Barmore of Gerry, N. Y., offered to pay any necessary collection charges. As usual, we wrote him that the Service Bureau lived up to its name. In other words, it is here to render service and not to make money. We were glad that we had succeeded in getting the money, but all the payment we wanted was the satisfaction of our subscriber.

"ALMOST A MIRACLE"

"They surely do come across when the Old Reliable American Agriculturist goes after them. I am glad to inform you that I received the check for the full amount. This seems almost a miracle, when I have been writing to them ever since the middle of November and could get nothing but promises of what they would do."

It was thus that Mrs. E. E. McF. of Pennsylvania wrote to the Service Bureau recently. It had taken some time to make a prominent Mail-order House see the light in regard to a case which they had neglected, but the results were so satisfactory that it was worth the effort of bringing the case to a conclusion.

A SMALL SUM, BUT WE GOT IT

The sum of \$1.69 may not seem a large one, but when you take into consideration the difficulty of making out an order, sending it, waiting for it to be delivered, writing letters of inquiry and the other details involved, it makes it all the more annoying that the order was such a small one and was so badly handled.

A check for \$1.69 was recently received from the Leonard-Morton Company in settlement of a case put into our hands by Mrs. George Franklin of New York State. Instead of receiving a pair of child's shoes she had ordered, a pair of woman's slippers was sent her, and, upon returning them, she failed to get any satisfaction from the company until the American Agriculturist took the matter in hand.

Place Orders Early—By this time all incubator and brooding equipment should be ordered. If you are not going to hatch your chicks, your order for chicks should be placed immediately to insure delivery when you wish them.

\$5.00 Solid Copper Vacuum Washer, \$2.50

WILL LAST A LIFETIME!—GET ONE TODAY

If you want the very best that can be made, here it is. We have sold over 300,000 tin washers, and they have given perfect satisfaction, but, of course, the solid copper is much better. We are just selling a few at \$2.50 to introduce them. After which the price will go back to \$5.00. Don't miss this wonderful chance. Tell your friends about it. SEND TODAY.

DUPLEX MANUFACTURING CO.,

We Absolutely Guarantee the Duplex Will

Wash a tubful of anything washable in three minutes. Blankets, lace, socks, cuffs, silks, underwear, curtains, towels, handkerchiefs, ANYTHING. Hands do not come in contact with the water, therefore it can be scalding hot. So easy to operate that a child can do it. Will not wear out your clothes. The Duplex forces the boiling suds through the clothes, NOT the clothes through the suds. Will save your back and many hours of needless toil. An ordinary weekly wash can be washed, blued and on the line in one hour. Your money back without question if it will not do all we claim and more. Don't miss this special offer. Send only \$2.50 and this ad. TODAY and we will send you the solid copper Duplex Vacuum Washer, regular price \$5.00, by parcel post to any address.

Dept. C-112,

DETROIT, MICH.

Give Your Cows a Chance!

Cows produce a heavier flow of milk when kept in comfortable, sanitary quarters. They waste less feed, require less work and are not so susceptible to disease.

Whether your herd is large or small, give your cows a chance to produce to full capacity and pay larger profits with less waste and less the work—safeguard yourself against heavy loss from disease—with sanitary pasture comfort

LOUDEN

Steel Stalls and Stanchions

Most sanitary—no germ-holding crevices with famous Louden dust-proof couplings. Simple correct design of Louden Stalls makes clumsy, dirt-catching attachments unnecessary. So strong they will last as long as the barn stands.

Louden Swinging Stanchion gives cow pasture comfort in the barn, allows her to freely turn her head and card herself, to lie down naturally and rest with head against side of body and to get up with greatest ease. The most perfect cow-tie made and only one that can successfully be used with high built-up manger curb, which prevents cows from wasting feed by working it back on to the stall floor—a great saving in itself each year.

GET THESE TWO FREE BOOKS

Louden Catalog—Its 224 pages picture and describe more than 100 labor-savers for the barn. Louden Barn Plan Book—a 112-page encyclopedia of extremely helpful barn-building information. Shows how to get a better all-around barn at less cost. Both books sent free to farmers upon request, no cost or obligation. Write for them today.

The Valley of the Giants—By Peter B. Kyne

UPON his return from the office that night, Bryce Cardigan found his father had left his bed and was seated before the library fire.

"Feeling a whole lot better to-day, eh, pal?" his son queried.

John Cardigan smiled. "Yes, son," he replied plaintively. "I guess I'll manage to live till next spring."

"Oh, I knew there was nothing wrong with you, John Cardigan, that a healthy check wouldn't cure. Pennington rather jolted you, though, didn't he?"

"He did, Bryce. I never doubted but that Pennington would snap up the property the instant I offered to sell. Hence his refusal, in the face of our desperate need for money, almost floored your old man."

"Well, this gives us a fighting chance, partner. And after dinner you and I will start brewing powerful bad medicine for the Colonel."

"Son, I've been sitting here simmering all day." There was a note of the old fighting John Cardigan in his voice. "Even if I must sit on the bench and root, I've not reached the point where my years have begun to affect my thinking ability." He touched his leonine head. "I'm as right as a fox up-stairs, Bryce."

"Right-o, Johnny. We'll buck the line together."

Accordingly, dinner disposed of, father and son sat down together to prepare the plan of campaign. The old man spoke first.

"We'll have to fight him in the dark."

"Why?"

"Because if Pennington knows, or even suspects who is going to parallel his railroad, he will throw all the weight of his capable mind, his wealth and his ruthlessness against you—and you will be smashed. You must do more than spend money. You will have to outthink him, outwork him, outgame him. You have one advantage starting out. The Colonel doesn't think you have the courage to parallel his road. He knows you haven't the money; and he is morally certain you cannot borrow it, because you haven't any collateral to secure your note."

"We are mortgaged now to the limit, and our floating indebtedness is very large; on the face of things, we're helpless; and unless the lumber-market stiffens very materially this year, by the time our hauling-contract with Pennington's road expires, we'll be back where we were before we sold the Giants. So, all things considered, the Colonel, will be slow to suspect us of having an acre, but, by jinks, we have it, and we're going to play it."

"No," said Bryce, "we're going to let somebody else play it for us. The point you make—that we must remain absolutely in the background—is well taken."

"Very well," agreed the old man. "Now let us proceed to the next point. You must engage some reliable engineer to look over the proposed route of the road and give us an estimate of the cost of construction."

"For the sake of argument we will consider that done, and that the estimate comes within the sum Gregory is willing to advance us."

"Your third step, then, will be to incorporate a railroad company under the laws of the State of California."

"I THINK I'll favor the fair State of New Jersey with our trade," Bryce suggested dryly. "When Pennington bought out Henderson, he incorporated the Laguna Grande Lumber Company under the laws of the State of New Jersey, home of the trusts. There must be some advantage connected with such a course."

"Have it your own way, boy. What's good enough for the Colonel is good enough for us. Now, then, you are going to incorporate a company to build a road twelve miles long—and a private road, at that. That would be fatal. Pennington would know somebody was going to build a logging-road, and regardless of who the builders were, he would have to fight them in self-protection. How are you going to cover your trail, my son?"

Bryce pondered. "My road cannot be private; it must be a common carrier, and that's where the shoe pinches. Common carriers are subject to the rules and regulations of the Railroad Commission."

"They are wise and just rulers," commented the old man, "expensive to obey at times, but quite necessary. Objection overruled."

"Well, then, since we must be a common carrier, we might as well incorporate for the purpose of building a road from Sequoia to Grant's Pass, Oregon, there to connect with the Southern Pacific."

John Cardigan smiled. "The old dream revived, eh? Well, the old jokes always bring a hearty laugh. People will laugh at your company, because folks up this way realize that the con-

struction cost is prohibitive, not to mention the cost of maintenance, which would be out of all proportion to the freight area tapped."

"Well, since we're not going to build more than twelve miles of our road during the next year, and probably not more than ten miles additional during the present century, we won't worry over it. It doesn't cost a cent more to procure a franchise to build a road from here to the moon. If we fail to build to Grant's Pass, our franchise to build the uncompleted portion lapses and we hold that portion which we have constructed. That's all we want to hold."

"How about rights of way?"

"They will cost little, if anything. Most of the landowners along the proposed route will give us rights of way free gratis for nothing, just to encourage the lunatics. Without a railroad the land is valueless; and as a common carrier they know we can condemn rights of way. Moreover, deeds can be drawn with a time-limit, after which they revert to the original owners."

"GOOD strategy, son! And certainly as a common carrier we will be welcomed by the farmers and cattlemen along our short line. We can handle their freight without much annoyance and perhaps at a slight profit."

"Well, that about completes the rough outline of our plan. The next thing to do is to start and keep right on moving. We have a year in which to build our road; if we do not hurry, the mill will have to shut down for lack of logs, when our contract with Pennington expires."

"You forget the manager for our new corporation—the vice-president and general manager. The man we engage must be the fastest and most convincing talker in California. And he must talk in millions, look millions, and act as if a million dollars were equivalent in value to a redwood stump. In addition, he must be a man of real ability and a person you can trust implicitly."

"I have the man. His name is Buck Ogilvy and only this very day I received a letter from him begging me for a small loan. I have Buck on ice in a fifth-class San Francisco hotel."

"Tell me about him, Bryce."

"Don't have to. You've just told me about him. However, I'll read you his letter. I claim there is more character in a letter than in a face."

Here Bryce read aloud:

"Golden Gate Hotel—Rooms fifty cents—and up.

"San Francisco, California,
"August fifteenth."

"MY DEAR CARDIGAN: Hark to the voice of one crying in the wilderness; then picture to yourself the unlvely spectacle of a strong man crying.

"Let us assume that you have duly considered. Now wind up your wrist and send me a rectangular piece of white, blue, green, or pink paper bearing in the lower right-hand corner the magic words 'Bryce Cardigan'—with the little-up-and-down hook and flourish which lends value to otherwise worthless paper. Five dollars would make me chirp up; ten would start a slight smile; twenty would put a beam in mine eye; fifty would cause me to utter cries of joy, and a hundred would

inspire me to actions like unto those of a whirling dervish.

"I am so flat busted my arches make hollow sounds as I tread the hard pavements of a great city, seeking a job. On the brink of despair, I think of old times and happier days and particularly of that pink-and-white midget of a girl who tended the soda-fountain at Princeton. You stole that damsel from me, and I never thanked you. Then I remembered you were a timber-king with a kind heart; so I looked in the telephone book and found the address of the San Francisco office of the Cardigan Redwood Company. You have a mean man in charge there. I called on him, told him I was an old college pal of yours, and tried to borrow a dollar. While he was abusing me, I stole from his desk the stamped envelope which bears to you these tidings of great woe; and while awaiting your reply, be advised that I subsist on the bitter cud of reflection, fresh air, and water.

"When you knew me last, I was a prosperous young contractor. Alas! I put all my eggs in one basket and produced an omelet. Took a contract to build a railroad in Honduras. Honduras got to fighting with Nicaragua; the Nicaraguan army recruited all my laborers and mounted them on my mules and horses, swiped all my grub, and told me to go home. I went. Why stay? Moreover, I had an incentive consisting of about an inch of bayonet—fortunately not applied in a vital spot.

"Hurry, my dear Cardigan. I finished eating my overcoat the day before yesterday.

"Make it a hundred, and when I get it, I'll come to Sequoia and kiss you. I'll pay you back sometime—of course.

"Wistfully thine—BUCK OGILVY.

"P. S.—Delays are dangerous, and procrastination is the thief of time.—B."

John Cardigan chuckled. "I'd take Buck Ogilvy, Bryce. He'll do. Is he honest?"

"He was, the last time I saw him."

"Then wire him a hundred. Don't wait for the mail."

"I have already wired him the hundred. In all probability he is now out whirling like a dervish."

"Good boy! Well, you'd better leave for San Francisco to-morrow and close your deal with Gregory. Hire a good lawyer to draw up the agreement between you; be sure you're right, and then go ahead—full speed. When you return to Sequoia, I'll have a few more points to give you. I'll mull them over in the meantime."

CHAPTER XX

WHEN Bryce Cardigan walked down the gangplank in San Francisco, the first face he saw was Buck Ogilvy's. Mr. Ogilvy wore his overcoat and a joyous smile, proving that all was well; he pressed forward and thrust forth a great speckled paw for Bryce to shake. Bryce ignored it.

"Why, don't you remember me?" Ogilvy demanded, "I'm Buck Ogilvy."

Bryce looked him in the eye and favored him with a lightning wink. "I have never heard of you Mr. Ogilvy. You are mistaking me for someone else."

"Sorry," Ogilvy murmured. "My mistake: Thought you were Bill Kerrick, who used to be a partner of mine. I'm expecting him on this boat, and he's the speaking image of you."

Bryce nodded and passed on, hailed a taxicab, and was driven to the San Francisco office of his company. Five

minutes later the door opened and Buck Ogilvy entered.

"I was a bit puzzled at the dock, Bryce," he explained as they shook hands, "but decided to play safe and then follow you to your office. What's up? Have you killed somebody, and are the detectives on your trail?"

"No, I wasn't being shadowed, Buck, but my principal enemy was coming down the gangplank right behind me, and—"

"So was my principal enemy," Ogilvy interrupted. "What does our enemy look like?"

"Like ready money. And if he had seen me shaking hands with you, he'd have suspected a connection between us later on. Buck, you have a good job—about five hundred a month."

"THANKS, old man. I'd work for you for nothing. What are we going to do?"

"Build twelve miles of logging railroad and parallel the line of the old wolf I spoke of a moment ago."

"Good news! We'll do it. How soon do you want it done?"

"As soon as possible. You're the vice president and general manager."

"I accept the nomination. What do I do first?"

"Listen carefully to my story, analyze my plan for possible weak spots, and then get busy, because after I have provided the funds and given the word 'Go!' the rest is up to you. I must not be known in the transaction at all, because that would be fatal."

"I listen," said Buck Ogilvy, and he inclined a large speckled ear in Bryce's direction, the while his large speckled hand drew a scratch-pad toward him.

Three hours later Ogilvy was in possession of the most minute details of the situation in Sequoia, had tabulated, indexed, and cross-indexed them in his ingenious brain and was ready for business—and so announced himself.

"And inasmuch as that hundred you sent me has been pretty well scattered," he concluded, "suppose you call in your cold-hearted manager, and give him orders to honor my sight-drafts. If I'm to light in Sequoia looking like ready money, I've got to have some high-class, tailor-made clothes, and a shine and a shave and a shampoo and a trunk and a private secretary. If there was a railroad running into Sequoia, I'd insist on a private car."

This having been attended to, Mr. Ogilvy promptly proceeded to forget business and launched forth into a recital of his manifold adventures since leaving Princeton; finally the amiable and entertaining Buck took his departure with the announcement that he would try to buy some good second-hand grading equipment and a locomotive, in addition to casting an eye over the labor situation and sending a few wires East for the purpose of sounding the market on steel rails. Always an enthusiast, in his mind's eye Mr. Ogilvy could already see a long trainload of logs coming down the Northern California & Oregon Railroad, as he and Bryce had decided to christen the venture.

"N. C. & O.," Mr. Ogilvy murmured. "Sounds brisk and snappy. I like it. Hope that old hunk Pennington likes it, too. He'll probably feel that N. C. & O. stands for Northern California Outrage."

When Bryce Cardigan returned to Sequoia, his agreement with Gregory had been signed, sealed, and delivered; the money to build the road had been

(Continued on page 175)

WHAT HAS HAPPENED IN "THE VALLEY OF THE GIANTS"

THE struggle between old John Cardigan, pioneer in the redwoods country, and Colonel Seth Pennington, rival operator, has centered around the Valley of the Giants, Cardigan's favorite grove which blocks the Colonel's holdings.

It seems as though the feud has descended to young Cardigan and the Colonel's niece, Shirley Sumner. But the latter, angered by her uncle's unscrupulous methods secretly buys the Valley, planning to force peace. She does not know that Bryce is about to parallel Pennington's logging road, as a last desperate measure to save the Cardigan fortunes.

What Corn Shall I Plant?

(Continued from page 163)

the case of Leaming. There was just 70 per cent variation between the lowest and highest variety in the proportion of dry matter in a ton of these varieties at the silage stage. In the following table the different kinds of corn have been arranged in order, the first containing the most, according to the actual amount of dry matter that they contained per acre on September 10:

- Home-grown Luce's Favorite.
- Cayuga County Cornell 11.
- Cornell 12.
- Hall's Gold Nugget Favorite.
- Long Island Luce's Favorite.
- Westbranch Sweepstakes.
- Onondaga White Dent.
- Leaming.
- Home-grown Cornell 11.
- Weber's Dent.
- Bloody Butcher.
- Alvord's White Cap Dent.
- King Phillip.
- Smut Nose.
- Early Huron.
- Cook's Cross.

When it came time to husk the corn and determine the yield in business of shelled corn per acre from each kind, the work of the Department of Plant

- Onondaga White Dent.
- Cook's Cross.
- Westbranch Sweepstakes.
- Bloody Butcher.
- Early Huron.
- Long Island Luce's Favorite.
- King Phillip.
- Smut Nose.
- Leaming.

The seed of the Bloody Butcher variety, which Mr. Cheney obtained from the local store, proved to be a long-season strain. This was unfortunate, for usually Bloody Butcher has stood up well in corn tests in western New York. This, however, does emphasize a very important point, that often the source of seed may be of more importance than the variety itself. This problem has been given little attention until within the last few years. It is now possible, however, to obtain seed from reliable sources in commercial quantities from the best seedsmen.

The remarkable similarity of different strains of the same variety in the cases of Cornell 11 and Luce's Favorite is also worthy of attention. In almost every case these two strains of home-grown seed were similar in yielding capacity, height of stalk, time to matu-

VARIETIES	Days to Maturity	Green weight per acre	Dry weight per acre	Percent loss in drying	Green weight of stalks per acre	Dry weight of stalks per acre	% wt. of stalks lost in drying	Green weight of ears	Dry weight of ears	Percent of wt. lost in drying	Shelled corn, bu. per acre	Length of stalk in inches
King Philip	100	17.5	6.3	64	13.2	3.0	77	4.3	3.3	28	94	62
Smut Nose	100	17.2	6.3	63	12.8	3.2	75	4.4	3.1	29	89	62
Cook's Cross	100	14.7	6.3	57	9.6	2.6	73	5.1	3.7	27	106	68
Alvord's White Cap Dent	100	17.5	6.9	61	12.7	3.0	76	4.8	3.9	19	111	65
Weber's Dent	110	16.8	7.0	58	11.7	2.9	75	5.1	4.1	20	117	68
Early Huron	110	17.3	6.3	64	12.2	2.8	77	5.1	3.5	31	100	62
Home Grown Cornell 11	110	17.4	7.0	54	12.3	3.0	76	5.1	4.0	22	114	74
Cornell 11	110	17.4	7.5	51	12.1	3.3	73	5.3	4.2	21	120	74
Onondaga Western Dent	120	19.7	7.1	64	14.5	3.4	77	5.2	3.7	29	106	76
Hall's Gold Nugget	120	20.1	7.4	63	14.9	3.5	77	5.2	3.9	25	111	80
Cornell 12	120	20.1	7.5	63	15.1	3.5	77	5.0	4.0	20	114	84
Home Grown Luce's Favorite	120	22.3	7.8	65	17.2	4.0	77	5.1	3.8	25	109	88
Long Island Luce's Favorite	130	22.4	7.2	63	17.8	3.8	79	4.6	3.4	26	97	94
Bloody Butcher	140	22.0	7.0	68	17.0	3.4	80	5.0	3.6	28	103	98
West Branch Sweepstakes	140	22.7	7.2	69	17.2	3.6	79	5.5	3.6	35	103	108
Leaming	150	23.7	7.1	70	18.9	4.0	79	4.8	3.1	35	89	100

Breeding of the college showed up well. In running over the list, one can see that there are four kinds which this department has been instrumental in developing, the two strains of Cornell 11, Cornell 12 and Weber's Dent.

The Origin of Cornell 11

Cornell 11 is a selection of Pride of the North, a medium season yellow dent for New York State conditions. It will mature in about 115 days under good growing conditions, and is a high-yielding variety for both grain and silage on good corn soil. The plant-breeding department considers it well adapted to central and western New York conditions.

The Home-grown Cornell 11 used in this test has been matured successfully in Chautauqua County under average growing conditions for the past five years. The farm on which this particular seed was raised is over 1,500 feet above sea level. This home-grown seed was somewhat earlier and somewhat smaller growing than the Cayuga County seed.

Weber's Dent is a selection from Funk's Ninety Day Dent, and matures only a few days earlier than Cornell 11.

Cornell 12 is the same selection as Weber's Early Dent except that it is about two weeks later in maturity.

In Order of Bushels Per Acre

These varieties above mentioned were well up in the list when it was rearranged in order of yield of shelled corn per acre. The highest yielding varieties are listed first:

- Cayuga County Cornell 11.
- Weber's Dent.
- Cornell 12.
- Home-grown Cornell 11.
- Alvord's White Cap Dent.
- Hall's Gold Nugget.
- Home-grown Luce's Favorite.

rity and proportion of dry weight to green weight, to the same variety that was distributed by the college.

Recommendable Varieties

The conclusion that Mr. Cheney draws from all this work is that those varieties which have been recommended by the College of Agriculture and the Farm Bureaus are safe guides to go by. He would include among the kinds that he would recommend for various conditions:

Alvord's White Cap Dent, Cornell 11, Weber's Dent, Cornell 12, Hall's Gold Nugget, Luce's Favorite.

These are not listed in order of their importance, but it is felt that each has a place on farms where the growing season is about 120 days and the elevation is about 1,500 feet above sea level.

I remain a reader of your paper and like it very much.—JOHN CRANDALL, Saratoga County, N. Y.

The Valley of the Giants

(Continued from page 174)

deposited in bank; and Buck Ogilvy was already spending it like a drunken sailor. From now on, Bryce could only watch, wait, and pray.

On the next steamer a surveying party with complete camping-equipment arrived in Sequoia, purchased a wagon and two horses, piled their dunnage into the wagon, and disappeared up-country. Hard on their heels came Mr. Buck Ogilvy, and occupied the bridal suite in the Hotel Sequoia. In the sitting room of the suite Mr. Ogilvy installed a new desk, a filing cabinet, and a brisk young male secretary.

(Continued next week)

18 Ever-Blooming ROSE BUSHES

YOURS AS A GIFT For Only 2 Yearly Subscriptions for *American Agriculturist* at \$1.00 each. Your own renewal may be sent as one of the two subscriptions required.

No reader can afford to miss this mammoth gift offer—the greatest collection of plants we have ever given.

What can add more to the charm and beauty of your home than bowers of exquisite fragrant roses? Roses breathe sentiment and happiness. No home is complete without your own remarkable collection of 5 pink, 4 white, 5 red and 4 yellow roses. One of them is a climber. These rose bushes are guaranteed to reach you in good condition in proper time for planting in your locality. You cannot beat this selection of 18 roses.

WILLIAM R. SMITH, (Shellum)—The soft blending of the salmon-pinks and the rose-pinks and the beautiful flesh tints in this Rose give it a singular resemblance to the entrancing flush on a maiden's cheek.

MAMAN COCHET, (Cochet)—This is the famous Pink Cochet. Light pink shaded with salmon-yellow, outer petals splashed with bright rose; extremely large and full.

PRESIDENT TAFT, (McCullough)—It is without question the most remarkable of all pink Roses. It has a shining, intense, deep pink color possessed by no other Rose.

BRIDESMAID, (Moore)—A grand pink Rose for all purposes; not only a good garden Rose, but forces well.

RADIANCE, (Cook)—A brilliant rosy-carmine, displaying beautiful rich and opaline-pink tints in the open flower.

FLORENCE PEMBERTON, (Alex. Dickson)—Creamy-white, suffused pink; large, full, perfect in form.

WHITE LA FRANCE or AUGUSTINE GUINOISSEAU—Beautiful light fawn color, almost white; rightly described as an almost white La France. Extra fine.

WHITE MAMAN COCHET, (Cook)—A sport from Maman Cochet with creamy-white flowers faintly tinged with blush.

SNOWFLAKE, or MARIE LAMBERT, (Lambert)—Medium size, pure-white; free; fine bedder.

RED RADIANCE, (Gude)—The Washington Red Radiance. The enormous globular flowers on heavy canes are a sight to be long remembered. The color is dazzling crimson-scarlet.

RED LETTER DAY, (Alex. Dickson)—An exceedingly beautiful Rose of infinite grace and charm. Its velvety, brilliant, glowing scarlet-crimson buds and fully opened cactus-like flowers never fade.

MRS. BENJAMIN R. CANT, (Benj. Cant.)—Color deep rose, inner petals soft silvery-rose suffused with buff at the base.

MADAME LOMBARD, (Lacharme)—Bright deep rose, variable in color; large, fine form, good habit; free bloomer.

ALEXANDER HILL GRAY, (Alex. Dickson)—Its color is a solid deep yellow throughout. Gold medal, N. R. S.

LADY HILLINGDON, (Lowe & Shawyer)—Pointed bud of brilliant deep golden-yellow. Awarded gold medal, N. R. S.

ETOILE DE LYON, (Guillot)—Bright sulphur-yellow; fine form, large size; a fine yellow Rose.

LADY PLYMOUTH, (Alex. Dickson)—A most meritorious Rose of the "Souvenir de Pierre Notting" type; deep ivory-cream petals.

CLIMBING HELEN GOULD, (Good & Reese)—Everybody is familiar with the warm watermelon red color of its charming flowers. This is a grand climber.

SEND ONLY 2 YEARLY SUBSCRIPTIONS

at \$1.00 each for *American Agriculturist* and the 18 Rose Bushes will be sent you as a Gift in time for planting. Renewals as well as new subscriptions count.

Molasses Goodies

Recipes by Mabel Fern Mitchell

WHOLESOME, sweet molasses is one of the best ingredients to be found for making candies, cakes, cookies and breads. Then too we find there is not so much danger of over-eating candy made of molasses.

With the price of sorghum hovering around a dollar a gallon and molasses up in price too, it behooves us to study ways of conserving it. When ever you are measuring sorghum or molasses, first grease your measuring cup or spoon, and you will find out that every drop of the syrup will come out. This is far better than the old method of leaving the sides well coated with good thick syrup.

The recipes given here are for cakes, cookies and hot breads, which can be made with molasses. Next time I will give recipes for molasses candies.

Ginger Cookies

Put in a teacup half a teaspoon ginger, a teaspoon soda, half a teaspoon cinnamon, three tablespoonfuls of melted shortening, three tablespoonfuls of boiling water, and fill the cup with molasses. Add flour and mix rather soft. Roll thin and bake in a quick oven.

Ginger Snaps

This recipe has been in use ever since 1860, and they have been taken to the Fairs several times, and always take a prize. 1 cup brown sugar; 2 cups molasses; 1 cup shortening; 1 tablespoon strong ginger; 2 teaspoons salt. Place all in a mixing bowl then take one tablespoon soda and put in cup. Fill cup with boiling water. When it has foamed, pour in dish on other ingredients. Stir until mixed and then add sufficient flour to roll, soft enough to handle easily, but roll thin.

Corn-meal Cookies

One-half cup shortening; ½ cup corn syrup; ½ cup molasses; 1 egg; 6 tablespoons sour milk; 2 cups corn meal; ½ teaspoon soda; 1 cup flour; 1 teaspoon cinnamon. Combine the melted fat, syrup, molasses, beaten egg and sour milk. Sift together the corn meal, flour and soda. Add the liquid ingredients to the dry. Drop by spoonfuls into a greased pan and bake fifteen minutes in a moderate oven.

Ginger Muffins

3 cups flour; ½ cup brown sugar; 1 cup molasses; ¼ cup shortening; 2 eggs; 1 teaspoon soda; 1 tablespoon ginger; ¾ cup sweet milk; 1 tablespoon cinnamon; 1 teaspoon salt. Cream sugar and shortening. Add molasses, then eggs well beaten. Next ginger

and cinnamon and alternate milk and flour, the soda having been dissolved in the milk. Bake in well-greased muffin rings.

Bran Bread

3 cups whole wheat flour; 3 table-spoons molasses; 1 teaspoon soda; 1 cup bran; pinch of salt and 2 teaspoons baking powder. Buttermilk to make a soft dough. Stir all together until thoroughly blended, and bake in a moderately hot oven about forty-five minutes. Bake in tall cans so as to not have too much crust.

Boston Brown Bread

1 cup graham flour; 1 cup yellow corn meal; 1 cup wheat flour; 1 cup seeded raisins; 1 teaspoon salt; 1 pint sour milk; ½ cup molasses; 1 teaspoon soda. Mix thoroughly and place in molds or cans. Steam one hour in Steam Pressure Canner with pet-cock open. Then close pet-cock and run pressure to fifteen pounds and hold for ten minutes.

Mother's Ginger Bread

½ cup sugar; 2 eggs; 1 cup molasses; 1 cup thick sour cream; 1 teaspoon soda; 1 tablespoon ginger; 1 teaspoon salt. Flour to make a thin batter. Just before taking from the oven, sprinkle scraped maple sugar and a few chopped nuts over the top. Or cut in squares and serve with a good sauce, either marshmallow or chocolate. Better still, whip some sweet cream and put over it just before you are ready to serve it.

Gingerbread Pudding

Crumble 2 cups of stale gingerbread and add to it two cups of sifted flour; two tablespoons sugar; ½ cup molasses; ½ cup seeded raisins; ½ cup almonds; 1 egg well beaten and a small pint of milk. Beat well and turn into a buttered mold and steam two hours. Serve with marshmallow sauce.

Eggless Suet Pudding

Use 1 pound suet, chopped fine; ½ pound citron; 1 pound stale bread, chopped; 1 pound each of raisins and currants; 1 cup molasses; 1 and one-half pounds sugar; 1 pound English walnuts; 2 cups flour; 1 teacup milk; 1 heaping teaspoon baking powder; ½ spoon soda; 1 spoon each of salt, nutmeg and cinnamon; and ½ spoon cloves. Steam at least four hours in open steamer, and one hour in steam pressure with pet-cock open, and then half an hour with pet-cock closed, and with ten-pounds pressure.

A DRESS FOR WORK AND A NEGLIGEE FOR LEISURE

FIRST, a housedress for plaid gingham or any similar fabric, with white cuffs and collar. The dress has a lacing in front which permits it to slip on easily over the head.

No. 1354 cuts in sizes 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3¼ yards 36-inch material, with ½ yard 36-inch contrasting and 6½ yards binding. Price 12c.

And when you rest, use No. 1660, which is a dainty negligee cut in one piece and which can be run up in an hour or so. Stitch up the side seams, finish the neck and slashes for the ribbon belt, and if you use the ruffled edge, sew it on.

No. 1660 needs but 2½ yards of material, and comes in 3 sizes—small, medium, and large. Price of pattern, 12c.

Our Spring Book of Fashions, containing all the new models for the coming season is ready. It contains pattern styles for the whole family, and money can be saved by referring to it in selecting the Spring wardrobe. In addition to over 300 styles, there are pages of embroidery designs, styles worn by movie stars, and dressmaking lessons to help the beginner. The price is 10c per copy. Address your order for patterns or catalogues to Fashion Department.

Taking Stock of Health

Room For Improvement in Many Communities

THIS is stock-taking time. Merchants everywhere are going over their last year's records, writing off losses, seeing where they made mistakes and making plans for a profitable year to come.

There is a hint in this, not only for each of us individually, but for communities as well. One of the most valuable possessions which anyone can have is health, and we are gradually learning that health is a purchasable commodity.

It must be bought, however, not only with money, but with time, effort and thought as well. What each individual does, affects the health of the community as a whole; while the general health standard of the community cannot fail to help or injure the individual.

Tell us of Your Progress

Every year there are fewer "health heathens" in the United States—fewer men and women who disregard elementary health laws for themselves or oppose progressive measures to safeguard their children. But carelessness and indifference can be as dangerous as active opposition. The healthy community is the one where nobody "gets tired" of constant effort to reach a higher standard.

Fortunately not all of us have to contend with the ignorance and prejudice described by the author of the following letter. But when stock-taking times comes around, it is well for all of us to stop and think whether our community is actually advancing or merely marking time.

Many communities, however, have made splendid progress in health conditions, and we all ought to know about their work. Letters telling what has been accomplished and what is planned for this year will be very welcome. Pictures, if they are clear and definitely illustrate the subject, will also be acceptable. Sit down and talk things over—it will give you fresh enthusiasm in starting out to hang up a record for this year.

ARE WE HEALTH HEATHENS?

The community nurse examines the 54 children in our district some few months ago, and the parents are fuming and fussing yet, as to why the County Superintendent should send a nurse up here to do such a thing. I don't think there was a perfect child among them—nearly all of them had bad teeth, enlarged tonsils, adenoids, and some of them had weak eyes, and one had tuberculosis.

This little chap took a severe cold which developed into pneumonia, and died after four weeks illness. His old-fashioned grandmother was the family doctor and she doctored him with teas, blisters and plasters. They didn't need a doctor, she told her daughter, 'twas only a cold, and he'd get over it. When the child finally refused to eat, they sent for the physician.

Not one of the other 53 children have had their physical defects corrected or removed. When anyone falls ill, the neighbors are called in to give their experience and assistance. In maternity cases a nurse is unknown; usually some woman who is the mother of seven or eight, is called in. One woman here has had seven children and never a physician at hand at their birth. When the children are born they are fed when hungry, and one-half of them never know what a bath means. From their birth they are fed anything that grown persons eat.

And now, in looking over a recent copy of our county paper, I see that the community nurse has been forced to give up her position owing to the lack of funds to carry on the work. Throughout our entire county there is a general belief that a nurse

isn't essential and that it's all a political scheme to obtain a few more dollars. People don't seem to take a common sense view of the matter and realize what it would mean to their children, and to their children's children.

In most of the families you find the idea prevalent that all children must, at some time have such diseases as whooping cough, measles, chicken pox and the mumps. I had the whooping cough when nine years old, but so far have successfully evaded the other diseases. I can't see why people will believe that a child must have those diseases. If that is so, why wouldn't it be safe to say that they must have scarlet fever, small-pox, typhoid fever and influenza? It seems to me that one idea is about as sane and sensible as the other.

I have known persons whose belief was so strong that they have actually taken their children into homes where such diseases were, just because they believed they had to have the measles or the mumps and the younger they had them, the better off they'd be. I know of one case where just such deliberate exposure of children to contagious disease resulted in the death of the mother and three children out of a family of eight. Another woman of my acquaintance did that and her baby, only eight weeks old, died. So, as long as I can avoid it, I'm going to keep myself and my children away from all such diseases.

Sometimes, when I hear the missionaries preach about the superstitions of the heathens, I wonder after all, if they are really any more foolish than the old signs and sayings our grandmothers cling to as their mothers did before them?

HAVE YOUR CHILDREN READ THESE BOOKS?

If you were choosing 25 ideal books for children, which would you pick as the best in the English language? Two national organizations, The American Library Association and the National Educational Association, combined to make up a list of twenty-five, and on careful reading, it seems to be a very well-chosen selection. The list is as follows:

Little Women (Alcott).
Tom Sawyer (Mark Twain).
Boys' Life of Lincoln (Nicolay).
Fairy Tales (Anderson).
Robin Hood (Pyle).
Tales from Shakespeare (Lamb).
Boys' King Arthur (Malory).
Rebecca of Sunnybrook Farm (Wiggin).
Christmas Carol (Dickens).
Hans Brinker (Dodge).
Wonderbook (Hawthorne).
Heidi (Spyri).
Robinson Crusoe (Defoe).
Treasure Island (Stevenson).
Jungle Book (Kipling).
Fables (Aesop).
Child's Garden of Verse (Stevenson).
Arabian Nights.
Story of Mankind (Van Loon).
Mother Goose.
Rip Van Winkle (Irving).
Boys' Life of Roosevelt (Hagedorn).
Wild Animals I Have Known (Seton).
Home Book of Verse (Burton E. Stevenson).
Alice in Wonderland and Through the Looking Glass (Carroll).

Are there any favorites which our readers think have been omitted, or would they substitute any more recent books for some of the old favorites? We should be glad to hear how many school-rooms, libraries and home book-shelves are equipped with either all or a large part of this well-rounded list of standard children's books.

cording to his mother has always been fed carefully prepared milk, and is thriving on the diet she gives him.

Another "A. A. Baby" is "Junior" Hart of Rush, New York, who at the age of two has taken up floriculture. Junior, ac-

Reviewing the Latest Eastern Markets

NEW YORK EXCLUDES SMALL LIVE ANIMALS

IT is reported that the New York City Health Department has issued a ruling prohibiting live pigs, lambs, goats, rabbits, hares and other small animals from being sold in New York City except for breeding, and when sold for food purposes they must on arrival be sent to a slaughter house and killed before being offered for sale. This ruling will practically prohibit the shipping of such live animals, as the expense of carting to and from the receivers' stores and having the stock slaughtered is too great. It will, therefore, be necessary for shippers to kill and dress the stock before shipment. Further information regarding this ruling and the proper method of dressing and shipping will be given in next week's issue.

The Lenten season commenced with Ash Wednesday and demand for dressed calves and other meat will probably be lighter from now on until Easter, which occurs April 1. A considerable surplus of calves and other country dressed meat is held in the country because of snow, and as soon as shipping conditions become normal there will probably be an oversupply, with very low prices. Shippers are advised not to dress meats for this market during the next month.

WEATHER STRENGTHENS POTATO MARKET

The extreme cold weather last week interfered with loading and unloading of all vegetables and fruits. Prices tended to be firmer at New York in anticipation of lighter receipts but supplies on hand could not be moved readily.

State potatoes moved in a small way from western New York for \$1.15 cwt. in bulk and \$1.80 per 150-lb. sack delivered New York City. Round whites, bulk per 180-lbs. No. 1 sold at \$2.50 to \$2.60. Growers were offered 40c per bu. and were inclined to stop hauling.

At Rochester and nearby, market was dull and movement slow. Round whites U. S. No. 1 sold there Feb. 15 at mostly \$1.35 to \$1.40 per 150-lb. sack, with a few at \$1.45.

Maine shipments are running very light owing to cold and car shortage, and are going mostly to New England cities. Shipments so far this season from Maine are over 7,000 cars short of last year to same date.

Carlot shipments of old crop potatoes in entire country are 74,000 cars below last season. New crop shipments to date are 25,461 cars, compared with 19,005 to same date last year.

Danish cabbage has been in demand. Best quality sold as high as \$40 per ton. Receipts light.

APPLES MEET GOOD MARKET

Barreled apples were fairly plentiful last week at New York but prices held steady especially for fancy McIntosh, and Northern Spy, which were much in demand. Trading stopped on account of weather at end of week.

Carlot shipments of barreled apples this season up to Feb. 10 in entire country were 54,324, as compared with 32,078 all last season. New York State shipped 22,785 cars this season compared with 17,806 total last season.

Wholesale prices at New York Feb. 16, were:

APPLES—	Best	Fancy	Ordinary
Baldwin...	\$4.50@4.75	\$5	\$4 @4.25
Greenings...	4.25@4.50	4.75	3.75@4
McIntosh...	12 @13 14 @15	8	@10
N. Spy...	6.50@7	7.50@8	5 @6

Pears from storage continue to be in light demand and the market dull. Liberal holdings are reported in the Rochester section. Kieffer, per barrel, sold, best, \$3 to \$3.50, with a few sales of extra fancy at \$4.25 to \$4.50.

BUTTER STILL FLUCTUATING

Wholesale butter prices are now fluctuating up and down, as so often happens in February. Remaining stocks of storage butter are very light and prices are now low enough to shut off Danish importations.

Cold weather in the West checked the increase in fresh production. If fresh butter moves promptly the mar-

ket should not show extreme changes for the rest of February. Last year in 22 business days of February, the price of extras changed 11 times, and in 1921 there were 14 changes in 22 days.

All grades of creamery butter were ½ to 1c higher on February 15 than a week previous. Creamery extras, which sold at 50 to 50½c, were last year on the same date only 37 to 37½c lb.

The market for cheese is irregular, and fresh cheese prices both east and west are gradually weakening. In Wisconsin fresh makes declined a cent a pound in one week. State flats, fresh, average run, were quoted at 25½c lb. Holdings of cheese in public storage houses in four large cities, February 14, were 8,712,177 lbs., against 7,199,773 lbs. on February 14, 1922.

EGG MARKET ACTIVE

The tendency toward increasing supplies of fresh eggs was checked by the cold weather in the west and later in the east. The market at the close of last week was strong and active, with tendency toward higher prices providing weather continued cold. Storage and western eggs advanced and Pacific

winter bran, and middlings. Market firm and inclined to work higher. Quotations on carlots f. o. b. Buffalo in 100-lb. sacks, February 14, were: Gluten feed, \$46.50 @ \$47; cottonseed meal, 36 per cent, \$48.50 @ \$49; oil meal, 33 to 34 per cent, local billed, \$51 @ \$51.50; standard spring bran, \$33.75 @ \$34; hard winter bran, \$34.25 @ \$34.50; standard spring middlings, \$33.75 @ \$34; choice flour middlings, \$36.25 @ \$36.75.

Following were prices in feed grains per bushel: No. 2 yellow corn, 86c.; No. 2 white oats, 52½c.; barley, feed, 74 @ 76c.; rye, No. 2, 99c.

HAY PRICES ADVANCE

Owing to limited number of permits issued by the railroads for shipping hay to New York, the market has cleaned up old accumulations and taken on a firmer tone. Lower grades are not much in demand. Buying has been active on better grades. Some premiums paid above quotations.

DULL MARKET FOR BEANS

Trading in beans is very light, but pea beans are a little firmer. No sales reported over \$8.50 per cwt., however,

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on February 16:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.
New Jersey hennerly whites uncandled, extras...	45@47
Other hennerly whites, extras...	43@44	43@44	...
Extra firsts...	42@42½	...	39
Firsts...	41	...	38
Gathered, whites, first to extra firsts...	41@42½	40@41	...
Lower grades...	39@40
Hennery browns, extras...	43@45
Gathered browns and mixed colors, extras...	38@42
Pullets No. 1...	38@39	40@41	...
Butter (cents per pound)

Bulls, common to good...	3½ @ 4	4 @ 6¼	...
Lambs, common to good...	9@11½	15 @15¼	...
Sheep, common to good ewes...	3½ @ 5½	7½ @ 8	...
Hogs, Yorkers...	9 @ 9¼	8¾ @ 9	...

Coast whites to a less extent. Nearbys, except New Jerseys, were 1c. higher on Feb. 15 than a week previous.

Cold storage stocks have been working off rapidly. Only 18,712 cases of storage eggs were on hand at New York February 15, compared with 17,259 cases on the same date last year.

BROILERS, CAPONS, DUCKS WANTED

At this time of the year the demand is stronger for lightweight fowls, and both capons and boilers are selling very well. Most of the chickens arriving now are staggy, generally little better than old roosters, and the market for them is weak.

GRAIN PRICES DROP SLIGHTLY

After about three weeks of an almost uninterrupted advance, grain prices suddenly dropped on February 15. Future grains are sensitive at present to the European situation. Rye, trading is light.

Cash grain prices February 15 follows: At New York—Wheat, No. 2 hard winter, \$1.31½; corn No. 2 yellow, 91½c.; oats, No. 2 white, 57c.; ordinary white, clipped, 55 @ 57½c.; rye, \$1; barley, 81 @ 82c.; buckwheat, \$1.98 @ \$2.25. At Chicago—Corn, No. 2 yellow, 73½ @ 75c.; oats, No. 2 white, 46 @ 47c.; barley, 64 @ 68c.

FEED BUYING ACTIVE

Trading in feed was active last week and prices advanced on cottonseed meal, oil meal, standard spring bran, hard

Marrow beans received little attention, the few sales being at \$10 to \$11. Medium, 1922, quoted at \$8.25 to \$8.50.

INSULATING AN ICE HOUSE

I have built a frame ice house 20 x 30 x 20 feet deep, 10 feet in the ground. I have used plain boards for the outside. Will it be good to use same kind of boards for the inside and the sawdust in between the boards? If this is any good, how thick will the sawdust be to keep the ice in good condition and what kind of ventilators, and how many tons of ice will fill the place.—(S. R. Pennsylvania.)

In order to make the walls of the ice house have good insulating action, it is necessary to put sheathing both inside and outside the studs, and fill in the spaces between with some insulating material, such as ground cork or coarse sawdust. Ground cork is considerably better, but it is sometimes difficult to obtain. The sawdust will do very nicely and is quite effective. The thickness of the sawdust ought to be six or eight inches, and this can be accomplished by using studs of this width. When the ice is put in a space twelve inches wide should be left between it and the walls and filled later with packed sawdust. A layer of sawdust a foot thick should be piled over the top of the ice also. An icehouse of the size you mention will hold approximately 250 tons of ice, depending on how it is packed and how completely it is filled.

Says Sam: The fellow who can do the most for you is the fellow you see when you shave yourself.

Pay in 3, 6, 9 or 12 Months

Farmers! Hartman says: "Take your own time to pay for anything you buy from the big Bargain Catalog. If you have notes to meet, accounts to settle, repairs to make, or anything else to do that calls for cash now, use your money for those things. But don't put off ordering what you want from Hartman, because *Hartman will wait for his money*. No need to put off getting your needed farm equipment or your house furnishings. Send for them and pay when you have harvested your next crops—or any time you find it convenient. Take anywhere from 3 months to a year. Pay all down when ready or pay on easy terms. Decide for yourself which payment plan will be easiest for you."

No Interest to Pay!

All you pay is Hartman's Catalog price—no interest. The most liberal terms ever made by any house in the world.

A wonderful offer—yes! And here is the reason for it. Hartman knows what the farmer is up against. He knows the prices that farmers have been getting for their products and he knows the farmers' cost of living, made high by paying big store prices fixed by middlemen. Hartman is going to help to ease the situation, he is going to help his farmer friends get on their feet again. His prices have always been lowest because he has sold direct. Hartman's prices don't include salaries for traveling men, nor jobbers', retailers' or brokers' profits.

SEND for the Big Bargain Catalog

The Special Plan for Farmers is fully explained in Hartman's great catalog, which also shows you the world's greatest bargains in everything for home and farm and tells how you can get wonderful articles FREE as gifts from Hartman. Send the coupon—now.

All that load of middlemen is cut out. And now he is arranging payments to suit the farmer, giving him all the time he wants by letting the farmer pay when convenient. Easiest terms ever offered. Hartman realizes that the farmer is not like the city man with a regular weekly or monthly income. He knows that the farmer's chief revenue comes at longer periods; he knows that a crop failure, a cattle or hog disease or a market slump may make him short of funds for a long time. So Hartman says to the farmer: Send for anything you want—pay when you can—I'll wait for the money. THIS NEW HARTMAN CATALOG offers you POSITIVELY UNEQUALLED SAVINGS—bargains that are simply irresistible—on the most desirable qualities of select merchandise. When you see these SMASHED PRICES you will realize that Hartman is breaking all records, giving the most AMAZING VALUES offered in years—and you, the Farmer, can buy now and pay when you please.

Making Gardens Yield Their Limit

Definite Suggestions For Bringing Down the Farmers Cost of Living

CHICKENS are kept on your farm, of course. Are you right up-to-date in feeding them? Our little flock gives us wholesome work and also eggs for the family. And it has occurred to me that those busy-bee hens are not unlike the garden vegetables in their feeding habits. In the first place, the hens must have some litter—clean, sanitary and of the right texture, in order to induce vigorous scratching and proper exercise. So must the roots of plants have a satisfactory medium—the soil, which must be sanitary and of the right texture and moisture content.

Again, these persnickity hens insist on a ration almost equal in variety to a banquet served in New York's swellest restaurant. Give them corn and any one or two other articles of food and they will rebel and not lay an egg until springtime comes and they get good and ready. So it is with vegetables. Give them nitrogen only and they will all go to leaves, or feed them with the mineral elements only and the yields will be disappointingly small. The hens demand a dry mash with a mixture of egg producing materials and a grain mixture of corn, wheat, oats, buckwheat or other grains in variety. And the farm garden must not be lacking in any element of plant food, if all the vegetables are to thrive.

Inasmuch as a great many different kinds of vegetables are grown in the farm garden, fertility conditions suitable to all of them must be maintained. If we were to grow only one crop, such as, tomatoes or celery, the problem of supplying the needs would be simplified. Tomatoes, for example, do not require as high fertility as celery, and each garden crop has its own special requirements, to some extent at least. Because of this difficult situation it is necessary to supply plant food and organic matter in sufficient quantity to meet the needs of all the crops to be grown, in order that no one vegetable will suffer, and at the same time, not to add anything in such forms and amounts as will be disastrous to any crop.

Thousands of farmers, anxious to maintain the highest fertility in the farm garden, apply enormous amounts of stable manure to the garden annually and when any of the crops fail, they wonder what the trouble is. And a fairly large percentage of gardens treated in this lavish manner do fail sooner or later. It is like feeding the hens all corn. Well preserved manure is rich in nitrogen, but does not contain enough phosphorus to meet the full requirements of most, if not all of the vegetables, and it may be short in potash, under certain conditions. A few

By R. L. WATTS

years ago I visited a market gardener who was grieving over a small crop of cabbage on a heavily manured plot. The outside leaves were very large, but the cabbage heads were very small. No mineral fertilizer had been applied.

But let us remember that a large amount of humus in any garden soil is absolutely es-

The long list of products from a good garden keep down the cost of living and add much to the health and happiness of the farm home

sential. Without a liberal amount of organic matter the soil becomes hard, compact, lifeless and unproductive. It is all right to use plenty of manure every year, but it is all wrong to rely wholly upon manure.

How much manure to the acre? That depends. Some heavy clay soils need more than the naturally friable, sandy loams. Peter Henderson, the veteran, pioneer Ameri-

can gardener, often used 75 tons to the acre. Very few gardeners of to-day can find or afford to apply more than half this amount, and if they can use twenty tons to the acre, they are indeed fortunate, except in the most intensive operations. If the farm garden receives an annual application of 25 tons of manure to the acre, the supply of organic matter should be adequately maintained.

Fresh stable manures are injurious to some garden crops, especially to the root crops, such as beets and carrots. They tend to produce foliage instead of the desired edible parts of the plants. For this reason, market gardeners generally compost the manure and there is no reason why every farmer should not treat the manure in this manner for the home garden. The usual plan is to tramp the manure in large flat piles with rectangular sides. It is an advantage to water with a hose occasionally to hasten decay and to prevent firefanging.

If composted in a moist condition for at least six months, all the weed seeds will be destroyed and this in itself is a strong argument for composting. Though the coarser partly decayed manure should be applied before the garden is plowed, the best results are obtained by applying well decayed manure after the garden has been plowed and then use a disk harrow to thoroughly mix it with the soil. In small gardens which are spaded, the manure should be applied before the ground is spaded.

Poultry droppings, because of their fine texture and high fertilizing value, are especially desirable for use in the garden. They should be spread lightly, after the ground has been spaded or plowed, and then harrowed or raked into the soil. Their value will be enhanced if acid phosphate is sprinkled on the droppings as they are collected from day to day.

Gardeners are appreciating more than ever before the necessity of keeping the vegetable plats well limed. Fifty bushels of burnt lime to the acre, applied every four or five years, will maintain an alkaline condition in the soil and make it easier to cultivate. The lime should not be applied with the manure, if this can be avoided.

I doubt whether any farm gardener can afford to do without commercial fertilizer of any kind. Practical experience and numerous investigations show that applications of acid phosphate nearly always give increased yield and larger profits.

Most soils are lacking in this plant food and, as previously stated, stable manures do not contain it in adequate amounts. It is probable that most farm

A hot bed can be easily constructed at little expense and it will greatly extend the season and results from the home garden

The Home Garden

PERHAPS you will note as you look through this issue of *your paper* that we have made a little attempt to give you something special in the way of a Spring and Garden Number.

One of the things we try not to do is to "preach," but we do wish we could drive home the thought some way that farmers and their families would get more out of life and be much better off if they would grow and use more of their own products. One way to do this is to grow a larger and better home garden. A variety of vegetables, and it is surprising how long the list of different kinds is, add much to the attractiveness of the table and to the general health of the family.

But on most farms the home garden is considered of little importance. Where there is a good garden the women of the family are usually responsible and there is much growling and grumbling from the men folks when they are asked for a little needed assistance. Men usually feel that they have little time to bother with a garden, but we claim it is the most profitable time spent in the farm work.

Artificial Rain Making

THE other day a man at Dayton, Ohio, went up in an aeroplane above a cloud and by dropping some electrically charged sand into the cloud, he precipitated the moisture and caused it to rain. After many generations of experimenting to control weather conditions there is now considerable hope that the amount of rain-fall can to a certain extent be controlled.

All of us are familiar with the fact that day after day during a drought, clouds loaded with moisture constantly pass over-

head to unload their water into the ocean or into some section where it is not needed. If it were possible at a reasonable expense to make these clouds discharge where rain is most needed, the possibilities to agriculture therefrom can hardly be estimated. The amount of rain-fall determines crop production more than any other factor or more than all other factors put together. If, therefore, men can determine the amount of rain-fall, bumper crops can be assured every year and less farmers would be needed to feed larger city populations.

The Rural School Bill

A BILL has been introduced in both the New York State Assembly and Senate, which includes the fundamental suggestions made by the Committee of twenty-one to improve the rural schools. This bill should become a law.

Every rural school patron knows what the Committee of twenty-one is and why it was organized. The committee represents both farmers and educators, with the farm representatives in the majority, and it has been working for three years studying the rural schools and bringing the results of its findings to the attention of farm people. Well advertised mass meetings have been held in every section of the State where the people were asked what they thought should be done to improve the schools. Lengthy questionnaires were sent out to the different local farm organizations to get in detail their suggestions. The subject has been discussed in practically every one of the nearly one thousand subordinate Granges in the State, and many of these Granges have had the subject up several times. Within the last few months about four meetings have been held in practically every rural county in the State where the recommendations of the committee were explained to the people and their suggestions and reactions secured in return. In addition to this, the subject has had lengthy discussion in the farm papers and in the daily and weekly press. In spite of what those who are opposed to any changes in the schools may say, the proposals in this bill have had more preliminary discussion by those most concerned than any other bill that has ever been introduced in the Legislature. Complete information has been the one fundamental principle that the Committee of twenty-one has worked on all of the time.

Of course no matter how many meetings were held or how much publicity was given, there would always be a minority, usually those who will not take the time to go to a meeting or to study a question carefully, who will claim that they have had no opportunity to understand. All that can be hoped for on any great question is an approval of a majority.

Many claim that this bill ought to go over for another year. If it does its enemies will defeat it. Almost without exception farm people who have been interested enough to study the principles involved, have approved them. But there is a lot of prejudice surrounding the school question and while the majority favor giving the boys and girls in the country a better chance, the minority have more time and opportunity to work against the bill than those who really favor it have time to work for it.

Something for school patrons to think about is the fact that a big change of some kind is coming very shortly in the administration of the country schools. The question is, do you want this change to be along the lines that will give you more control of your schools, or do you want some system put over that takes away local control? There are many in the State who favor a county unit of administration and compulsory consolidation, and among these are those who

are trying to defeat the principles advocated by the Committee of twenty-one.

The committee favors the community unit of taxation and administration. It favors keeping the district boundaries where they are now, such boundaries to be changed only upon vote of the rural people themselves. This means consolidation only where the people want it. The suggestions of the committee call for better prepared country teachers and more State aid for a country schools. These recommendations, in a nut-shell, are the fundamentals. If these principles are put into effect, the details will adjust themselves.

This is the most important educational measure of a generation, and we know that those most interested in the welfare of country boys and girls will not let prejudice, misunderstanding or propaganda interfere with their good judgment in the matter.

Farmers' Weeks Help

NEW YORK State College of Agriculture has just closed another Farmers' Week. Bad roads and hard times affected the attendance as they have most other meetings this year. Yet all who went to Ithaca to meet their fellow farmers from all parts of the State and to attend the lectures, conferences and entertainments, returned to their homes with new knowledge and inspiration with which to meet the problems of the coming season.

It has not been so many years since the average farmer looked with contempt and ridicule on those who thought farming important enough to study as a great trade or profession. The "book farmers" were curious freaks to be tolerated perhaps, but not to be taken seriously. This attitude was perhaps the outgrowth of a feeling that anyone who failed at anything else could still make a living from the soil. Times change. Whether or not it was once true that "any old fool could farm it," that day is forever past and Agriculture has become a new business requiring great ability and trained skill, and with this change there has come a different attitude on the part of farmers themselves toward scientific agriculture and the farm schools and colleges. One only has to visit a Farmers' Week at any of the colleges and note how eager the farmers themselves are to learn something more that will enable them to become better husbandmen, to see how completely they have come to recognize the necessity of trained knowledge in the business.

But Farmers' Weeks provide something more than the technical discussion of farm problems. They recognize that farmers like other folks are interested not only in making a living, but in learning how to live. So their programs are well provided with entertaining features. We were particularly impressed in noting how farm folks seem starved for entertainment. They have altogether too few good times and those who have to do with programs for meetings and with writing which farmers read, will do well to recognize that country people are looking for something to give them a little inspiration and a little wholesome fun in addition to the more technical discussions about their business.

Quotations Worth While

Nature has written a letter of credit upon some men's faces which is honored almost wherever presented.—THACKERAY.

* * *

Peace does not dwell in outward things, but within the soul. We may preserve it in the midst of the bitterest pain, if our will remain firm and submissive. Peace in this life springs from acquiescence even in disagreeable things, not in an exemption from suffering.

What Is Wrong With The Country Church?

Prize Winning Letters Answer This Vital Question

THE church is indispensable to the development of an adequate rural civilization. It must, however, adapt itself to changing conditions.

The greatest need, perhaps, is that every country-side home should have contact with a church. Generally this will be through the pastor's personal visitation.

Then, denominations should have definite rural policies. Superfluous churches should be abolished; many could be federated; but all should cooperate heartily together. The function of the country church should be clearly defined, and also its place among other agencies in the rural community. It should have a clear cut program of activities suitable to its great mission.

To-day there is a world significance to every church. This would be more deeply established in the minds of the rural community, and react to the benefit of the church, if the church paper were generally read.

A working alliance should be formed with specialized agencies of the church, like the Y. M. C. A. and the Young Peoples' societies, as well as with the so-called secular institutions, on behalf of a broad and progressive community-building program in rural regions. Home Mission boards should plan to provide adequate financial support for worthy rural projects.—DAVID L. JONES, West Exeter, N. Y. (First prize).

The Church Has a Vital Task

A gentleman said to me some time ago, "The day for the country church is done." You would almost think he was right in going around the country and finding so many churches closed and falling to pieces. Someone else has said: "The country church will not die, the danger is that it will become a chronic invalid and fail in its great mission of helping country people win their spiritual battles." The task of the country church is the same as it ever was, which is to save men's spirit and make them one with God. It has a vital task to perform. No other organization can perform it. As a representative of a country church I am convinced we have not grown with the times. Therefore we are not able to meet the new spirit of the age. Our program is inadequate to the changed conditions of rural life.

The problem is how to grow and formulate a suitable working program. Shall we grow along the lines of the Scotchman's prayer "God grant I may be right for ye know I never change?" That does not spell growth, but stagnation. We must grow strong to meet the needs of our day and generation. The traditions of the past must take hold of us, but must not overwhelm us.

Now for the program:

1. The country church must preach and teach a sound gospel of salvation.
2. Our program must be progressive and aggressive. Big enough and large enough to comprehend all the essential interests of the community.
3. It must not be afraid of the farmer. It must strike hard and lead him

out of his individual isolation to a true sense of cooperation. From narrowness of mind and heart and false independence to a better understanding of his fellowmen.

4. It must convince him to put the church first, not to substitute either Grange, Lodge or any other organization in its place.—JOHN G. MYERS, Ogdensburg, N. Y.

Awakening Must Come From Within

I have set forth a few points which I think have greatly influenced the rural church;

The Best Church Letters

JUDGING the best country church letters was certainly a job. There were over 250 of them and they were surprisingly good. Probably if you were to read them all you would disagree with us as to which were the prize winners. But we have done the best we could and are publishing the prize winning letters in their order on this page. There were a number which covered more points and were really better letters than the ones to whom we gave the prizes, but they did not stick to the rules and were too long.

We are publishing some of those that did not win prizes also and hope to print some more in coming issues. All of those published will be paid for.

One of the surprising things about this discussion is the tremendous interest in the vital problem of religion. People seem to be groping in the dark for some spiritual help and guidance, and unfortunately the churches seem to be failing in the spiritual leadership which is so badly needed.—The Editors.

First: Our Public Schools.—Most of the settlers of the East came to America for religious liberty. Freedom to worship God was their noblest heritage. By the side of their rude churches stood the school house. The teacher, generally the chorister, a Godly man. Text books were few, but the Catechism, the Testament, the Psalter with a little ciphering and penmanship were studied. The ten commandments with their application to daily life were indelibly impressed upon their minds. Their lives were examples of what they were taught. How everything is changed!

Second: The Press.—Newspapers and books have multiplied rapidly. Daily papers and magazines cater to the reading public. The Bible, the Hymnal, the Sunday School lesson is laid aside for cheap fiction. The mind becomes drunk and no longer craves for the good, the pure and holy.

Third: The Church Itself.—Conditions are vastly different in every way. Great progress has been made in transportation, manufacture, farming and business. Are the methods of the church not far behind

that of the business world? An awakening must also come from within. The church not only ministers to the spiritual, but to the temporal as well. Six days of the week most rural churches are cold and locked. On Sunday, open for an hour or two. No library; no amusements; no social or religious societies.

Arouse the spirit of brotherly love, create a community center at the church. Let it be a place for the living and not only for the dead. And, above all, presided over by a minister that can preach and teach right living, praying and consecration. GEO. J. ROSS, New Tripoli, Pa.

Times Change But Not the Church

The patient who enters a hospital to-day, does not expect or receive the treatment that was given for the same disease fifty years ago, but the few farm families who still attend church hear very much the same kind of preaching that was heard by their parents and grandparents.

The main difference is that there is a lack of the flaming zeal that characterized the old-time preacher, who believed so sincerely in everlasting punishment and the "wrath to come" that he literally put the fear of

the Lord in the hearts of his hearers. Wonderful as some of those preachers were, those of us who remember the long sermons, often terrifying to children are glad that times and thought have changed.

The world has outgrown the old orthodox theology, but it has not and never will outgrow its need of Jesus Christ and His simple doctrine of love and right living. Whether acknowledged or not, there is a need in every human heart for Christian teaching. When the time comes that the clergyman will throw away his outworn creed and dogma and simply and honestly hold up before his people the Son of Man—he will no longer talk to empty seats.—CARRIE L. KNAPP, Oneonta, N. Y.

Why the Church Declined

The decline of our rural churches can be attributed to no single cause. Personalities differ and each type has its own reasons, or at any rate, excuses, for non-support of the church. In tabulating a list of the factors which have led to the decline of the church, I divide them into two groups (1) the causes within the church and (2) conditions outside the church leading to the same result.

Of the causes within the church, I would name the following:

1. Denominationalism. Many persons are disgusted by the petty rivalries of denominations, while the division of the communities leads to inadequate salaries for the minister.
2. Inadequate salaries result in lack of able ministers. The best men are taken by high-salaried city churches.
3. The tendency to change ministers frequently leads to inefficiency.
4. Too much stress is generally placed on abstract theology rather than on the real practical essential of

(Continued on page 193)

This is the first church of Plymouth, (it is really the fifth). The famous burial ground of the Pilgrims is in the rear of the church.

99% Pure — By Test! Lyman's Genuine Grimm Alfalfa

A. B. Lyman

Yes, I guarantee that Lyman's Grimm Alfalfa is 99% pure and back up this guarantee by a standing offer to take back and refund on any of my seed found to contain dodder, quack grass, Canadian thistles or sow thistles.

Lyman's Grimm is positively the hardest alfalfa seed possible to procure. Resists both drought and cold—produces immense yields year after year without replanting. It's a sure money-crop—the leader of forage and the cheapest to produce.

Write for Booklet and Free Sample

Let me show you the big difference between common and Lyman's Grimm Alfalfa. My seed is scarified which assures highest percentage of germination. Endorsed by many Agricultural Societies and County Agents. Every order accompanied by affidavit of genuineness. Write today for illustrated booklet and FREE seed sample.

A. B. LYMAN, Introducer of Grimm Alfalfa 350 Water St. Excelsior, Minn.

QUAKER HILL FARM

K. C. LIVERMORE

Box R, HONEOYE FALLS, N. Y.

As I View Gardening

It Is Apparently a Question of "Who Shall Do It?"

MARK TWAIN once said that a great

By H. E. COOK

peas should be planted about that time, one

deal had been said about the weather, but nothing had ever been done about it, and so a great deal has been said about the farmer's garden, but during my memory at least nothing startling has been done to make it what it ought to be.

H. E. COOK

As I see the case, it is not a technical one, but rather a psychological, temperamental and economic one combined. The person is rare who does not like fresh green vegetables and knows their health value. To the housewife who must prepare three meals a day, vegetables not only have a health value, but their possession becomes an actual tonic to her nerves. I often wonder how women stand up under the strain of originating three meals each day, 1,095 during the year and say 40 to 50 thousand during a lifetime, besides the extras, and still keep a normal level mind. Really the marriage license ought to bind a man to at least work a garden, on the 50-50 plan if nothing more. But what should be and what "does he" are often as far apart as the poles. When we find a situation that is so deep seated that it has become chronic, there isn't much use of expecting to put things right by shaking a wand, we must find out what the causes are that have produced the case.

It is the dairy farm garden that interests me and does a majority of our readers in New York. If a trucker's family does not have plenty of vegetables, looks to me like stinginess or cussedness. But hold on, won't I have to apologize, for what's the difference between a trucker scrimping on vegetables and a dairyman on milk? Garden making is not one of the important jobs on most farms like milking, field seeding, haying and harvesting. It is a piece of work that is done either during spare time or by some member of the family not employed in the regular service. Probably I am not far astray to say that the wife, with some assistance from the children, is the chief garden maker. Please print the word some in Italics, for children do not like garden making.

If the wife is a natural executive this is probably the best general plan for a good garden. In the winter she gets the seeds, starts the tomato and pepper plants, sees to it that stable manure has been applied preferably in the late fall from composted piles left from top-dressing meadows, has the plowing done both spring and fall if possible, and also provides for a dressing of chemical manure after spring plowing and before harrowing, or rather leveling, for on land in garden tilth there isn't any harrowing to do.

Put the Men Folks to Work

Then she can watch out for days when her husband or some of the men folks can help her with the first or early planting, in getting the asparagus bed cleaned off, the pie plant patch spaded and cleaned. Two varieties of

early like the American Wonder and a late, like the Telephone or maybe a third, Champion of England. Put in some early potatoes, garden beets, half-long orange carrots, prizetaker onions, sowed thick, and thinned for early use, lettuce and radishes (there are many good varieties), spinach and parsnips. It is pretty safe to plant a first planting of golden bantam corn at this early planting. If it freezes down, it is a short job to replant and the work is done while steam is up and she has the man power under control.

I find what the man needs most at this time after he is once under way is to be told exactly what to do and to feel that he has no responsibility in the matter. Under these circumstances if he is judiciously handled, not scolded for the mistakes he makes, he will stay until this first planting is done. I suggest to the foreman in this case that she judge not from the standpoint of perfection, but rather from a probably "no help at all" point of view. That is where psychology comes in.

Now if this preliminary adventure has worked out all right, the later and final one will be easier. Now comes the second planting of corn, string beans and lima's, if you can grow them, cucumbers—summer and winter squash, set out the tomatoes and peppers. Sow a few more radishes if you like them.

To be sure the job is only begun, but the same engineering ability that has

gone so far will find a way through. Rather than to fall down by the way there may be some young folks in the neighborhood who would help if paid for their labor. Just before the Fourth and during school vacation if the farm men folks fail to make good, maybe there are children in the family who would under good management weed and hoe.

I can't see anything unrighteous in the wife taking over this business where it is reasonably possible to do so, but when she has to leave her work and the children are galloping off, more energy than would clean up two gardens or the men folks are equally inelastic, then it's an outrage. The garden job is for the whole family because the value of it is for them all and it ought to be so considered. But I think it is the wife's job to order and arrange and stand back of it until the last old blanket is taken off the tomatoes and cucumbers in the fall.

I am perhaps committed to this plan because frankly I don't like to tend the garden. But I do help out under the general direction of Mrs. Cook. She wants a garden, and she gets it, and has flowers in it. Now this garden wouldn't take a prize at a garden show, but at the same time we seem to be living from it all through the season with small fruits on the side.

I haven't said much about the technique of gardening because I don't know much about it. As I see the situation, however, the main thing is to get a few standard plants to grow fairly well that will most interest the rank and file of farm wives and families. In justice to the much discredited men folks let us say that the mornings and nights chore of milking and caring for stock absorbs the time that others who make a garden during these hours. Some folks fail to reckon with that. Maybe it is a fundamental cause why the dairyman's garden is not always what it should be.

Because the women folks like gardening is no reason why they should be expected to do it all

EVERY DAY on YOUR FARM

there is a job
for this Sprayer—

You can get more days of profitable work out of this sprayer than from any other tool on the place. You won't neglect that important job of spraying, whitewashing or disinfecting, when you can do it so quickly, easily and effectively with a

SMITH BANNER
No. 22
COMPRESSED AIR SPRAYER

For spraying against insects and fungus on fruit trees, potatoes, vegetables, gardens, shrubs, berries, grapes, flowers; sprays whitewash, paint, Carbola and disinfectants in poultry houses, stables, barns, washes windows, autos and buggies.

Built to stand hard service and strong chemicals. Heavy 4 gallon galvanized steel or solid brass tank; 2 inch seamless brass pump; all brass castings. Few strokes of pump compresses air to discharge contents of tank; fine mist or coarse spray; brass automatic, non-clog nozzle—no work—just press nozzle handle—acts "Quick as Lightning."

Ask your hardware or implement dealer—you will be surprised at the low price; to avoid disappointment refuse substitutes; insist on the genuine Smith Banner—if he cannot supply you write us for price catalog of over 50 styles of sprayer.

Making Gardens Yield Their Limit

(Continued from page 183)

gardens, when liberally manured every year and also treated with 700 to 1,000 pounds of acid phosphate to the acre annually, will give highly satisfactory results.

But other elements may be needed. It is well to keep a supply of nitrate of soda on hand. Some of this, say 100 pounds to the acre at planting time, especially for the very early spring plantings, generally proves effective. It may also be used as a top dressing during the summer, whenever any crop shows the need of additional nitrogen.

And how about potash? We got along very well without it during the war and naturally we are now reluctant about recommending its use in all cases. But we should keep open minds on this question. The chances are that when prices are reasonable it will pay to use some potash in the home garden. It will do no harm, at least, and why not put in a little potash, just as we add a little buckwheat to the poultry rations.

A liberal supply of fresh vegetables is even more important than an egg basket well filled. And the vegetables have such a high value in producing good health and strong bodies, that we simply cannot afford to take chances in not meeting every possible requirement. So let us use rotten manure, poultry droppings, lime, nitrogen, phosphorous, potassium in proper amounts and, if possible, install a modern sprinkling irrigation system.

The Small Greenhouse for Out-of-Season Crops

More and more is it becoming true that the commercial gardener does not win his profits through doing the thing that any farmer can do. Almost anyone can have tomatoes in August and September. Enough general farmers do have them to wreck the prices on many a market. Pin-money competition does not count the cost in a business-like way. Thus the skillful grower finds that his gains come when the ordinary man is not on the market. This usually means early or late. The early markets are far better than the late ones. To meet this market with several of the leading vegetable crops, it is necessary to set out well grown and well hardened plants. Many men rely for a while upon hot-beds and cold frames. Ordinarily it is not long until the need for a small greenhouse is felt.

With careful selection of material it is possible to build a good little house for a thousand dollars. If the gardener is somewhat of a mechanic—and he usually is—he can do most of the work himself. Pipe for framing and heating can sometimes be picked up at a bargain. A hot water boiler is usually best adapted for the small house; and a used house heater has served more than once. Thus can the cost be greatly reduced and it is surprising how much even five hundred dollars or less will do.

The man who has equipped himself with a greenhouse finds immeasurable advantage in control of growing conditions. Thus he is able to get the kind of plant he wants. Work is also much more conveniently and efficiently done. Many gardeners go into the selling of plants and then, after a time they find it profitable to plant lettuce and cucumbers or tomatoes for indoor crops before and after the plant growing season. Many times have such men grown into the glass-house business until they are able to employ help the year round and so gain a profitable income for every month of the year.

One should not be stingy in the amount of ice to be packed. A few extra tons put in now, perhaps more than you think really necessary, will allow for the wastage that often results from insufficient covering or from any one of several different causes. Usually we run short of ice when we need it most.

Have been a subscriber to the American Agriculturist for a long time and profit a great deal by its advice.—ELMER P. FLANSBURGH, Greene County, N. Y.

FROM A KODAK NEGATIVE

Kodak on the Farm

While there are always pictures for fun, you will especially appreciate the practical purpose Kodak serves on the farm.

The Seed Problem

Buy Early, Carry Reserves, and Test

CLEM GARDNER

By **PAUL WORK**

Has learned that his best paying crop is early tomatoes for the nearby factory town of Hopsaddle. He has four acres of warm sandy loam on the southeast slope of the farm, just below the house. He has built up the

PAUL WORK

fertility of the patch and he sets tomatoes on half each year. His little home-made greenhouse and coldframes, plus some skill and a great deal of care, give him plants that are ready to bloom when setting time comes. Clem has had his seed from a seedsman who grows his own of Earliana and a few other items. He figures that good seed is one of the main reasons for his success. He had never had any difficulty getting this seed, and he was not in the habit of ordering any too soon. He was a bit upset a year ago February when his dealer reported that the crop last year had been a failure and that he was entirely sold out. Gardner had only an ounce left from the previous year, and he had to use what he could get for the rest of the planting. When picking time came, the acre set with plants from the old seed began to yield two weeks ahead of the new, and it yielded the bulk of the crop while prices were still high. The other three acres gave an abundance of crooked fruit, and he had trouble selling at all.

Clem Gardner was mad. It galled him considerably to see Mike Quattrini, the little Italian up on the heavy soil above town, bringing in two bushels to his one during the first few weeks of July. He cut loose at the Grange that Saturday night with the idea that there ought to be laws to keep the seedsmen from selling any but good seed. He was in a mood to put some fire into his remarks, and before long a good, live discussion was going, mostly to the effect that the seedsmen have been cheating the farmer right and left, and that they ought to be prosecuted. After a time, the Lecturer called for William Perrine, who was a little slow on the floor, but who got credit for as much horse sense as anyone else in the Grange.

"I am sure we farmers have been letting some of the seedsmen, produce men, and a lot of others, get away with crimes just short of murder. I'm not sure, though, that the Legislature is the only place to look for help. Laws can help up to a certain point, but good laws can only be made when we can clearly state what is legal and what is not. You can tell whether timothy seed is timothy seed or not, and how much chaff there is in it—or, at least, the experts can. A laboratory can tell how many seeds in a hundred will grow, though they tell me there are questions even there. Laws on purity and germination have helped us a heap in getting good field seeds. Even so, perhaps the greatest help has been in showing us the difference between good seed and bad.

Must Test Seeds as We Do Cows

It would not be easy to enforce a law requiring that no one sell for dairy purposes any but good cows. Who is going to say? What one calls a good cow, another calls a poor cow. Some markets use a Crosby Egyptian beet,

with distinct white rings. Others must have as nearly solid color as possible. We might make it a crime to sell chard for beets or to sell rape for rutabaga, but that seldom happens and our worst troubles concern less distinct differences in type.

"I have no defense for the seedsman that fails to give as good seed and service as we pay for. I have a notion, though, that the fault is partly ours. There are two sides to a good trade—the buyer has a part as well as the seller. Have we not failed to do our part?

"It is the buyer's part to form an opinion as to the integrity of the seller. The seed business is a business of trust, and the integrity of the seedsman is fundamental. Now and then I get a jolt, but not often.

"It is the buyer's part to know just what he wants. I must decide just what suits my market or family, my climate and my land. If catalogue or salesman fails to tell me, I ask whether Gulf State is a red or pink tomato, whether Alpha is a six-row or two-row barley, whether Golden Acre cabbage is as early as Jersey Wakefield. I like to buy as near the source as I can. Less room for mistakes. Seldom does one house get my whole order, and I do not stop on price, provided I am satisfied that I am getting my money's worth in quality.

"Then, when an abig crop depends on a little seed, I buy a year in advance and try it the preceding season. I find now that a few seedsmen are making it possible by the use of stock-numbers or other designation for the market gardener to be sure of getting the same thing again if he wants it and it is available. If we will learn a fraction as much about seed buying as seedsmen know about seed selling, we will be able to get much better than a average seed service."

When the season was over, Gardner sat down with his market book to tally up results.

He had kept careful record of the acre planted to old seed and of one of the three acres planted to the new and untried seed. Here is the table he had when he was done:

Week of Harvest	Average Price p. basket (25 lbs.)	OLD SEED		NEW SEED	
		Yield baskets	Return	Yield baskets	Return
1st.	\$5.00	15	\$75.00	0	\$00.00
2d.	2.45	52	127.40	12	29.40
3d & 4th	1.60	208	332.80	128	204.80
5th & 6th	.90	160	144.00	196	176.40
7th & 8th	.50	40	20.00	158	79.00
		475	\$699.20	504	\$489.60
Difference, \$209.60.					

Difference, \$209.60.

The yields were nearly the same—the late strain giving the heavier crop. Figures are gross and represent the results that a skilled grower might realize when trying at heavy expense for first early market.

That was the last of September, and Clem Gardner decided to take no more unnecessary chances. He thought the necessary chances were great enough. When his State Vegetable Growers' Association met at Summerville in November, he made the trip with the specific idea of finding out more about good seed. He had never been to the meeting before, but he soon found a grower who said: "You want to see Art Freeman from Deerfield. He beats his neighbors by a week to ten days every year. Clem found Freeman, and the two were soon buried in the deep cushions of a settee in the lobby of the Old Windsor. The rest of the session brought out the same story—buy early, carry a reserve, test for the best varieties.

Raspberries For All

Preferences In the Garden Fruit Patch

ONE of the best things to give the children as a relish is fruit. Fruit is not only a food, but it furnishes certain acids, ethers and alcohols to the system and are an aid to digestion.

In some cases there are individuals whose systems do not readily utilize some fruits. This is the case with the strawberry. Some people cannot eat it without feeling the after effects. I have never heard of any such claim being made against the raspberry. It is one of the most highly appreciated of fruits, eaten either raw or cooked.

The raspberry is one of those fruits which is not only desirable to grow, is hardy and highly esteemed, but its cultivation is relatively easy. It can be grown in every garden, little or no spraying is required, and the plants show considerable ability to care for themselves.

Drawbacks that are Advantages

The drawbacks to the extensive planting of raspberries are those which make the crop valuable for the home garden. The crop ripens unevenly and the plants have to be gone over three or four times to harvest it. The labor problem is serious if one has an extensive planting, but a small patch in each garden where the children can earn enough to buy a thrift stamp, is possible on almost every farm.

Picking fruit is an ideal way of extending the activities of not only the rural but the urban population. There are many people to whom a raspberry patch would be an acquisition. The fruit is perishable. It cannot be sent far. As a general statement, this is correct, although red raspberries are sent from the Payallup Valley, Washington, to Pittsburgh, Pa.

The plants can be set out this spring, any time until June. If a neighbor has a patch, a good job for a wet day in the end of May is to go and visit him and dig up some of the young plants which are coming up between the rows and transplant them. Little difficulty will be experienced in making them live. The red and yellow raspberries send up a large number of suckers and are multiplied in this way. Some of the purple raspberries, such as Columbian, are usually propagated by bending the tips of the canes over in August and covering them with soil which enables them to take root. These are dug up the same fall or the next spring and sold as "tip layers." The black raspberries also are propagated in the same way. Plants of named varieties can be easily secured from the nurseryman.

The Soil Preferences

The soil should be deep and moist, the red raspberries doing best on the lighter loams, the blacks on the heavier loams. The red raspberry is more hardy than the black and can be grown as far north as the Yukon.

The wild raspberry indicates to us what the requirements are, a soil rich in humus. The plant usually grows in the fence row where the humus content is highest. The land should be well prepared before planting. The strongest plants are the best. This statement means that the man who has the nerve to throw away two out of every three plants, using only the strongest and best rooted will make money thereby.

The common distance to plant the red and purple varieties is in rows 6 or 7-feet wide, with plants 2 to 3-feet apart in the rows. Some of the purple and all of the black raspberries are usually given more space, with rows up to 9-feet wide. In a farm garden, it is best to give plenty of room and cultivate with a horse. Where the garden is small, raspberries may be planted along the fence of same and given less room.

It is a strong grower, the fruit is large, the plant productive. At Webster, N. Y., one grower has secured 4,000 quarts an acre. Previous to the war, he paid 2 cents a quart for picking and a good picker takes off 100 quarts a day. The patch is picked four times.

A normal yield is from 1,600 to 2,400 quarts for the black raspberry and 1,400 to 2,000 quarts an acre for the

red. Shaffer's Colossal, a purple, is also highly regarded. New varieties are constantly being developed and many of these have very excellent features. However, it takes time to determine how really permanent these good qualities are. For that reason the main portion of the berry patch should be set to old, tried and proven varieties.

CURRENTS PAY WELL

R. C. GROVES

The currant is one of the least grown and probably most neglected bush fruit, largely because it is seldom eaten fresh. Nevertheless I find it a profitable crop, as there is always a lively demand for the berries for making jellies, jams, pies, and wines. While the currant will respond as well as any other fruit to the highest cultivation, it will thrive under greater neglect, and is less particular in its demands for attention at the critical moment. One can extend the picking season over a period of six weeks and the pruning season six months. During July, August and September, hardly a shrub surpasses the currant in beauty. It is good for a crop every year for ten or fifteen years.

One would ordinarily be successful in growing it among grape vines and as a filler for orchards between rows of trees, but not between trees in the rows. The shade will not hurt them, but they could not be expected to survive in the struggle for plant food with the tree. It does best upon a rich, cool and moist soil, not one poorly drained, and therefore cold and wet. A Northern or Western exposure is best. The currant is hardy and will stand any amount of cold weather without appreciable injury, in fact, better than it will stand too much heat. Planting may be done either in spring or fall. I prefer to set one-year old plants as I think one can form the heads a little better. I try to make it into bush form, by cutting it back until I get a half dozen branches.

Laying Out the Patch

If it is planned to cultivate both ways they would be set out 5 x 5 feet. The ground should be well cultivated before planting and plants set fairly deep. After the first year, the plant should not be cultivated too deep, as the roots tend to grow near the surface and deep cultivation will cut them off. The necessary moisture may be maintained by continual cultivation or by mulching. Cultivation will probably come nearer keeping out diseases and insects and encroaching of weeds than a mulch. Ashes, sawdust, straw and manure are used for mulching, applied to a depth of several inches. The best method of mulching is to confine the application to the hills, or the row, where the continuous row is used. The space between the rows is then kept cultivated.

In pruning I remove branches over three-years old, thin the bush to admit sunlight and air, and to head in long irregular growing branches. It is best to do the pruning in the spring, although if necessary it may be done in the fall.

There are three distinct types of currants, red, white and black. The red is the most popular type, but the gardener who caters to the different tastes of his customers should grow several varieties, for no one variety combines all the desirable qualities. Thus the Red Dutch far surpasses all others for making jelly, but it is a poor dessert currant, and on account of small size it is one of the poorest for marketing. On the other hand the Red Cross is one of the best for marketing, excellent for dessert, but it makes a very poor quality jelly. The white grape is most remarkable for its enormous clusters of beautiful fruit and surpasses all others as a dessert currant, but it is not in high esteem as a market currant. Black currants are almost unknown on the market, and have a peculiar objectionable flavor, which may be removed, however, by scalding in boiling water.

Do your crops bring top prices?

The best grades of any crop fetch the big prices. Intelligent use of commercial fertilizer will not only increase your yield per acre, but will better the grade. For instance, the Ohio Experiment Station found a yield of 8.4 bushels of wheat, with 49% shrunken kernels when no commercial fertilizer was used, while the yield was 28.33 bushels with only 16% shrunken when a reasonable amount of fertilizer was applied. Potatoes are larger and more mealy, and corn is better filled out and the kernels larger, when suitable commercial fertilizer is added. Royster's fertilizers represent 40 years experience in furnishing properly balanced plant food for the various crops. They merit your confidence. It will pay you to learn the true story of fertilizer. Write freely to F. S. Royster Guano Co., Baltimore, Md.

4 TIMES Around the World with ONE OILING 100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The Auto-oiled Aermotor after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting wind-mill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

For full information write **AERMOTOR CO.** Chicago, Kansas City, Dallas, Des Moines, Minneapolis, Oakland

Try This Concrete Mixer

POST yourself—investigate—find out now about this handy concrete mixer for farm use. Before you go through the drudgery of mixing concrete with a shovel, send for a Kwik-Mix on 30 Days Free Trial. Mixing concrete with a Kwik-Mix is so simple, easy and cheap you can afford many improvements on your farm. Our 100-page free book shows complete plans for water troughs, fence posts, feeding floors, garages, storage cellars, etc. Tells how to do concreting yourself, saving contractors' profits. You can also make big money concreting for neighbors in spare time.

Paints and Brushes

Pennies Invested Yield Dollars in Appearances

TWO first-class reasons for using paint are, first, that it is a splendid preservative, and second, it is a great factor in improving the appearance of anything to which it is applied. With the present high price of wood, and the difficulty of obtaining it, behooves the owner of buildings, if he is possessed of business sense and shrewdness, to keep his buildings well painted. In spite of the fact that paint is the best life insurance for wood and often for metals, one can see from one end of the country to the other farmstead after farmstead dilapidated in appearance, and machine after machine succumbing to rust.

The expert painter is presumed to know everything connected with the subject of paint, from its composition and manufacture to the best methods of application to all kinds of wood under every varying condition. Such proficiency is commendable in one who makes painting his business, but an ordinary person should be satisfied to know how to take care of his brush, what kind of paint to use, how and when to apply it.

The Care of the Brush

Brushes and their care are really worthy of very careful consideration. The man who sells brushes will tell you that good brushes are very hard to obtain. You will find out for yourself, when you come to buy them, that they are quite expensive. The amateur painter need not buy an expensive outfit to handle his job, however, for about all that he needs, other than the brush, is the paint, its container and a ladder high enough to reach the highest point to be painted. Consequently one can buy good brushes with a clear conscience.

The best brushes have bristles 5 or 6-inches long, which of course is really longer than is necessary, but the ends will gradually wear off as the brush is used. In order to protect the base of the bristles, when the brush is new, it should be "bridled," or wound with stout cord as far from the base as necessary, securing the ends of the cord by tacking to the brush head. For painting small surfaces such as window sash, narrow trim, and the like, a small-round brush is used about one-inch in diameter, with chisel point. Special brushes are used for varnish; these are oval or flat and are narrower and shorter than regular paint brushes. Whitewash and calcimine brushes are made 7 or 8-inches wide in order to do rapid work, for these coatings are not to be worked into the wood, but are simply laid over the surface.

Some brushes have the bristles set in glue, others in cement, and still others, of the best manufacture, in rubber. Glue set brushes of course should never be left standing in water, nor should the cement set brushes be placed in a mixture containing alcohol, such as shellac. Glue set brushes are used in shellac or varnish, while paint brushes are usually cement or rubber set.

To Get the Most Out of a Brush

In order to get the best efficiency out of a brush it should be kept absolutely clean when not being used. For an over-night interval a complete cleaning out of the brush is not necessary. All that is required is to wrap the brush with several layers of thick paper or place it in water so as to keep the paint from drying out. To clean the brush thoroughly, kerosene should be used, after which it is dipped in gasoline or benzine, then the brush is washed with soap and water and well shaken out to remove as much water as possible, after which it is put in a place where it will dry and collect no dust. If a good brush has been allowed to dry full of paint, it can be cleaned fairly well by soaking the bristles for a day or two in a paste made of water and washing powder, and then rinsing it well in clear hot water. Sometimes just as good a job can be done by soaking it in turpentine or dilute ammonia for several hours, then washing thoroughly in soap suds.

The bristles of a new brush should not be wetted before using. However, it is desirable to swell the head by placing the brush, handle down, in water deep enough to cover a point just below where the bristles emerge from the binding. No bristle brush should ever be used in a solution containing lime, for it is very destructive. Every new brush will shed a few bristles, but generally these are loose ones which have not been well bound in, but if the shedding continues, a very little hot water poured into the middle of the bristles will cause the head to swell and bind the bristles in.

Shall I Buy or Mix?

The question is very often asked—"Is it cheaper to buy ready mixed paint or to buy the materials and do your own mixing?" The chief disadvantage in home mixing of paints is the work involved because if the paints are to be good they must be very thoroughly mixed, and the hand mixing is very arduous.

Perhaps the paint that is most commonly made at home, is the ordinary white paint used on dwellings. It is a mixture of a white pigment, usually white lead or zinc, or a combination of the two, with linseed oil. By including various pigments, in different proportions, an almost infinite variety of colors can be secured.

The most common vehicle used in the manufacture of paints is linseed oil, and it may be either raw or boiled. Boiled oil dries rather quickly, which makes it advantageous for use in outside work. For the interior, raw oil is more suitable, though it takes two or three times as long for it to dry as the boiled oil. When linseed oil is spread out in a thin layer it gradually hardens and a thin film first forms on the outside, which thickens until a firm layer of varnish-like material finally develops. In this it is different from most other oils, which either disappear or form sticky coatings. This hardening quality, possessed by linseed oil to a great degree, and to a less degree by a few other oils, is known as drying. It is not drying in the sense of water drying by evaporation, but instead is an oxidation or absorption of oxygen, and is a real chemical change rather than a physical one. Certain materials will hasten drying and these may be added to the paint when it is desired to get quicker results. Not more than 10 per cent of dryer should be added, however.

Making the Application

In painting new wood, several coats should be applied, the first called the priming coat, consisting usually of equal volumes of linseed oil and white lead, with a little dryer. Some wood, such as cypress or hard pine, contains a resinous material which prevents the paint from sticking readily. To obviate this difficulty, a little turpentine or benzine is mixed with the paint to cut the resin. The wood, of course, should be dry because if it contains an undue amount of moisture it will boil out and cause the paint to blister or scale off. After the priming coat has been applied, all knots and sap spots should be covered with shellac so that the subsequent coat will adhere well. On new work at least two more coats should be applied. On old work, it is pretty difficult to get a good job done with a single coat; two coats are much better and will last more than twice as long as a single coat.

The value of an occasional coat of paint applied to farm machinery is too often overlooked. Painting metal is not difficult except in the case of tin or galvanized iron, both of which materials are manufactured in such a way as to leave a greasy coat upon them, which prevents the paint from adhering. Scrubbing the surface with hot water and soap or with benzine or gasoline will remove this grease, but it should be dried well before paint is applied. When ordinary farm machinery is to be painted they should be very thoroughly gone over so as to remove every trace of oil, grease or rust, if necessary scraping down to the

You can be quickly cured, if you

No Other Mixer Like It

a Batch a Minute

As pioneer mixer manufacturers we have developed two features that put the Gilson Mixer in a class of its own. It is the only mixer with Patented Reverse Unloading Gear and Curved Mixing Blades, insuring thorough mixing in shortest time. Loads on one side, dumps on the other side.

Gilson 30 Days FREE Easy Terms

Due to the special Curved Mixing Blades the Gilson thoroughly mixes in $\frac{1}{2}$ the time required by the ordinary type of mixer. Handles $2\frac{1}{2}$ to 3 cubic feet of concrete at one time at the rate of one batch per minute. Turns out 34 cubic yards in ten hours. Mixes perfectly concrete, mortar or plaster. Any 1 H. P. Engine turns it easily.

Only \$43.50 DIRECT TO YOU

The lowest priced, practical, improved mixer made. Built of iron and steel—lasts a lifetime. Ideal for farmer or contractor. Mixes concrete that requires no replacements, no repairs. Use this mixer 30 days at our risk. We guarantee it exactly as represented. Send your name today and get full description of this, the only Reverse Unloading Gear Mixer, and easy payment plan.

bare metal with scrapers or a wire brush; extra pains taken in this process will be well repaid.

Many people think that it does not pay to paint, but it is just as profitable as washing one's face; do not be afraid to paint; do not be afraid of paint. There is such a thing as lead poisoning, but instances of farmers becoming afflicted with it are extremely rare. Paint is a good thing on farms, and an investment in it is sure to bring good returns.

PREVENTING THE BLISTERING AND SCALING OF PAINT

We have a house which has been built about 25 years. It has always been painted in good shape, but the paint has always scaled off after a year or so. Two years ago it was scraped and extra pains taken in painting, but now the paint is coming off. It raises up in big blisters and peels off. Ready mixed paints and also lead and oil have been used but with the same results. Can you suggest a remedy for this trouble?—R. E. A., Pennsylvania.

It is sometimes a little hard to tell just what causes paint to scale off. It may be the quality of the paint itself, but if you have always had this trouble with paint, it would seem that something else was the matter. It may be that the wood is unusually porous, and that it absorbs the oil so fast out of the paint that it does not have a chance to dry properly. This absorption would leave an undue amount of pigment on the surface, and if deprived of its carrier would naturally scale and crack. A remedy for this would be to put on a priming coat of almost pure oil, with just a little pigment in it, and let this fill up the pores.

I note that you mention the big blisters. Blisters are usually caused either by moisture in the wood, which has been painted while it is still damp. The sun's heat also causes formation of steam, and the steam rises and will cause the blisters. It also sometimes happens that paint itself is very slow drying, and will blister in very hot weather. The remedy for this is to put more dryer in the paint.

INSTALLING LIGHTNING RODS

A lightning-rod agent is in this district. I have just erected a new barn and of course he is anxious to rod it. Will you tell me candidly, are they any good? Opinions vary. Some farmers think they are all right, while others think they are useless. Kindly give me your opinion on it.—(S. P., New York).

Lightning rods were once the object of many jokes, but the old lightning rod joke is out of date, for properly installed rods have been proven a great protection from electric storms. However, if they are not correctly installed, they are worse than useless according to the rural engineers of various state colleges. When the installation is properly made, lightning rods are almost 100 per cent protection.

It is true that in years past the lightning rod agent was classified with the gold brick salesman. However, to-day manufacturers of lightning rods are giving a thoroughly reliable product, providing the rods are installed properly. Rods should not be insulated from the building by glass or porcelain. They should be attached directly to the buildings with clamps or special fasteners. Conductivity is the most important factor in the choice of materials. Copper is the most satisfactory in this respect, although some rods are made of iron and others of aluminum. Braided copper is of more value than the same weight metal in the solid rod.

In installing rods care must be exercised that there are no sharp turns or sudden curves in the conductors. The conductors must be grounded under several feet of soil where there is permanent moisture. Broken or disconnected conductors are a serious danger.

SICKLE BAR BREAKS

Why is it that the sickle bar on my mower is always breaking? It breaks just a few inches away from the ball and socket joint, where the pitman is attached.—P. T., Pennsylvania.

Probably the reason you are having trouble with the mower is that the machine is pretty badly worn, or that it is out of adjustment. If the machine is worn so that there is a sort of a flapping of the sickle bar, the vibration will cause a crystallization of the metal in the sickle bar, and sooner or later it will break.

"My Engine will do the work of 6"

Read the Amazing Facts about this Wonderful Farm Engine

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."

A. Y. EDWARDS.

Read What These Users Say

LIGHTING HOUSE, BARN AND GARAGE

"I want to tell you the Edwards is the smartest little engine that you ever hitched a belt to. I am running a seventy light, direct current generator to light the house, barn and garage, and as for general farm work you could not purchase a better one."—L. G. DAVIES, Plymouth, N. H.

BEST ENGINE EVER BUILT

"I do not hesitate to recommend the Edwards Engine for all general farm purposes from $1\frac{1}{2}$ to 6 H. P. I have tested it on feed grinding and sawing and it gives perfect satisfaction. It gives a steady flow of power, and it always starts. I think it is the best engine ever built."—WM. H. LUTZ, Sugar Grove, Ohio.

EASY TO MOVE—EASY TO RUN

"I run wood saws, cement mixers, threshing machines, etc. Let me tell you, it is the most wonderful engine I have ever seen or run. It is so easy to move around and so easy to run. I would not have any other engine. I would advise any farmer to buy the Edwards."—FRANK POELL, Cologne, N. J.

THE ONLY FARM ENGINE

"My Edwards Engine has proven most satisfactory. I have used it nearly every day for two years. Hot weather or cold, it starts easily and it has never once gone back on me or given the slightest trouble. I have given it hard use and it has never cost me one cent for repairs."—OTT FISHER, Leffel Lane, Springfield, Ohio.

WONDERFUL POWER

"We hitched the Edwards to a 30-inch saw and could not phase it. The next thing I hitched it to was a Sandwich four-hole corn sheller. The man that owned the sheller said that it was equal to steam for regular power. I would advise any farmer to buy an Edwards."—PARKER LIGHTY, Carlisle, Pa., R. D. 7.

PERFECT BALANCE

"Several of us were discussing the balance of the engine the other day and we picked up the Edwards Engine, while it was running and placed it across a trestle. It was not fastened or supported in any way, merely placed on the trestle which was only 3 inches wide. We had it running in this manner for about twenty minutes and changed the speed through the entire range—a truly wonderful demonstration of balance."—HARRY TEACH, Chief Inspector, The Edwards Motor Co.

Guaranteed For Life

EDWARDS FARM ENGINE

My engine—the Edwards Engine—will do the work of six ordinary farm engines. And I am willing to prove this to your entire satisfaction. I don't want you to risk a cent or to place yourself under any obligation.

No Other Engine Like It

For thirty years I have been designing and building engines of all types and sizes, from one horsepower to one thousand horsepower. Every working day of my life in business has been devoted to internal combustion engines. The farmer's power needs have been uppermost in my mind during these years. My experience on a farm proved to me just what kind of an engine a farmer needs. It was a problem that required a complete knowledge of what could be done or should not be done in building engines.

Six years ago the Edwards Farm Engine was put on the market, and today thousands of farmers who own Edwards Engines tell me that I have solved the problem of farm power. There is no other engine like it. It will do more for you than any other engine possibly could do.

6 Engines In 1

It is only one engine, yet it takes the place of six engines. It will give from $1\frac{1}{2}$ to 6 H. P. You can change power instantly while the engine is running. Change it as you need it.— $1\frac{1}{2}$ H. P. when you need $1\frac{1}{2}$, or 6 H. P. when you need 6. Or any power needed in between these two.

Wonderful Economy

Fuel consumption is always in proportion to the power used, and is remarkably low at all times. It burns kerosene or gasoline and will do the work at a fuel cost so low it will surprise you.

Easy to Operate

The Edwards Engine is so light that two men can carry it easily from job to job. Pick it up and set it down anywhere. It is so perfectly balanced that it requires no anchorage. This wonderful balance and smooth running also make for long life and durability. Easy starting, no cranking.

For Every Farm Job

The Edwards Engine will run a feed cutter, corn sheller, fanning mill, light plant, saw, washing machine, small silo filler, fodder cutter, pump, milking machine—these and many other pieces of power equipment on your farm. And it does each of these jobs economically with fuel consumption according to the load pulled—not another engine on the market can duplicate this guaranteed performance.

Prices Lower Than Before War

My prices today are lower than before the war. They offer you real economy in first cost as well as in operation.

FREE TRIAL

The Most Liberal Offer ever made by any Engine Manufacturer.

You can prove all my claims to your own satisfaction. I am willing to send you an Edwards Engine for absolutely free trial. I don't want you to send me one penny or to obligate yourself in any way. I just want you to take the engine and try it—use it for all of your farm work, put it on every job you can think of. After that, if you're not satisfied, you can return the engine to me without the payment of a single cent.

Free Book

Without any obligation to you, I will send you a free booklet describing the Edwards Engine in detail, giving proof of every claim I make and telling you all about my Free Trial Offer. Just fill in and mail the coupon.

High Analysis Fertilizers Give Most Value For Money

And the Same Principle Applies to Seed Purchasers

MARKED progress has recently been made in the development of mixed fertilizers of high analysis. For a great many years mixed fertilizers of extremely low analysis, such as 1-8-1, 2-8-2 and other formulas even lower have been offered for sale and their sale pushed vigorously by various fertilizer manufacturers. This was due in a large measure to a desire on the part of the farmer to limit his fertilizer expenditures as much as possible. Now, however, because of the activities of the departments of agronomy at the various agricultural colleges and determined efforts on the part of some of the more progressive organizations selling fertilizers, the practice of selling these low grade analyses has stopped to a certain degree.

Cooperatives Back High Analysis

A striking illustration of this development is the stand which has been taken by one of the large state-wide farmers' cooperative organizations which has refused to sell to the farmers of the states in which it operates any mixed goods formula containing less than a total of 16 units of plant food. This presents a two-fold advantage.

First—A considerable saving is effected in the freight because with a high analysis, more plant food is present in every ton of fertilizer, and freight is paid on plant food carrying material rather than useless material having no plant food value.

Second—Because of the concentration of the high analysis formula the application per acre need not be so heavy. For instance, if a farmer has been accustomed to using a 2-8-2 making an application of 300 pounds to the acre, he can now use a 3-12-3, which is in exactly the same proportion, and apply only 200 pounds per acre, securing exactly the same amount of plant food per acre that would be applied in the 300 pounds of 2-8-2. Thus it is possible

to eliminate the low grade mixture and save money by using two-thirds of the higher formula.

Fillers Reduced

Hand in hand with "high analysis" fertilizers are to be found "no filler" fertilizers. Here again, similar extravagant practices have developed. The farmer has used mixed fertilizers containing a considerable amount of "filler" or "make weight" which has no plant food value. It has been necessary to pay freight on this useless material from which no benefit could be derived. With the advent of the high analysis fertilizer, it has been possible to make nearly every formula without filler, thus making it possible for the buyer to purchase a ton of fertilizer and know that he is getting plant food carrying material in every pound of that ton.

It is necessary this year for the farmer to be more conservative than ever in making his fertilizer investment. He must get full value for money invested. One of the surest ways to accomplish this is to insist on "high analysis," "no filler" fertilizers.—W. L. GAY.

CHEAP SEEDS VERY COSTLY

Poor seed is responsible for a lot of losses and a lot of discouragement. There is little point in working a whole season to produce a crop only to have it result in failure because it did not get a good start. It ought to go without saying that cheap seed is dear at any price, and yet there are many farmers who annually save a few cents on their seed purchases and lose many dollars because of the unwise saving. Nothing that we have read in some time brings out this fact more clearly than a letter which we recently received from a large wholesaler in farm seeds. Because this writer is so absolutely right and the subject is so important we are publishing the letter for your benefit, hoping that it will make some difference in the quality of seed which farmers purchase for the coming season. The letter follows.—THE EDITORS.

From information gathered by our salesmen together with letters coming into the office combined with conversa-

tions I have personally had, it seems that the very large bulk of seed oats which are offered, are re-cleaned stock picked up of grain dealers. The retail trade generally are willing to pay only about eight to twelve cents per bushel more for seed oats than for feeding oats.

With many there seems to be a practice at this time of the year to get in a car of 34 to 38 pound oats which would be better than they usually bought and sell from this car for seed purposes, charging in many instances a dollar a bushel. Some of the parties doing this, run the oats over a cleaner before they put them out for seed. What they have left from the car they sell out for feeding purposes at no loss, while, on that sold for seed, approximately 40 cents per bushel will be made.

The Prices Go Up

Other dealers buy of parties who make a business of picking up good cars of No. 2 oats, and re-clean them, charging possibly from 10 to 15 cents per bushel over cost to them. Some of the dealers who are making a practice of re-cleaning these oats pay possibly 5 cents per bushel over the market for the ordinary run of oats, this being paid to assure offerings of attractive cars of oats when they come into the market.

After the farmer has put in the expense of preparing his soil and the expense of fertilizer, if he uses it, and after having the investment in his land and the crop to harvest, how can this be an economic proposition for him?

There are available pedigreed seed oats and pedigreed seed barley which have been introduced by different experiment stations and colleges after considerable expense and trouble. At least the farmer purchasing these, knows what he is getting and can determine in a series of years whether the variety is adaptable for his location. In purchasing pedigreed seed he

can know what happened to his crop if he has a failure and will not be working in the dark.

Why Pedigreed Seed Goes Slow

In approaching dealers relative to handling pedigreed seed, we find that in many cases they give as a reason that they have to extend credit for the seed, that they wish to have the least money possible invested in credits. Others state that farmers will not pay the difference and that any seed left on their hands, they cannot get their money back out of it.

If farmers would order their seed early and insist on pedigreed seed there is no doubt but what the dealers would stock pedigreed seed and I believe that we need the dealers in marketing seeds. At the present, however, the Plant Breeding Department of the N. Y. State College of Agriculture at Ithaca are issuing lists of recommended oats and barley, stating where they can be obtained.

Needs More Publicity

I feel that you can do the farmer a great service by putting in your paper at this time a strong article relative to pedigreed oats and barley as well as possibly certified seed potatoes. I do not doubt that it is ignorance on the part of the average dealer that he is offering to his clients the seed which he now is offering and there will be many cars of this seed distributed in New York State this year. Anything which you can do to change the demand and stop the flow into the east of the quality of seed oats and seed barley which are now being offered will be a great service to the farmers.

Just this morning I had a phone from a party who stated that he had an inquiry for Black Mill oats to sell for seed. As you doubtless know these are nothing but wild oats from the west.—M. C. RUMSEY.

What Is Wrong With The Country Church?

(Continued from page 185)

Christianity. The thinking of young people of many churches is estranged by ministers who insist on the theology of three hundred years ago and call modern science the deadly foe of religion.

5. Untrained and unqualified teachers in the Sunday Schools often give the pupil many misconceptions as to what Christianity is.

6. The failure of Christian parents to give religious instruction to their children. My experience has been that not over one in ten of the nominally Protestant children of this community receive any religious instructions outside of the Sunday School.

Outside of the Church I see several nation-wide social and economic movements that tend toward the same result:

1. The depopulation of rural districts. In this section at least, the movement cityward has drawn away a larger proportion of Christians than of those who have always been outside of the Church.

2. The increasing instability of rural communities. The tenant farmers and many of the village population rarely stay long in a place and take little interest in church and community.

3. The last and greatest cause of the decline of the church is the increasing prevalence of an idea, which often dignified by high-sounding names, is always found in a decadent civilization. Plainly stated, it is the idea that it is the business of each individual to seek his own greatest pleasure, to "express himself" regardless of his duties to society, regardless of how his conduct will affect his fellow man. To that idea can be largely attributed the declining number of marriages, race suicide, the great increase of divorce, the increase of dishonesty in public and private life, and the worship of success, however attained.

To combat that idea is the chief business of the church. For one holding that idea to profess Christianity is the height of hypocrisy and many such realizing this, banish the church from their lives.—ONTARIO FARMER.

Toleration Needed

Falling off in church attendance and interest in church work are due to various causes. In this inventive and progressive age, life is becoming more complex even in rural communities. This condition tends to divert attention from religious matters to those of a more secular nature. As parents became more indifferent and less exacting, children and other members of the family naturally follow an example which eventually becomes a fixed habit and which in turn is carried on, to a certain extent, to the next generation.

Many places are burdened with more denominational churches than they can afford properly to maintain, which is discouraging to recruits and even to older members. This condition tends to react in lowering the mental standard of the clergy in providing salaries hardly sufficient, in many cases, to meet living requirements.

Many of the occupants of the pulpit are too much confined to creed and to a rut in a stereotyped form of thought and preaching to satisfy the increasing desire for more liberal and enlightened instruction and guidance.

Again the ubiquitous automobile and greater variety and accessibility of amusements offer too tempting an opportunity for recreation and diversion from the labor of the week.

As a corrective of conditions mentioned there should be on the part of the clergy fairer and greater appreciation and understanding of scientific advancement and of knowledge in general, outside of their own special theological study; more sympathy and toleration for honest differences of opinion; in a word greater adaptability to present day thought and conditions, while relinquishing nothing in spirituality or high moral standard.

As to the members there should be a greater effort to practice what they preach; a broader spirit of cooperation and disregard of sectarian differences and further a better apportioning of church to the ability of the units concerned to adequately support them without the strenuous efforts and hardships now often endured.—W. E. STOVER, Chenango Co., N. Y.

Look for the RED LINE 'round the top

It stands to reason that fifty years' experience in rubber goods manufacture would produce something very unusual in the way of footwear.

And so it has—in "Hi-Press" and "Straight-Line." Millions of wearers are daily proving that fact.

Here your footwear dollars do double duty. You enjoy a service far beyond the ordinary run of rubber footwear.

Sixty-five thousand dealers are ready to serve you. This time demand "Hi-Press" Boots and Gaiters—with the Red Line 'round the top; and "Straight-Line" Rubbers, for the whole family.

Experiments are revealing startling facts about feeding yeast to poultry

An Announcement from the Fleischmann Company to the poultry raisers of America

In the past few years, Fleischmann's Yeast has restored new health and vigor to thousands of human beings.

It has helped to renew lagging energy and stimulate appetite—to build vitality and “tone up” the whole system. Every day brings added evidence of its effectiveness for man.

And now, after many experiments, the Fleischmann Company has developed a dry yeast for stock and poultry.

For some time, the Fleischmann Company has been conducting a series of tests in the feeding of this new Pure Dry Yeast to poultry, in many parts of the country. The re-

sults obtained are remarkable—so remarkable that we are anxious to tell the poultry raisers of America at once the details of this unique new development in poultry feeding:

Fertility 23% greater

—reports one of the largest hatcheries in the world.

Scientists have long known that the vital elements contained in yeast have a direct influence on the growth and activity of the reproductive organs in both male and female birds. Surprising

results are now being obtained by feeding Fleischmann's Pure Dry Yeast to the flock. A test in one of the world's largest hatcheries showed that only 5% of eggs from yeast-fed hens were infertile, as against 28% infertile eggs from hens not fed yeast in the mash. This means an increased fertility of 23%.

Less loss among chicks:

Chicks hatched from eggs from yeast-fed hens have more vigor and consequently fewer die. The death rate in one of the recent tests was 93 in a hatch of non-yeast fed chickens, and only 59 for chicks fed on mash containing Fleischmann's Pure Dry Yeast. Also, the yeast-fed chicks showed no diarrhea.

In a flock fed on Fleischmann's Pure Dry Yeast, whose age at present ranges from two to nine weeks, the death loss has been only 345 out of 6,000—less than 6 per cent. "And for general development," writes the raiser, "they surpass anything I have ever raised."

A tablespoonful daily to every 10 mature birds or every 50 chicks. For best results, feed in a wet mash, allowing the yeast to work in the mash for 12 hours before feeding. (It may also be fed in a dry mash.) Fleischmann's Pure Dry Yeast costs only 2 cents a tablespoonful.

Greater vitality and virility:

"Rations made up of grains, seeds, or their by-products are deficient," says an authority on scientific feeding, "unless they are properly supplemented with adequate proteins, minerals and vitamins." Fleischmann's Pure Dry Yeast contains an abundance of all three.

The owner of one of the largest ranches in America says, "I have never seen chicks feather so rapidly and develop such bone; this we attribute entirely to the addition of Fleischmann's Pure Dry Yeast, as all other conditions are practically the same as in preceding years."

You are being given the opportunity to prove for yourself, at the same time that experts are proving it in scientific feeding experiments, the value of Fleischmann's Pure Dry Yeast for your chickens.

We are now prepared to make immediate deliveries of Fleischmann's Pure Dry Yeast in 2½ pound cans, direct to you. One can should demonstrate its power in securing *more fertile eggs, with fewer chicks dying in the shell—stronger, more vigorous chicks—and faster-growing, huskier birds.* Mail the coupon today! It may revolutionize your poultry yard.

Pin a \$2 bill or money order to this coupon and mail it today. It will bring you a big 2½ pound can of Fleischmann's Pure Dry Yeast—enough to feed 10 birds for 3 months. We pay the postage.

THE FLEISCHMANN COMPANY,
Dept. D-4, 701 Washington Street,

How I Raise Baby Chicks

Factors That Bear on the Success of the Business

ANOTHER year has passed, and with

By C. S. GREENE

the opening of the spring season there arises in the heart of every real poultryman or woman a desire to see and own a flock of little chicks, and really there is no more beautiful sight on a farm than a flock of well-hatched, thrifty chicks as they scamper about the houses and yards or bask in the bright, warm rays of the glorious spring sunshine. Even on our general farms poultry is becoming more and more an important source of pleasure and profit when some one of the farmer's family takes an interest in the work keeping good, pure-bred stock and using modern methods of care and management.

In raising chicks, of course, the first consideration is to have good breeding stock and care for them in such a manner that the eggs will be fertile, and, with proper treatment, hatch strong, healthy chicks. We have found that feeding heavily of wet mash or green cut bone tends to lower the percentage of fertility. Too close confinement of the breeders is another common cause for infertility. Eggs laid by hens kept

easily acquired and very hard to control after a few nights, or even one night may be long enough to cause much damage to the chicks. The principal causes for crowding, are putting too many chicks in one brooder and insufficient heat. Many brooders are rated by the manufacturers to hold more chicks than they can accommodate successfully. As a rule, a medium-sized stove and hover will accommodate about 300 chicks. If the conditions are very favorable and the brooder is placed in a colony house at least 9 x 12 feet, as high as 400 chicks may be placed in it with good chances for success, but we do not approve of trying to raise any larger number in one brooder. This number must be decreased when the chicks are six weeks old or less, which is usually done by removing the broilers and fattening them up in separate quarters.

In cold weather, we start the brooders about two days before we put in the chicks, and heat them up to about 95 degrees F., with the thermometer near the edge of the hover and about two inches from the floor, as this is

Well grown, healthy, vigorous young stock means half the game in the poultry business

under artificial lights have hatched very unsatisfactory with us. So much so, that we would not hatch eggs from hens under lights except in extreme cases where no other eggs could be obtained, or when lights are used only a short time each morning or evening.

We do not say that it is impossible to obtain good fertile eggs from hens under lights, but we do say that on most farms where lights are used the fertility has been running very low.

After we have succeeded in getting good eggs, the incubation is a very simple operation, comparatively speaking, and the best advice we can give is to follow the incubator manufacturer's directions until some improvements can be suggested by experience.

Brooding an important Factor

A great deal depends upon the brooder when it comes to raising chicks successfully and the coal-heated colony brooder has been a great help to the commercial poultryman or anyone raising 300 or more chicks each season. It is the best method of brooding chicks that we have ever tried. A brooder should be selected which has automatic control of drafts by a sensitive thermostat, and there should be sufficient room in the stove for coal enough to last 24 hours at least. We prefer stoves with both top and bottom drafts regulated by the thermostats instead of top drafts only. This gives greater uniformity of heat with less danger of the fire going out in damp, muggy weather. No curtain is necessary around the hover if the brooder is placed in a colony house of the proper size. With the present shortage of coal fit to use in incubators and brooders, we may be compelled to use oil more and more for heating purposes.

Probably one of the greatest difficulties in raising chicks in brooders is their natural tendency to huddle or crowd when kept in fairly large-sized flocks. This danger is increased with the size of the flocks and must be avoided from the beginning, as the habit is

near the proper place for the chicks. Then, when the chicks are placed in the brooder, they will naturally furnish a little extra heat from their bodies, so the temperature will be about right.

Sand on Brooder House Floor

When the fire is started we place about two or three bushels of dry sand or earth on the floor around the stove, and let it warm up and dry out with the brooder. When thoroughly dry and warm, this sand is spread over the floor at least half an inch thick and covered with cut straw, or hay, or hayseed, which usually collect on the barn floor, where hay is kept and fed to cattle. The thickness of this hay or straw which covers the sand on the floor is from one to two inches, as it is very important that enough should be used to thoroughly cover the sand and that it should extend out from the brooder as far as the chicks are allowed to run.

At first, a wire fence about a foot high should be placed around the brooder about 18 inches from the hover to keep the chicks from wandering too far from the source of heat until they learn where to go when they get cold. This fence should be moved back gradually until the chicks are from one to two weeks old, when it can be removed entirely. When chicks are properly trained from the start, there is much less trouble with them later than when allowed to stand around and peep and bunch up in corners for the lack of attention on the part of the attendant. I believe that fully one-third of the troubles which usually come to a person who raises chicks artificially are caused either directly or indirectly by chilling, so the proper temperature of the brooder is of the utmost importance.

A brooder need not be located in a very large high room where there are drafts of cold air, as it is almost impossible to control the temperature of a large room in cold weather. The ideal place for a coal-burning colony brooder and 300 chicks is in a colony house

CATTLE BREEDERS

ULTRA FARM GUERNSEYS

Each of our three recent advertisements in the Agriculturist has sold a Guernsey. Only three animals left. A 4-months-old heifer at \$140; a bull ready for service at \$125 and a handsome bull calf at \$60. All three are rich in the blood of Ne Plus Ultra. Herd accredited. Write for pedigree and photographs.

Killed 200 Rats
At One Baiting

Dog, Ferret and Traps Failed—Amazing Virus Quickly Killed Them All. Not a Poison

"I was over-run with rats," writes H. O. Stenfort of Redford, Mich. "Seemed to be several hundred of them. Dog, Ferret and Traps failed. Was discouraged. Tried Imperial Virus and was rid of them all in a short time. Have found rat skeletons, large and small, all over the farm."

"The year previous Rats killed 200 out of 300 baby chicks. Last year saved them all. Will send for 10 bottles for neighbors, and we will clean up the whole neighborhood."

Rats, Mice, Gophers, in fact all Rodents, greedily eat Imperial Virus on bait. Sets up burning fever. Pests die outside hunting air and water. Harmless to humans, poultry, pets, stock, etc. Economical to use. Indorsed by Farm Bureau Experts and large, nationally known institutions everywhere.

You Can Get Yours Free

SEND NO MONEY. Write today to Imperial Laboratories, Dept. 1003, Kansas City, Mo., and they will mail you two regular \$1.00 bottles of Imperial Virus (double strength). Pay postman only \$1.00 and few cents postage on arrival. Use one yourself and sell the other to a neighbor, thus getting yours free. Readers risk no money, as Imperial Laboratories are fully responsible and will refund your \$1.00 on request any time within 30 days.

about 9 x 12 ft. and placed so that when the chicks are let out on warm days they will have a nice, clean grass range where no other chicks or fowls can interfere with their liberty and happiness.

Feeding the Third Factor

Most people seem to think that the feed is the principal part in raising young chicks, but it is really only one of three important factors—good chicks, comfortable quarters and proper feed—all three being of practically equal importance. A few years ago we were taught to fix up all sorts of mixtures as first feeds for young chicks, such as custard and johnny cake and boiled eggs and cracker and bread crumbs chopped up, and many things which make extra work just at a season of the year when poultrymen are busy and must economize time as much as possible. All of these nicknacks have therefore been discontinued, and we use a very simple ration which contains all the ingredients and nutrients which young chicks require for their proper growth and development, and which, for the most part, can be compounded and mixed in quantities so as to be easily accessible when required.

The chicks are left in the incubator until the morning of the 22d day, when they are removed to the brooder. No food is given until the chicks are about 48 hours old, or until they show signs of being real hungry. This is usually the afternoon of the same day that they are placed in the brooder, as many of the chicks are hatched on the 20th day and are therefore ready for their rations at this time. The first feed is simply oat flakes, such as are commonly sold for table use. Only one very light feed is given on the first day, and this is sprinkled on a shingle or paper where the chicks can get it easily, together with a mixture of fine grit, oyster shells and charcoal.

Milk Vital in the Ration

Milk in some form should be given the chicks as soon as they are placed in the brooders. We prefer skimmed milk direct from the separator and fed sweet in regular water fountains so the chicks cannot get wet. If sweet milk is not available, moderately sour milk is the next best, but whichever is used at first should be continued instead of changing from one to the other, and the fountains should be washed and scalded every day.

For dry mash, we use a good chick-starting feed with buttermilk. There are several good commercial mixtures on the market at the present time. This is kept before the chicks in small hoppers or troughs until they are six or eight weeks old, when the mash is gradually changed to the following mixture: 200 lbs. wheat bran, 100 lbs. white wheat middlings, 100 lbs. corn meal, 100 lbs. oat flake, ground fine, 25 lbs. fine beef scrap, 25 lbs. dried buttermilk, 25 lbs. bone meal, 10 lbs. fine charcoal. This will make a suitable mash for the chicks until they are four months old or more and ready to take nearly the same rations as the laying stock.

We start feeding fine scratch feed about the end of the third day, and no definite rule is followed for this except to feed just enough to keep the chicks fairly busy most of the time during the day, while the heaviest feed is always given at night about an hour before dark. This scratch feed is the common commercial mixture of finely cracked grains. Where large quantities are used it is sometimes desirable to make a home-made mixture of equal parts cracked wheat, pinhead oat meal and finely cracked corn. This mixture is fed twice or three times a day until the chicks are old enough to eat whole wheat and larger cracked corn, when they are changed very gradually to an intermediate scratch feed.

Green feed should be supplied regularly. Nothing is better than a clover or alfalfa range in summer, but in cold weather we have found nothing better than sprouted oats, beginning to feed them the sixth or seventh day. During warm weather, some shade is necessary, and for this purpose a cornfield near the colony houses furnishes almost ideal conditions. White Leghorn chicks raised by this method should be ready for broilers at nine weeks of age, averaging about three pounds per pair, while the pullets should start laying at about five months of age and return a good profit on the investment.

DE LAVAL
CREAM SEPARATOR
PRICES

A word about De Laval Cream Separator prices to prospective 1923 purchasers is pertinent at this time.

De Laval prices were reduced last year to practically the pre-war level, allowing for increased capacity and other improvements made meanwhile.

This reduction was made in anticipation of a further reduction in labor and material costs. The reverse has happened. Labor and material costs are going up rather than down.

If they continue to do so De Laval prices will have to be advanced. They are now too low. The economies possible through greatly increased production can alone permit of their remaining so.

In any event, De Laval prices cannot be reduced. They may easily have to be advanced at any time. The safe thing to do is to buy now and take no chances.

This is the more so by reason of the fact that 1923 De Laval machines are even better than ever before, that dairying was never more profitable, and that no one having use for a cream separator could ever less afford to be without the best or to continue the use of an inferior or half-worn-out machine.

Why not see your local De Laval agent at once or write us direct at the nearest address given below?

The UDDER
-Keep it Healthy

IT'S the little sores and udder hurts that keep a cow nervous and irritable and make her hold back on the milk flow. Any form of injury or abnormal condition of the udder tissues makes a full yield impossible.

To avoid milk losses and make the milking easy, keep on hand always a package of BAG BALM—the great healing ointment, in the big 10-ounce package. For bruises, cuts, chaps, congested or hardened tissue, inflammation, etc., no other application can so quickly penetrate to the injured part and promote the healing process. Splendid for the treatment of Caked Bag, also valuable in cases of Bunches and Cow Pox.

A 60c package of Bag Balm goes a long way and is easy and pleasant to use. Sold by feed dealers, general stores and druggists. Sent direct if your dealer is not supplied.

Send the coupon below at once. Give your dealer's name, and we will mail you a sample of Bag Balm, worth 15c, absolutely free.

League Price for March

Farm News From New York and New Jersey

THE Dairymen's League Cooperative Association, Inc., has announced the following prices for the month of March, on the basic butter fat test of 3 per cent, in the 201-210 mile freight zone from New York City.

Class 1, for fluid consumption, \$2.80.
Class 2, for cream or ice cream, \$2.50.

Class 3-A, milk used chiefly in the manufacture of evaporated, condensed and powdered milk, a differential of 59 cents per hundred above the price paid for milk going into the manufacture of butter (in Class 4). For Class 3-B milk, used chiefly in the manufacture of hard cheese, a 40 per cent differential was voted above butter prices.

Class 4, milk used chiefly in the manufacture of butter and American cheese, prices to be determined by New York market quotations on these commodities.

These March prices are the same as February prices, except that there is a reduction of 10 cents per hundred on Class 1 milk. The February price was \$2.90 a hundred.

WESTERN NEW YORK NOTES

ALVAH H. PULVER

After a series of years replete with problems, the canneries of Western New York are preparing for a season when it is felt that more certainty will prevail in all the ramifications of the industry. Sugar and fuel shortages in the past have given much trouble, not to mention labor scarcity and the irregular supply of tins from time to time. Much of this bother is now in the past and while in some direction a sugar shortage is being talked about as one more thorn this year, the canners as a whole do not anticipate any great difficulty in getting ample supplies. The year opens auspiciously for the factories and considerable expansion is believed to be in store for various plants.

Definite announcement has been made that a large plant will be erected at Knowlesville, the project being fostered under the direction of the New York Canning Crops Co-operative Association. The Orleans county unit, including the associations at Medina, Albion and Knowlesville, has subscribed to enough stock to guarantee the success of the project. It is proposed to put up a \$75,000 building with additions to come later. All kinds of vegetables and fruits will be processed.

Potato Situation Bad in Steuben County

Growers of potatoes in Steuben county see little or no encouragement in the market situation with prevailing prices around 40 cents per bushel and dealers only luke warm at this figure. Many growers who put their crop in storage were certain of a substantial advance in the market during the winter. A rot has now developed, many growers losing heavily on the stored tubers. Potatoes that were dug early in the season have shown the most decay, and it is believed that they were infected when stored, and their blight later spread to the sound ones.

The government weather station at Ithaca has established a cooperative weather station at Sodus, placing it in charge of the writer. Daily records of temperature with maximum, minimum and mean records for the month and the precipitation from day to day will be recorded. From records of other stations in Western New York it was shown last year that considerably more precipitation was recorded in this section than in the extreme western counties of the state with a resultant heavier development of fungus troubles in Wayne and other counties than was experienced in Orleans and Niagara counties.

Nurserymen Hold Annual Meeting

At the annual meeting of the New York State Nurserymen's Association, held in Rochester, officers were elected for the year as follows: President, W. H. Masten, Newark; vice presidents, William Pitkin, F. T. Burke, Rochester; R. T. Brown, Queens; Frank Hartman, Dansville; and Paul V. Fortmiller, Newark; secretary and treasurer, Chas.

J. Maloy, Rochester; executive committee: Chas. H. Perkins, Newark; Horace Hooker and William Pitkin, Rochester, and John P. Rice, Geneva.

Chas. S. Wilson, prominent fruit grower of Hall, Monroe County, has been appointed to succeed the late J. B. Pease as President of the New York State Horticultural Society.

John D. Miller, Vice President of the Dairymen's League Cooperative Association, was elected President of the National Milk Producers' Association, at their recent meeting held in Washington, D. C. Mr. Miller succeeds Milo D. Campbell who resigned to accept President Harding's appointment to the Federal Reserve Board.

NEW YORK COUNTY NOTES

Ontario Co.—We are having a real old-fashioned winter. On January 30 the temperature hit 8 degrees below zero. All roads were filled with snow, making it hard for the mail man. There is an effort being made to open the roads for autos, which will be a hard thing to do. Some have been talking of widening sleighs to the same width as wagons, so that we could have sleighing and wheeling at the same time. Hens have been working too hard lately and have brought the prices down. Some folks are selling potatoes at 50c. Stock of all kinds is doing well. The health of folks in our section is generally good.—C. T. B.

Montgomery Co.—The weather thus far has nearly equaled that of '88. Farmers are making every effort to harvest ice. Thus far the quality has been poor owing to the depth of the snow. Very little hay is moving to market. The demand is very light. Milk prices are very good, but feeds are still high. Dairy butter to customers is 50c a pound. Beef has been plentiful at from 9 to 12c per pound by the quarter. Farmers have started to place their orders for grass seeds and fertilizers. Farm Bureau meetings held throughout the county are generally well attended.—G. P. V.

Dutchess Co.—Farmers are putting in 12 to 14-inch ice. Roads are being kept open for autos. Many farmers are killing their own beef. All available help is cutting cordwood, for which there is ready sale. It is practically impossible to get coal. Farmers' institutes have been very well attended.—H. J. H.

PROMINENT HOLSTEIN BREEDER DIES

John J. Walrath, East Springfield, N. Y., the well-known Holstein breeder and owner of the First Accredited Herd in Otsego County, died February 16. Mr. Walrath was a man of splendid character and a leader in his community.

TEACHERS' TENURE OF OFFICE ACT UP FOR HEARING IN NEW JERSEY

The Senate hearing on its bill No. 129, which would repeal the so-called Teachers' Tenure of Office Act, brought out a large delegation of farmers from central and southern New Jersey last week in support of the repeal. According to the law as it now stands, any teacher who has taught three successive years in any one place is exempt from discharge without cause. This means that a teacher must be brought up on charges to be dismissed, a method of removal often impossible and very unpopular in rural communities where the teacher's home may be in the community.

In rural schools, where funds are seldom available to attract the best teachers, it has been felt that the teachers' tenure of office prevents the efficient operation of the local school boards. The farm groups were represented by delegations from Monmouth, Gloucester, Hunterdon, Camden, Burlington and Mercer counties. The chief opposition came from the State Teachers' Association and some of the north-

eastern counties. A substitute measure has now been introduced which would make the tenure of office effective after five years.

Forest Fire Problems Discussed

At the recent sectional Inter-state Forest Fire Conference held in Trenton, N. J., State Forester C. P. Wilbur said that New Jersey loses \$40,000,000 annually through forest fires. This figure includes the loss through idleness of land, the cost of freight on imported timber and actual destruction of timber growth. The present estimated value of New Jersey forests is placed at \$25,000,000, whereas Mr. Wilbur claims the capitalized value would be \$200,000,000 in the forests were adequately protected.

The State Department of Conservation and Development is now operating on an appropriation of \$35,000. A sum of \$70,000 was asked for the coming year, which, if granted, the department estimates, would be an amount large enough to give protection to every section of the State. The farmers of Southern New Jersey are extremely anxious to get more fire protection for the cut-over lands adjacent to their farms.

Practical Farm Courses at College

Late winter and spring bee problems were being studied this week by a small group of beekeepers who gathered for an intensive course in bee husbandry at the New Jersey State College of Agriculture. Lectures and laboratory work in charge of Professor Hutson of the State Experiment Station, and E. G. Carr, bee specialist of the State Department of Agriculture, were scheduled in conjunction with the entomological work offered by other members of the college staff. Considerable interest is centering in the one-week tractor course at be held at the college farms at New Brunswick, N. J., during the week of March 5 to 10. Practical study of such problems as carburetors, aid cleaners, ignition, magnetos, tractor hitches, field operation and tractor selection are to be considered. The course is in charge of Edward R. Gross, Professor of Rural Engineering. The admission fee is \$3; registration is limited to 20 men.

Round about the State
